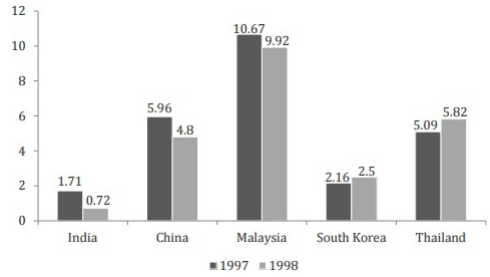
# 1 Analytical Aptitude: Data Interpretation (323)

## 1.1 Bar Graph (79) top

### 1.1.1 Bar Graph: CAT 2000 | Question: 146 top

**Answer the following question based on the information given below.**

FEI for a country in a year, is the ratio (expressed as a percentage) of its foreign equity inflows to its GDP. The following figure displays the FEIs for select Asian countries for the years 1997 and 1998.



The country with the largest change in FEI in 1998 relative to its FEI in 1997, is

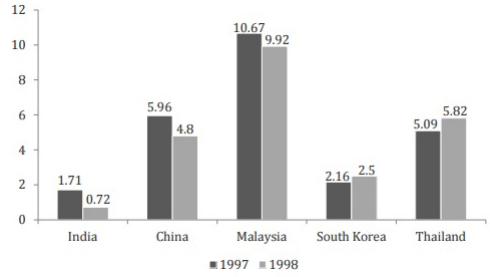
A. India B. China C. Malaysia D. Thailand

cat2000 data-interpretation bar-graph

### 1.1.2 Bar Graph: CAT 2000 | Question: 147 top

**Answer the following question based on the information given below.**

FEI for a country in a year, is the ratio (expressed as a percentage) of its foreign equity inflows to its GDP. The following figure displays the FEIs for select Asian countries for the years 1997 and 1998.



Based on the data provided, it can be concluded that

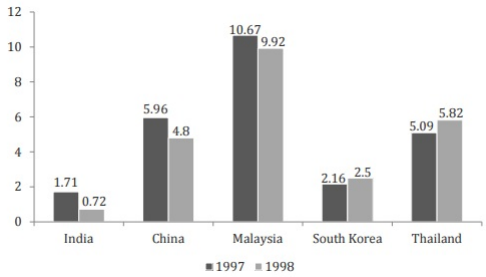
A. absolute value of foreign equity inflows in 1998 was higher than that in 1997 for both Thailand and South Korea.
B. absolute value of foreign equity inflows was higher in 1998 for Thailand and lower for China than the corresponding values in 1997.
C. absolute value of foreign equity inflows was lower in 1998 for both India and China than the corresponding value in 1997.
D. none of the above can be inferred.

cat2000 data-interpretation bar-graph

### 1.1.3 Bar Graph: CAT 2000 | Question: 148 top

**Answer the following question based on the information given below.**

FEI for a country in a year, is the ratio (expressed as a percentage) of its foreign equity inflows to its GDP. The following figure displays the FEIs for select Asian countries for the years 1997 and 1998.



It is known that China's GDP in 1998 was 7% higher than its value in 1997, while India's GDP grew by 2% during the same period. The GDP of South Korea, on the other hand, fell by 5%. Which of the following statements is/are true?

I. Foreign equity inflows to China were higher in 1998 than in 1997.
II. Foreign equity inflows to China were lower in 1998 than in 1997.
III. Foreign equity inflows to India were higher in 1998 than in 1997.
IV. Foreign equity inflows to South Korea decreased in 1998 relative to 1997.
V. Foreign equity inflows to South Korea increased in 1998 relative to 1997.

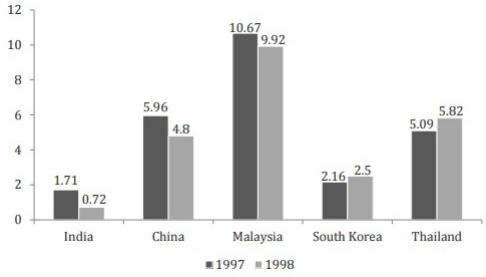
A. I, III and IV B. II, III and IV C. I, III and V D. II and v

cat2000 data-interpretation bar-graph

## 1.1.4 Bar Graph: CAT 2000 | Question: 149 top

**Answer the following question based on the information given below.**

FEI for a country in a year, is the ratio (expressed as a percentage) of its foreign equity inflows to its GDP. The following figure displays the FEIs for select Asian countries for the years 1997 and 1998.



China's foreign equity inflows in 1998 were 10 times that into India. It can be concluded that

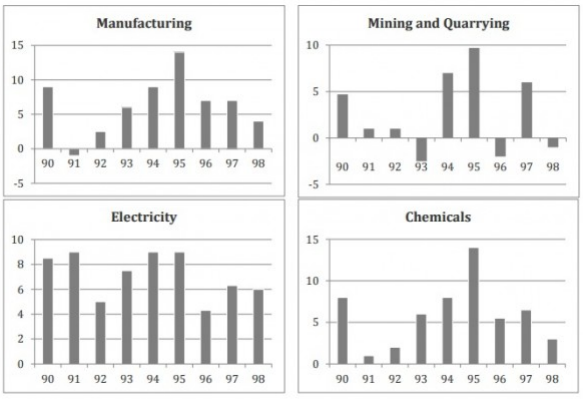
A. China's GDP in 1998 was 40% higher than that of India.
B. China's GDP in 1998 was 70% higher than that of India.
C. China's GDP in 1998 was 50% higher than that of India.
D. No inference can be drawn about relative magnitudes of China's and India's GDPs

cat2000 data-interpretation bar-graph

## 1.1.5 Bar Graph: CAT 2000 | Question: 154 top

**Answer the following question based on the information given below.**

The figures below present annual growth rate, expressed as the % change relative to the previous year, in four sectors of the economy of the Republic of Reposia during the 9 year period from 1990 to 1998. Assume that the index of production for each of the four sectors is set at 100 in 1989. Further, the four sectors manufacturing, mining and quarrying, electricity, and chemicals, respectively, constituted 20%, 15%, 10% and 15% of total industrial production in 1989.



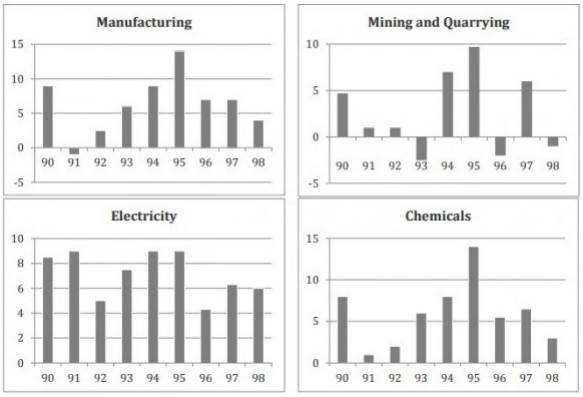
Which is the sector with the highest growth during the period 1989 and 1998?

A. Manufacturing B. Mining and quarrying C. Electricity D. Chemicals

cat2000 data-interpretation bar-graph

## 1.1.6 Bar Graph: CAT 2000 | Question: 155 top

**Answer the following question based on the information given below.**
The figures below present annual growth rate, expressed as the % change relative to the previous year, in four sectors of the economy of the Republic of Reposia during the 9 year period from 1990 to 1998. Assume that the index of production for each of the four sectors is set at 100 in 1989. Further, the four sectors manufacturing, mining and quarrying, electricity, and chemicals, respectively, constituted 20%, 15%, 10% and 15% of total industrial production in 1989.



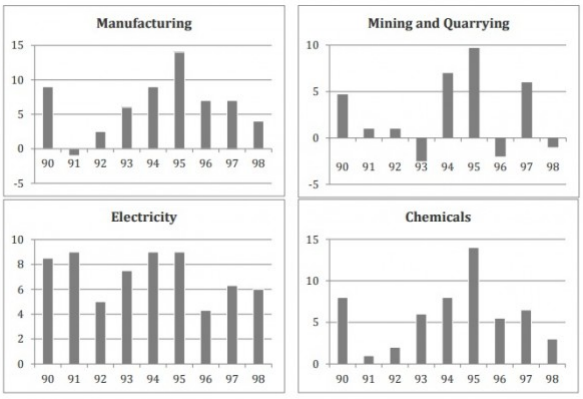
The overall growth rate in 1991 of the four sectors together is approximately

A. 10% B. 1% C. 2.5% D. 1.5%

cat2000 data-interpretation bar-graph

## 1.1.7 Bar Graph: CAT 2000 | Question: 156 top

**Answer the following question based on the information given below.**
The figures below present annual growth rate, expressed as the % change relative to the previous year, in four sectors of the economy of the Republic of Reposia during the 9 year period from 1990 to 1998. Assume that the index of production for each of the four sectors is set at 100 in 1989. Further, the four sectors manufacturing, mining and quarrying, electricity, and chemicals, respectively, constituted 20%, 15%, 10% and 15% of total industrial production in 1989.



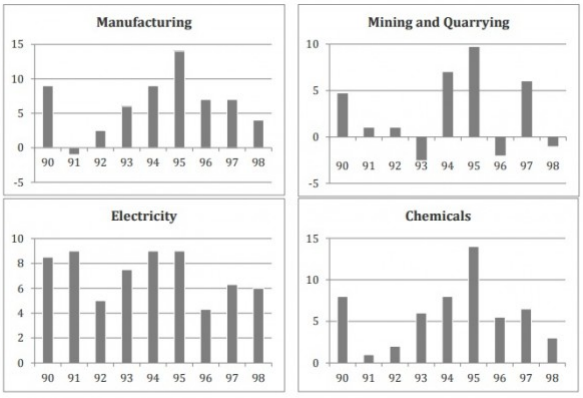
When was the highest level of production in the manufacturing sector achieved during the nine year period $1990 - 1998$?

A. 1998
B. 1995
C. 1990
D. Cannot be determined

cat2000 data-interpretation bar-graph

## 1.1.8 Bar Graph: CAT 2000 | Question: 157 top

**Answer the following question based on the information given below.**
The figures below present annual growth rate, expressed as the % change relative to the previous year, in four sectors of the economy of the Republic of Reposia during the 9 year period from 1990 to 1998. Assume that the index of production for each of the four sectors is set at 100 in 1989. Further, the four sectors manufacturing, mining and quarrying, electricity, and chemicals, respectively, constituted 20%, 15%, 10% and 15% of total industrial production in 1989.



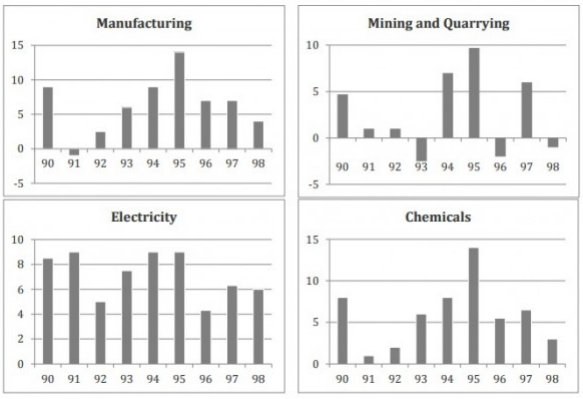
When was the lowest level of production of the mining and quarrying sector achieved during the nine year period $1990 - 1998$?

A. 1996
B. 1993
C. 1990
D. Cannot be determined

cat2000 data-interpretation bar-graph

## 1.1.9 Bar Graph: CAT 2000 | Question: 158 top

**Answer the following question based on the information given below.**
The figures below present annual growth rate, expressed as the % change relative to the previous year, in four sectors of the economy of the Republic of Reposia during the 9 year period from 1990 to 1998. Assume that the index of production for each of the four sectors is set at 100 in 1989. Further, the four sectors manufacturing, mining and quarrying, electricity, and chemicals, respectively, constituted 20%, 15%, 10% and 15% of total industrial production in 1989.



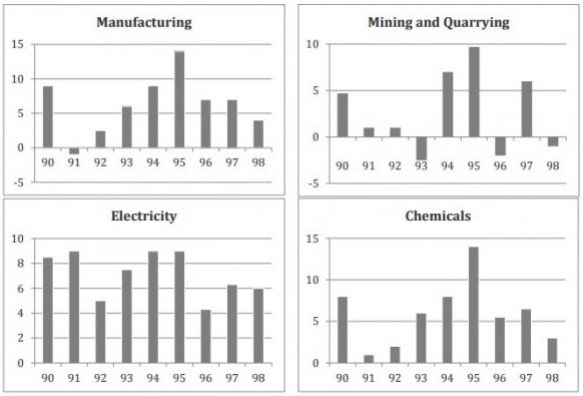
The percentage increase of production in the four sectors, namely, manufacturing, mining & quarrying, electricity and chemicals, taken together, in 1994, relative to 1989, is approximately

A. 25 B. 20 C. 50 D. 40

cat2000 data-interpretation bar-graph

## 1.1.10 Bar Graph: CAT 2000 | Question: 159 top

**Answer the following question based on the information given below.**
The figures below present annual growth rate, expressed as the % change relative to the previous year, in four sectors of the economy of the Republic of Reposia during the 9 year period from 1990 to 1998. Assume that the index of production for each of the four sectors is set at 100 in 1989. Further, the four sectors manufacturing, mining and quarrying, electricity, and chemicals, respectively, constituted 20%, 15%, 10% and 15% of total industrial production in 1989.



It is known that the index of total industrial production in 1994 was 50 percent more than that in 1989. Then, the percentage increase in production between 1989 and 1994 in sectors other than the four listed above is

A. 57.5 B. 87.5 C. 127.5 D. 47.5

cat2000 data-interpretation bar-graph

## 1.1.11 Bar Graph: CAT 2001 | Question: 109 top

Figure 1 shows the amount of work distribution, in man-hours, for a software between offshore and onsite activities. Figure 2 shows the estimated and actual work effort involved in the different offshore activities in the same company during the same period. [Note: Onsite refers to work performed at the customer's premise and offshore refers to work performed at the developer's premise.]

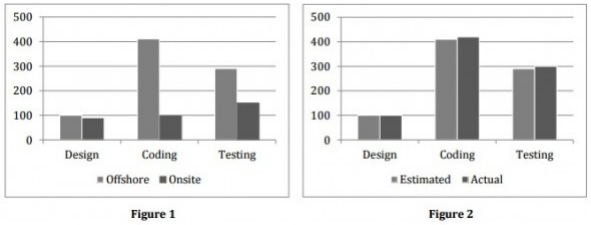


Figure 1 Figure 2

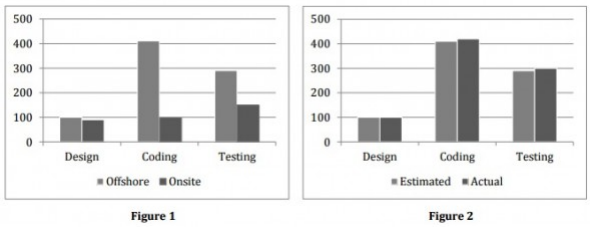
Which of the work requires as many man-hours as that spent in coding?

A. Offshore, design and coding
B. Offshore coding
C. Testing
D. Offshore, testing and coding

cat2001 data-interpretation bar-graph

## 1.1.12 Bar Graph: CAT 2001 | Question: 110 top

Figure 1 shows the amount of work distribution, in man-hours, for a software between offshore and onsite activities. Figure 2 shows the estimated and actual work effort involved in the different offshore activities in the same company during the same period. [Note: Onsite refers to work performed at the customer's premise and offshore refers to work performed at the developer's premise.]



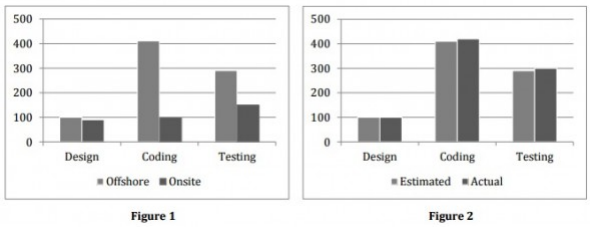
Roughly what percentage of the total work is carried out onsite?

A. 40 percent
B. 20 percent
C. 30 percent
D. 50 percent

cat2001 data-interpretation bar-graph

## 1.1.13 Bar Graph: CAT 2001 | Question: 111 top

Figure 1 shows the amount of work distribution, in man-hours, for a software between offshore and onsite activities. Figure 2 shows the estimated and actual work effort involved in the different offshore activities in the same company during the same period. [Note: Onsite refers to work performed at the customer's premise and offshore refers to work performed at the developer's premise.]



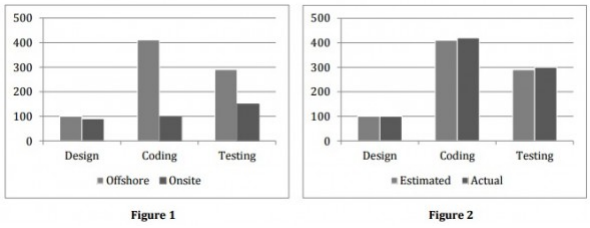
The total effort in man-hours spent onsite is nearest to which of the following?

A. The sum of the estimated and actual effort for offshore design
B. The estimated man-hours of offshore coding
C. The actual man-hours of offshore testing
D. Half of the man-hours of estimated offshore coding

cat2001 data-interpretation bar-graph

## 1.1.14 Bar Graph: CAT 2001 | Question: 112 top

Figure 1 shows the amount of work distribution, in man-hours, for a software between offshore and onsite activities. Figure 2 shows the estimated and actual work effort involved in the different offshore activities in the same company during the same period. [Note: Onsite refers to work performed at the customer's premise and offshore refers to work performed at the developer's premise.]



If the total working hours were 100, which of the following tasks will account for approximately 50 hours?

A. Coding
B. Design

C. Offshore testing

D. Offshore testing plus design

cat2001 data-interpretation bar-graph

## 1.1.15 Bar Graph: CAT 2001 | Question: 113 top

Figure 1 shows the amount of work distribution, in man-hours, for a software between offshore and onsite activities. Figure 2 shows the estimated and actual work effort involved in the different offshore activities in the same company during the same period. [Note: Onsite refers to work performed at the customer's premise and offshore refers to work performed at the developer's premise.]

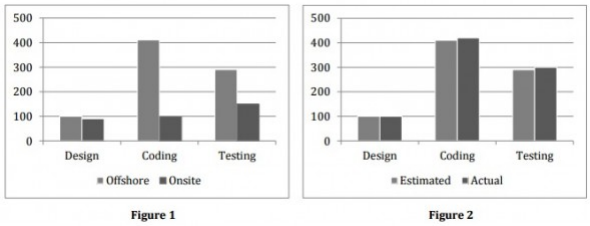


Figure 1 Figure 2

If 50 percent of the offshore work were to be carried out onsite, with the distribution of effort between the tasks remaining the same, the proportion of testing carried out offshore would be

A. 40 percent B. 30 percent C. 50 percent D. 70 percent

cat2001 data-interpretation bar-graph

## 1.1.16 Bar Graph: CAT 2001 | Question: 114 top

Figure 1 shows the amount of work distribution, in man-hours, for a software between offshore and onsite activities. Figure 2 shows the estimated and actual work effort involved in the different offshore activities in the same company during the same period. [Note: Onsite refers to work performed at the customer's premise and offshore refers to work performed at the developer's premise.]

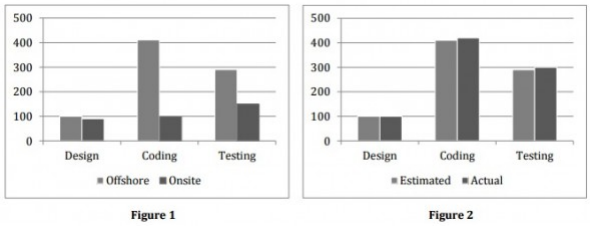

Figure 1 Figure 2

If 50 percent of the offshore work were to be carried out onsite, with the distribution of effort between the tasks remaining the same, which of the following is true of all work carried out onsite?

A. The amount of coding done is greater than that of testing
B. The amount of coding done onsite is less than that of design done onsite
C. The amount of design carried out onsite is greater than that of testing
D. The amount of testing carried out offshore is greater than that of total design

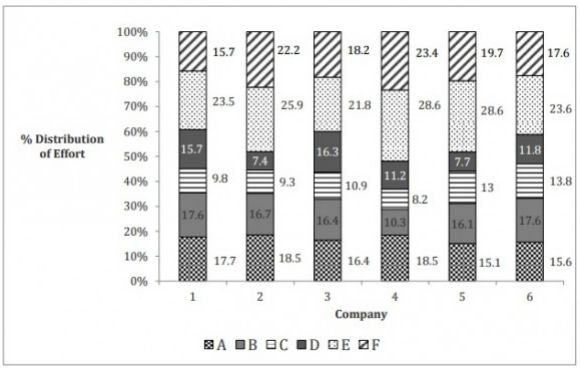
## 1.1.17 Bar Graph: CAT 2001 | Question: 118 top

There are six companies, 1 through 6. All of these companies use six operations, A through F. The following graph shows the distribution of efforts put in by each company in these six operations.



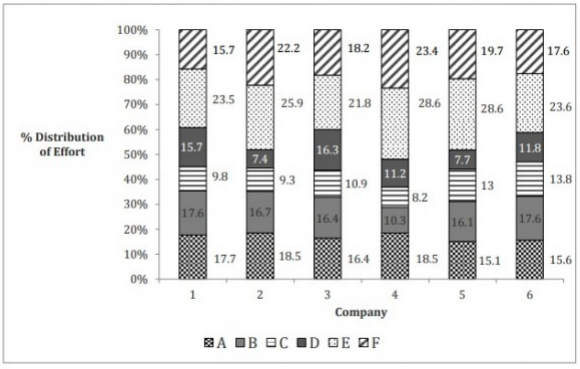
Suppose effort allocation is interchanged between operation B and C, then C and D, and then D and E. If companies are then ranked in ascending order of effort in E, what will be the rank of company 3?

A. 2 B. 3 C. 4 D. 5

cat2001 data-interpretation bar-graph

## 1.1.18 Bar Graph: CAT 2001 | Question: 119 top

There are six companies, 1 through 6. All of these companies use six operations, A through F. The following graph shows the distribution of efforts put in by each company in these six operations.



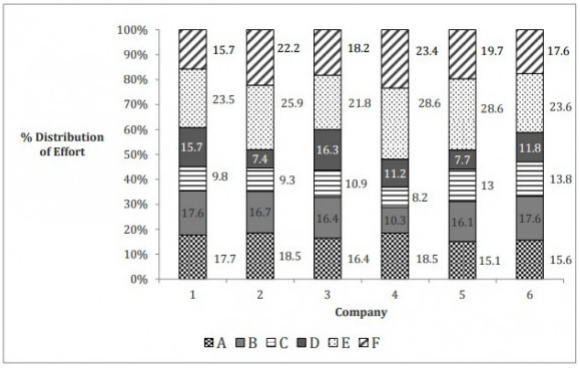
A new technology is introduced in company 4 such that the total efforts for operations B through F get evenly distributed among these. What is the change in the percentage of effort in operation E?

A. Reduction of 12.3
B. Increase of 12.3
C. Reduction of 5.6
D. Increase of 5.6

cat2001 data-interpretation bar-graph

## 1.1.19 Bar Graph: CAT 2001 | Question: 120 top

There are six companies, 1 through 6. All of these companies use six operations, A through F. The following graph shows the distribution of efforts put in by each company in these six operations.



Suppose the companies find that they can remove operations B, C and D and redistribute the effort released equally among the remaining operations. Then, which operation will show the maximum across all companies and all operations?

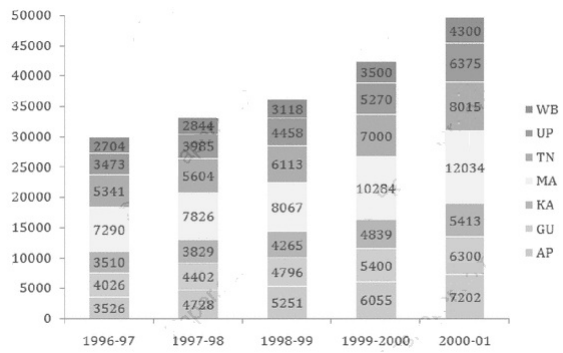
A. Operation E in company 1
B. Operation E in company 4
C. Operation F in company 5
D. Operation E in company 5

cat2001 data-interpretation bar-graph

## 1.1.20 Bar Graph: CAT 2002 | Question: 101 top

**Answer the question based on the chart given below.**

The chart below indicates the annual sales tax revenue collections (in crores of rupees) of seven states from 1996 to 2001.



If for each year, the states are ranked in terms of the descending order of sales tax collections, then how many states do not change the ranking more than once over the five years?

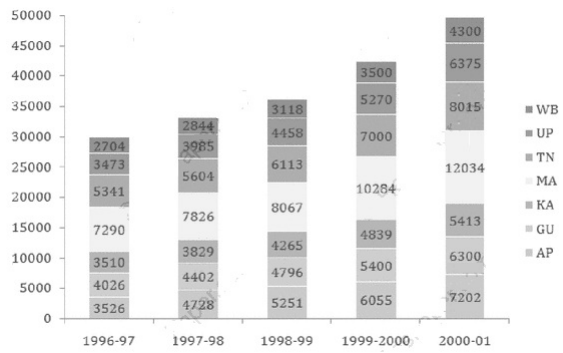
A. 1
B. 5
C. 3
D. 4

cat2002 data-interpretation bar-graph

## 1.1.21 Bar Graph: CAT 2002 | Question: 102 top

**Answer the question based on the chart given below.**

The chart below indicates the annual sales tax revenue collections (in crores of rupees) of seven states from 1996 to 2001.



Which of the following states has changed its relative ranking most number of times when you rank the states in terms of the descending volume of sales tax collections each year?

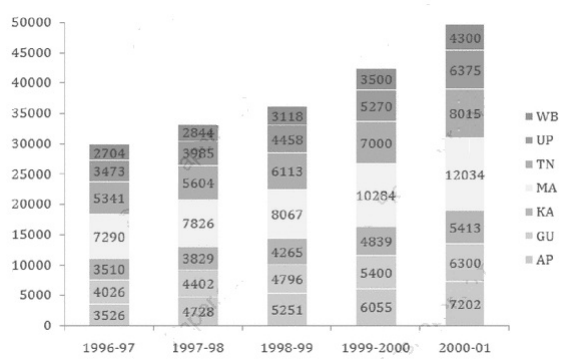
A. Andhra Pradesh
B. Uttar Pradesh
C. Karnataka
D. Tamilnadu

cat2002 data-interpretation bar-graph

## 1.1.22 Bar Graph: CAT 2002 | Question: 103 top

**Answer the question based on the chart given below.**

The chart below indicates the annual sales tax revenue collections (in crores of rupees) of seven states from 1996 to 2001.



The percentage share of sales tax revenue of which state has increased from 1997 to 2001?

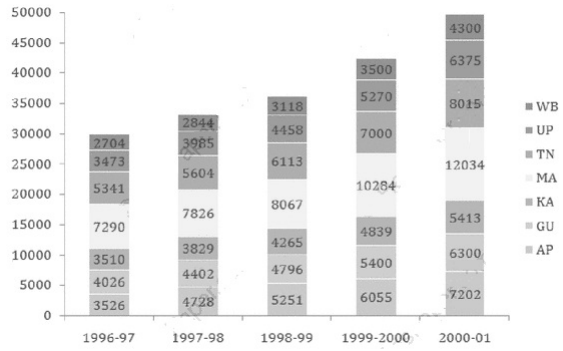
A. Tamilnadu B. Karnataka C. Gujarat D. Andhra Pradesh

cat2002 data-interpretation bar-graph

## 1.1.23 Bar Graph: CAT 2002 | Question: 104 top

**Answer the question based on the chart given below.**

The chart below indicates the annual sales tax revenue collections (in crores of rupees) of seven states from 1996 to 2001.



Which pair of successive years shows the maximum growth rate of tax revenue in Maharastra?

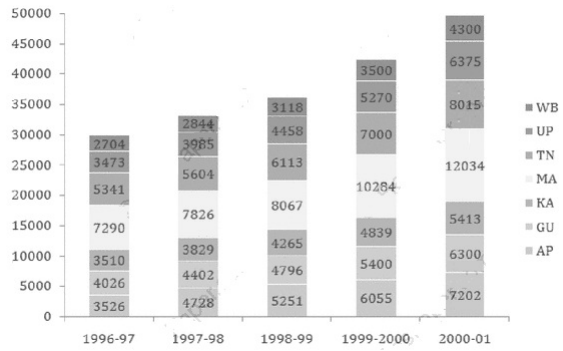
A. 1997 – 1998 B. 1998 – 1999 C. 1999 – 2000 D. 2000 – 2001

cat2002 data-interpretation bar-graph

## 1.1.24 Bar Graph: CAT 2002 | Question: 105 top

**Answer the question based on the chart given below.**

The chart below indicates the annual sales tax revenue collections (in crores of rupees) of seven states from 1996 to 2001.



Identify the state whose tax revenue increased exactly by the same amount in two successive pair of years?

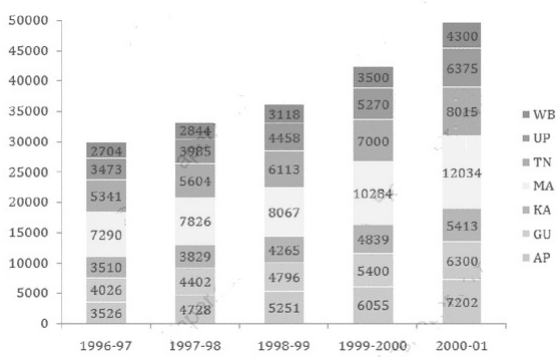
A. Karnataka B. West Bengal C. Uttar Pradesh D. Tamilnadu

cat2002 data-interpretation bar-graph

## 1.1.25 Bar Graph: CAT 2002 | Question: 106 top

**Answer the question based on the chart given below.**

The chart below indicates the annual sales tax revenue collections (in crores of rupees) of seven states from 1996 to 2001.



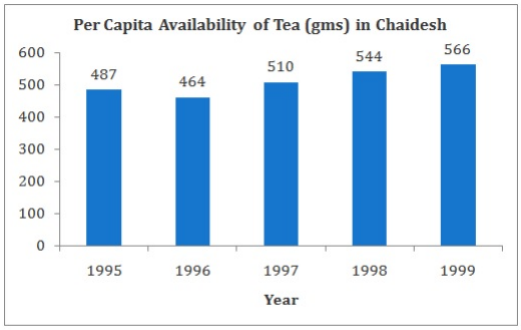
Which state below has been maintaining a constant rank over the years in terms of its contribution to the total tax collections?

A. Andhra Pradesh B. Karnataka C. Tamilnadu D. Uttar Pradesh

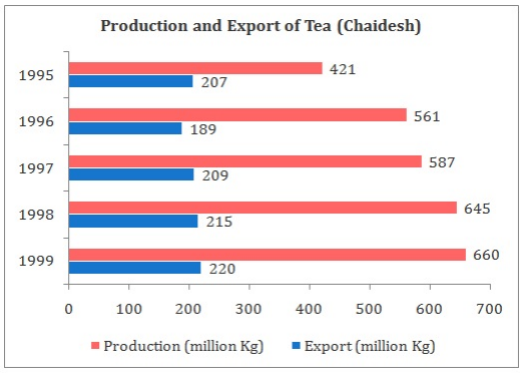
cat2002 data-interpretation bar-graph

## 1.1.26 Bar Graph: CAT 2003 | Question: 2-129 top

**Answer the question on the basis of the following table.**



(Note: Availability is defined as production less export.)



In which year during the period 1996 – 1999 was Chaidesh's export of tea, as a proportion of tea produced, the highest?

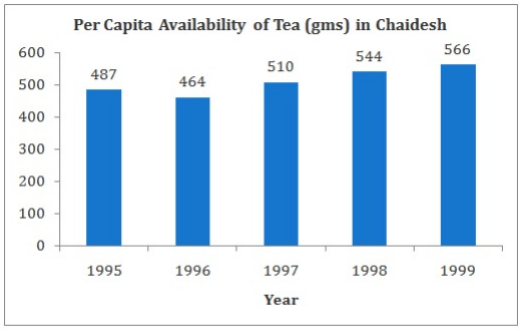
A. 1996 B. 1997 C. 1998 D. 1999

cat2003-2 data-interpretation bar-graph

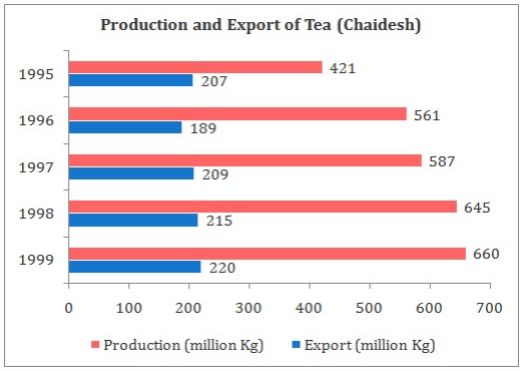
Answer key

## 1.1.27 Bar Graph: CAT 2003 | Question: 2-130 top

**Answer the question on the basis of the following table.**



(Note: Availability is defined as production less export.)



In which of the following years was the population of Chaidesh the lowest?

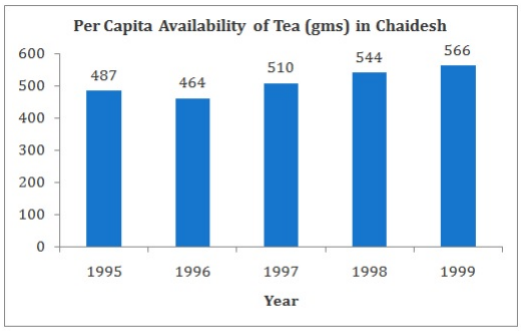
A. 1995 B. 1996 C. 1997 D. 1999

cat2003-2 data-interpretation bar-graph

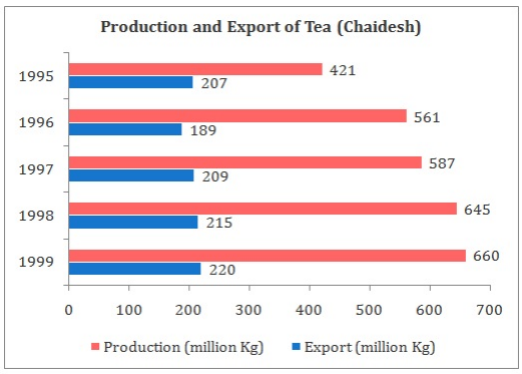
Answer key

## 1.1.28 Bar Graph: CAT 2003 | Question: 2-131 top

**Answer the question on the basis of the following table.**



(Note: Availability is defined as production less export.)



The area under tea cultivation continuously decreased in all four years from 1996 to 1999, by $10\%, 7\%, 4\%$ and $1\%$ respectively. In which year was tea productivity (production per unit of area) the highest?

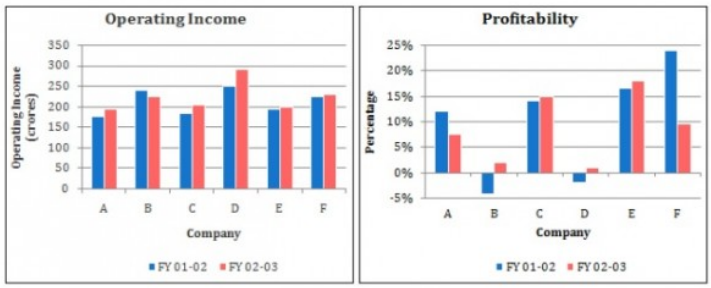
A. 1999 B. 1998 C. 1997 D. 1996

cat2003-2 data-interpretation bar-graph

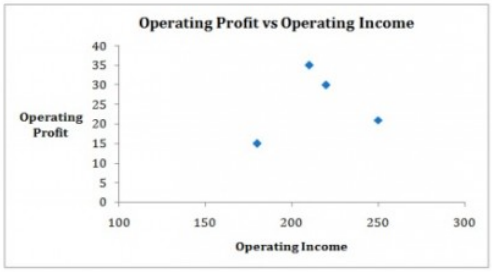
Answer key

## 1.1.29 Bar Graph: CAT 2003 | Question: 2-132 top

**Answer the question on the basis of following charts.**



**The operating profits of four of these companies are plotted against their respective operating income figures for the F.Y. 2002-03, in the third chart given below.**



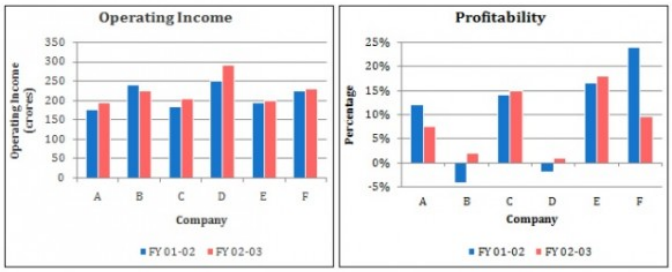
The profitability of a company is defined as the ratio of its operating profit to its operating income, typically expressed in percentage. The following two charts show the operating income as well as the profitability of six companies in the Financial Years (F.Y.s) $2001-02$ and $2002-03$.
What is the approximate average operating profit, in F.Y. $2001-2002$, of the two companies excluded from the third chart?

A. $-7.5$ crore
B. 3.5 crore
C. 25 crore
D. Cannot be determined

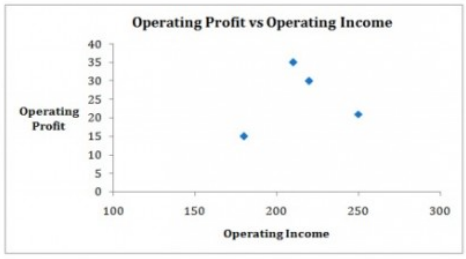
cat2003-2 data-interpretation bar-graph

## 1.1.30 Bar Graph: CAT 2003 | Question: 2-133 top

Answer the question on the basis of following charts.



The operating profits of four of these companies are plotted against their respective operating income figures for the F.Y. 2002-03, in the third chart given below.



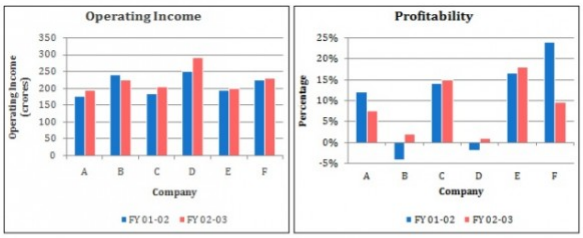
Which company recorded the highest operating profit in F.Y. $2002-03$?

A. A B. C C. E D. F

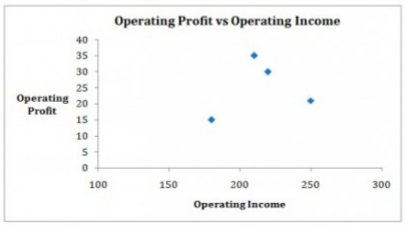
cat2003-2 data-interpretation bar-graph

## 1.1.31 Bar Graph: CAT 2003 | Question: 2-134 top

**Answer the question on the basis of following charts.**



The operating profits of four of these companies are plotted against their respective operating income figures for the F.Y. 2002-03, in the third chart given below.



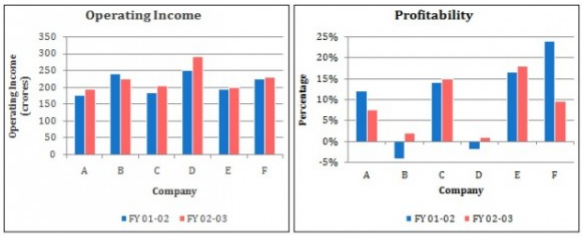
Which of the following statements is NOT true?

A. The company with the third lowest profitability in F.Y. $2001-02$ has the lowest operating income in F.Y. $2002-03$.
B. The company with the highest operating income in the two financial years combined has the lowest operating profit in F.Y. $2002-03$.
C. Companies with a higher operating income in F.Y. $2001-02$ than in F.Y. $2002-03$ have higher profitability in F.Y. $2002-03$ than in F.Y. $2001-02$.
D. Companies with profitability between $10\%$ and $20\%$ in F.Y. $2001-02$ also have operating incomes between $150$ crore and $200$ crore in F.Y. $2002-03$.

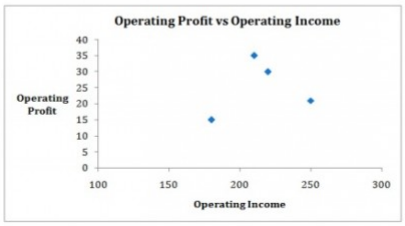
cat2003-2 data-interpretation bar-graph

## 1.1.32 Bar Graph: CAT 2003 | Question: 2-135 top

**Answer the question on the basis of following charts.**



The operating profits of four of these companies are plotted against their respective operating income figures for the F.Y. 2002-03, in the third chart given below.



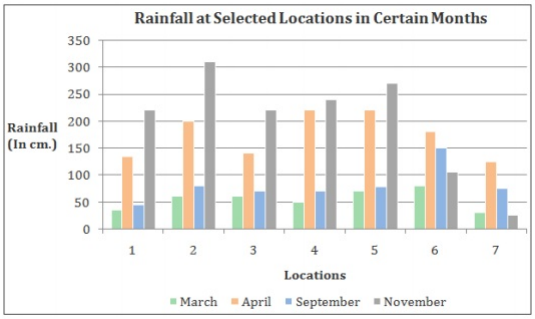
The average operating profit in F.Y. $2002-03$, of companies with profitability exceeding $10\%$ in F.Y. $2002-03$, is approximately

A. 17.5 crore B. 25 crore C. 27.5 crore D. 32.5 crore

cat2003-2 data-interpretation bar-graph

## 1.1.33 Bar Graph: CAT 2003 | Question: 2-136 top

**Answer the question on the basis of the data presented in the figure below.**



Which of the following statements is correct?

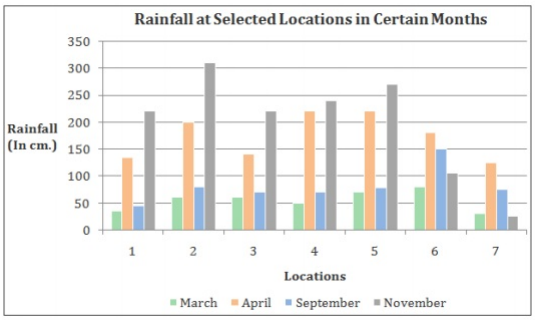
A. November rainfall exceeds $100$ cm in each location.
B. September rainfall exceeds $50$ cm in each location.
C. March rainfall is lower than September rainfall in each location.
D. None of the above.

cat2003-2 data-interpretation bar-graph

Answer key

## 1.1.34 Bar Graph: CAT 2003 | Question: 2-137 top

**Answer the question on the basis of the data presented in the figure below.**



Locations 6 and 7 differ from all the rest because only in these two locations,

A. April rainfall exceeds March rainfall.
B. Peak rainfall occurs in April.
C. November rainfall is lower than March rainfall.
D. April rainfall is less than 20 cm

cat2003-2 data-interpretation bar-graph

Answer key

## 1.1.35 Bar Graph: CAT 2003 | Question: 2-138 top

**Answer the question on the basis of following information.**

In a Decathlon, the events are 100 m, 400 m, 100 m hurdles, 1500 m, High jump, Pole vault, Long jump, Discus, Shot put and Javelin. The performance in the first four of these events is consolidated into Score 1, the next three into Score 2, and the last three into Score 3. Each such consolidation is obtained by giving appropriate positive weights to individual events. The final score is simply the total of these three scores. The athletes with the highest, second highest and the third highest final scores receive the gold, silver and bronze medals, respectively. The table given below gives the scores and performance of nineteen top athletes in this event.
The athletes from FRG and USA decided to run a $4 \times 100$ m relay race for their respective countries with the country having three athletes borrowing the athlete from CZE. Assume that all the athletes ran their stretch of the relay race at the same speed as in Decathlon event.

| Name | Country | Final Score | Score-1 | Score-2 | Score-3 | 100m | High jump | Pole-vault |
|---|---|---|---|---|---|---|---|---|
| Eduard Hamalainen | BLS | 8802 | 491 | 5322 | 2989 | 10.74 | 2.1 | 4.8 |
| Michael Smith | CAN | 8855 | 174 | 5274 | 3407 | 11.23 | 2.0 | 4.9 |
| Tomas Dvorak | CZE | 8796 | 499 | 5169 | 3128 | 10.63 | 1.9 | 4.7 |
| Uwe Frrimuth | DDR | 8799 | 441 | 5491 | 3124 | 11.06 | 2.0 | 4.8 |
| Torsten Voss | DHK | 8880 | 521 | 5234 | 5868 | 10.69 | 2.1 | 5.1 |
| Erki Nool | EST | 8768 | 408 | 5553 | 2808 | 10.71 | 2.0 | 5.4 |
| Christian Plaziat | FRA | 8775 | 563 | 5430 | 2781 | 10.72 | 2.1 | 5.0 |
| Jurgen Hingsen | FRG | 8792 | 451 | 5223 | 3033 | 10.95 | 2.0 | 4.9 |
| Siegfried Wentz | FRG | 8856 | 470 | 5250 | 3137 | 10.85 | 2.1 | 4.8 |
| Guido Kratschmer | FRG | 8861 | 575 | 5308 | 3064 | 10.58 | 2.0 | 4.6 |
| Daisy Thompson | GBR | | 582 | | 3003 | 10.55 | 2.1 | 4.6 |
| Frank Busemann | GER | 8905 | 568 | 5392 | 2945 | 10.60 | 2.0 | 4.8 |
| Alexandr Apaichev | SOV | 8803 | 492 | 5370 | 3115 | 10.92 | 2.0 | 4.8 |
| Grigory Degtyarov | SOV | 8823 | 339 | 5196 | 3114 | 11.05 | 2.1 | 4.9 |
| Robert Zmelik | TCH | 8832 | 494 | 5455 | 2883 | 10.78 | 2.1 | 5.1 |
| Dave Johnson | USA | 8811 | 366 | 5370 | 3114 | 10.78 | 2.1 | 5.0 |
| Steve Fritz | USA | 8827 | 427 | 5163 | 3119 | 10.75 | 2.0 | 5.0 |
| Bruce Jenner | USA | 8846 | 483 | 5280 | 3200 | 10.94 | 2.0 | 4.8 |
| Dan O'Brien | USA | 8897 | 408 | 5331 | 3120 | 10.36 | 2.1 | 4.8 |

How much more time did the FRG relay team take as compared to the USA team?

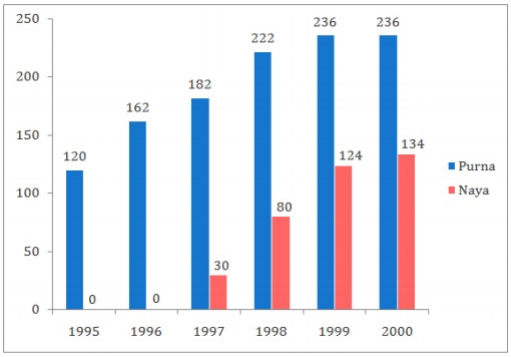
A. 0.18 B. 0.28 C. 0.78 D. 0.00

cat2003-2 data-interpretation bar-graph

## 1.1.36 Bar Graph: CAT 2004 | Question: 17 top

**Answer the questions based on the information given below:**

Purana and Naya are two brands of kitchen mixer-grinders available in the local market. Purana was an old brand that was introduced in 1990, while Naya was introduced in 1997. For both these brands, 20% of the mixer grinders bought in a particular year are disposed of as junk exactly two years later. It is known that 10 Purana mixer-grinders were disposed off in 1997. The following figure shows the number of Purana and Naya mixer-grinders in operation from 1995 to 2000, as at the end of the year.



How many Naya mixer-grinders were disposed off at the end of the year 2000?

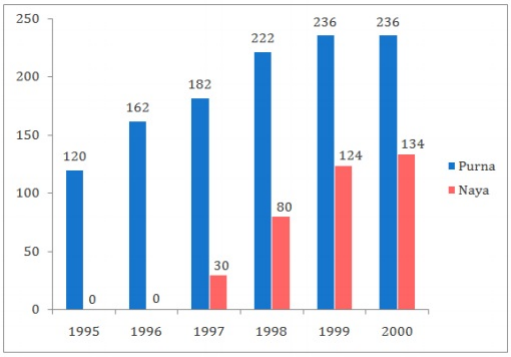
A. 10
B. 16
C. 22
D. Cannot be determined

cat2004 data-interpretation bar-graph

## 1.1.37 Bar Graph: CAT 2004 | Question: 18 top

**Answer the questions based on the information given below:**

Purana and Naya are two brands of kitchen mixer-grinders available in the local market. Purana was an old brand that was introduced in 1990, while Naya was introduced in 1997. For both these brands, 20% of the mixer grinders bought in a particular year are disposed of as junk exactly two years later. It is known that 10 Purana mixer-grinders were disposed off in 1997. The following figure shows the number of Purana and Naya mixer-grinders in operation from 1995 to 2000, as at the end of the year.



How many Naya mixer-grinders were purchased in 1999?

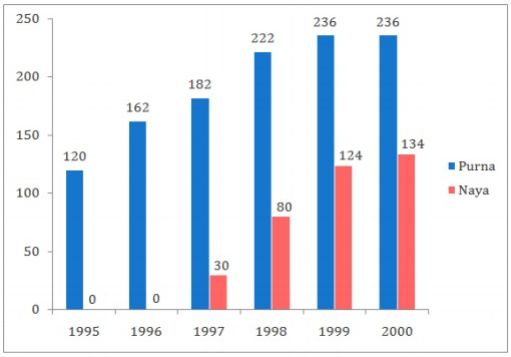
A. 45
B. 50
C. 55
D. 64

cat2004 data-interpretation bar-graph

## 1.1.38 Bar Graph: CAT 2004 | Question: 19 top

**Answer the questions based on the information given below:**

Purana and Naya are two brands of kitchen mixer-grinders available in the local market. Purana was an old brand that was introduced in 1990, while Naya was introduced in 1997. For both these brands, 20% of the mixer grinders bought in a particular year are disposed of as junk exactly two years later. It is known that 10 Purana mixer-grinders were disposed off in 1997. The following figure shows the number of Purana and Naya mixer-grinders in operation from 1995 to 2000, as at the end of the year.



How many Purana mixer-grinders were purchased in 1999?

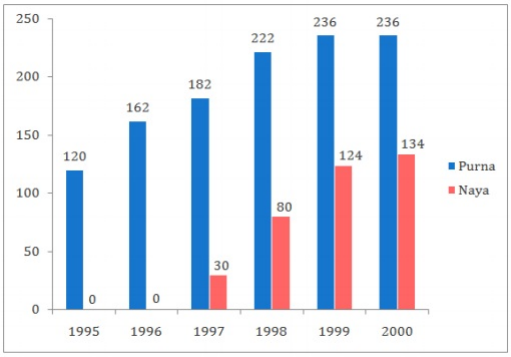
A. 20
B. 23
C. 50
D. Cannot be determined from the data

cat2004 data-interpretation bar-graph

## 1.1.39 Bar Graph: CAT 2004 | Question: 20 top

**Answer the questions based on the information given below:**

Purana and Naya are two brands of kitchen mixer-grinders available in the local market. Purana was an old brand that was introduced in 1990, while Naya was introduced in 1997. For both these brands, 20% of the mixer grinders bought in a particular year are disposed of as junk exactly two years later. It is known that 10 Purana mixer-grinders were disposed off in 1997. The following figure shows the number of Purana and Naya mixer-grinders in operation from 1995 to 2000, as at the end of the year.



How many Purana mixer-grinders were disposed off in 2000?

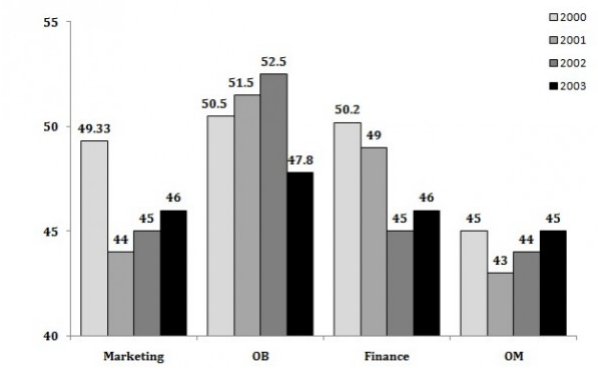
A. 0
B. 5
C. 6
D. Cannot be determined from the data

cat2004 data-interpretation bar-graph

## 1.1.40 Bar Graph: CAT 2005 | Question: 61 top

**Answer the following question based on the information given below:**

A management institute was established on January 1, 2000 with 3, 4, 5, and 6 faculty members in the Marketing organizational Behaviour (OB), Finance and Operation Management(OM) areas respectively, to start with. No faculty member retired or joined the institute in the first three months of the year of 2000. In the next four years, the institute recruited one faculty member in each of the four areas. All these nee faculty members, who joined the institute subsequently over the years, were 25 years old at the time of their joining the institute. All of them joined the institute on April 1. During these four years, one of the faculty members retired at the age of 60. The following diagram gives the area-wise average age ( in terms of number of completed years) of faculty members as on April 1, 2000, 2001, 2002, and 2003.



From which area did the faculty member retire?

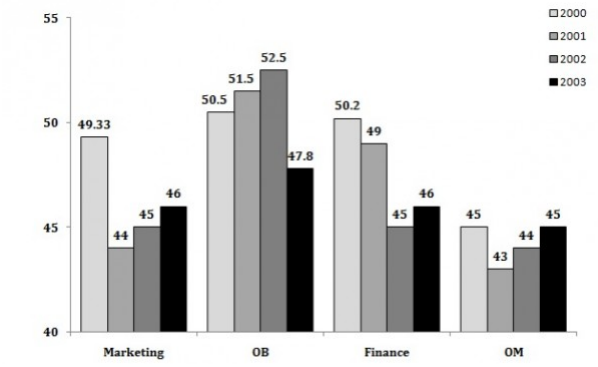
A. Finance B. Marketing C. OB D. OM

cat2005 data-interpretation bar-graph

## 1.1.41 Bar Graph: CAT 2005 | Question: 62 top

**Answer the following question based on the information given below:**

A management institute was established on January $1, 2000$ with $3, 4, 5,$ and $6$ faculty members in the Marketing organizational Behaviour (OB), Finance and Operation Management(OM) areas respectively, to start with. No faculty member retired or joined the institute in the first three months of the year of $2000$. In the next four years, the institute recruited one faculty member in each of the four areas. All these nee faculty members, who joined the institute subsequently over the years, were $25$ years old at the time of their joining the institute. All of them joined the institute on April $1$. During these four years, one of the faculty members retired at the age of $60$. The following diagram gives the area-wise average age ( in terms of number of completed years) of faculty members as on April $1, 2000, 2001, 2002,$ and $2003$.



Professors Naresh and Devesh, two faculty members in Marketing area, who have been with the institute since its inception, share a birthday, which falls on $20$th November. One was born in $1947$ and the other one in $1950$. On April $1, 2005,$ What was the age of the third faculty member who has been in the same area since inception?

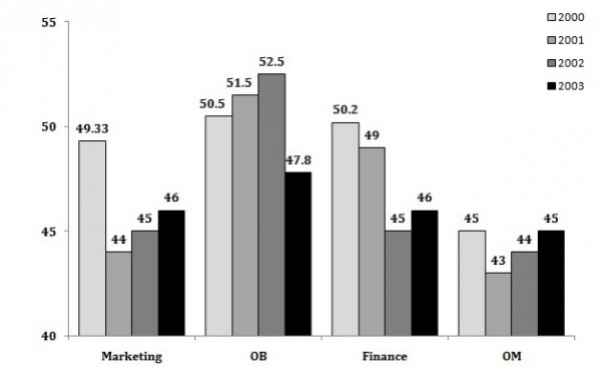
A. $47$ B. $50$ C. $51$ D. $52$

cat2005 data-interpretation bar-graph

## 1.1.42 Bar Graph: CAT 2005 | Question: 63 top

**Answer the following question based on the information given below:**

A management institute was established on January $1, 2000$ with $3, 4, 5,$ and $6$ faculty members in the Marketing organizational Behaviour (OB), Finance and Operation Management(OM) areas respectively, to start with. No faculty member retired or joined the institute in the first three months of the year of $2000$. In the next four years, the institute recruited one faculty member in each of the four areas. All these nee faculty members, who joined the institute subsequently over the years, were $25$ years old at the time of their joining the institute. All of them joined the institute on April $1$. During these four years, one of the faculty members retired at the age of $60$. The following diagram gives the area-wise average age ( in terms of number of completed years) of faculty members as on April $1, 2000, 2001, 2002,$ and $2003$.



In which year did the new faculty member join the Finance area?

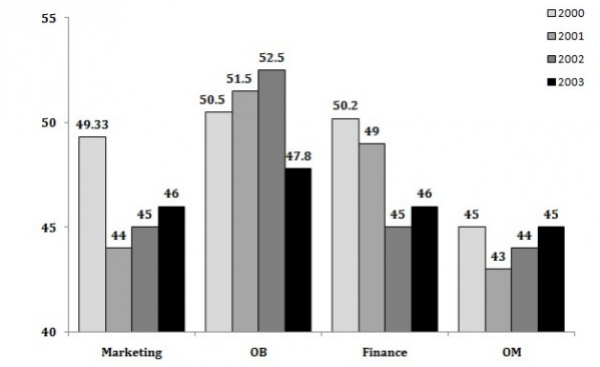
A. 2000 B. 2001 C. 2002 D. 2003

cat2005 data-interpretation bar-graph

## 1.1.43 Bar Graph: CAT 2005 | Question: 64 top

**Answer the following question based on the information given below:**

A management institute was established on January $1, 2000$ with $3, 4, 5,$ and $6$ faculty members in the Marketing organizational Behaviour (OB), Finance and Operation Management(OM) areas respectively, to start with. No faculty member retired or joined the institute in the first three months of the year of $2000$. In the next four years, the institute recruited one faculty member in each of the four areas. All these nee faculty members, who joined the institute subsequently over the years, were $25$ years old at the time of their joining the institute. All of them joined the institute on April $1$. During these four years, one of the faculty members retired at the age of $60$. The following diagram gives the area-wise average age ( in terms of number of completed years) of faculty members as on April $1, 2000, 2001, 2002,$ and $2003$.



What was the age of the new faculty member, who joined the OM area as on April $1$ $2003$?

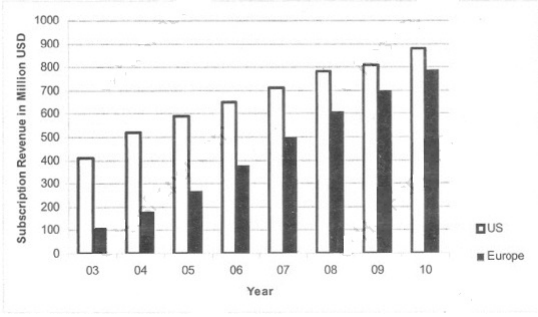
A. 25 B. 26 C. 27 D. 28

cat2005 data-interpretation bar-graph

## 1.1.44 Bar Graph: CAT 2008 | Question: 34 top

**Answer the following question based on the information given below.**

The bar chart shows the revenue received, in million US Dollars (USD), from subscribers to a particular Internet service. The data covers the period $2003 - 2007$ for the Unites States (US) and Europe. The bar chart also shows the estimated revenues from subscription to this service for the period $2008-2010$.



In 2003, sixty percent of subscribers in Europe were men. Given that women subscribers increase at the rate of 10 percent per annum and men subscribers at the rate of 5 percent per annum, what is the approximate percentage of growth of subscribers between 2003 and 2010 in Europe. The subscription prices are volatile and may change each years change.

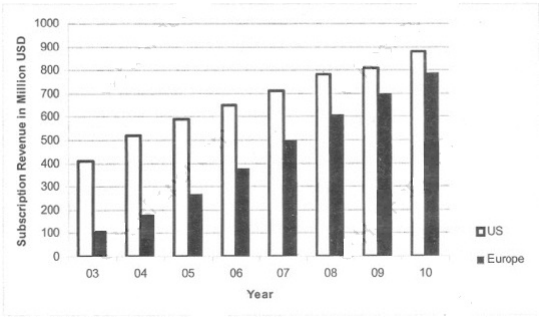
A. 62 B. 15 C. 78 D. 84 E. 50

cat2008 data-interpretation bar-graph

## 1.1.45 Bar Graph: CAT 2008 | Question: 35 top

**Answer the following question based on the information given below.**

The bar chart shows the revenue received, in million US Dollars (USD), from subscribers to a particular Internet service. The data covers the period $2003 - 2007$ for the Unites States (US) and Europe. The bar chart also shows the estimated revenues from subscription to this service for the period $2008-2010$.



Consider the annual percent change in the gap between subscription revenues in the US and Europe. What is the year in which the absolute value of this change is the highest?

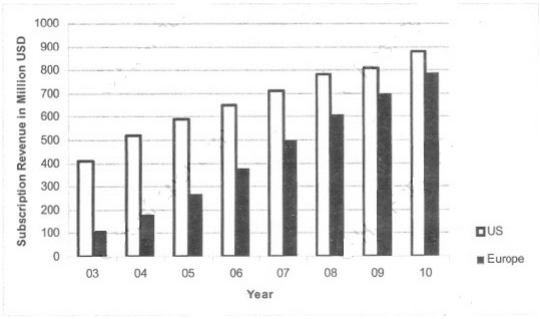
A. $03 - 04$ B. $05 - 06$ C. $06 - 07$ D. $08 - 09$ E. $09 - 10$

cat2008 data-interpretation bar-graph

## 1.1.46 Bar Graph: CAT 2008 | Question: 36 top

**Answer the following question based on the information given below.**

The bar chart shows the revenue received, in million US Dollars (USD), from subscribers to a particular Internet service. The data covers the period $2003 - 2007$ for the Unites States (US) and Europe. The bar chart also shows the estimated revenues from subscription to this service for the period $2008-2010$.

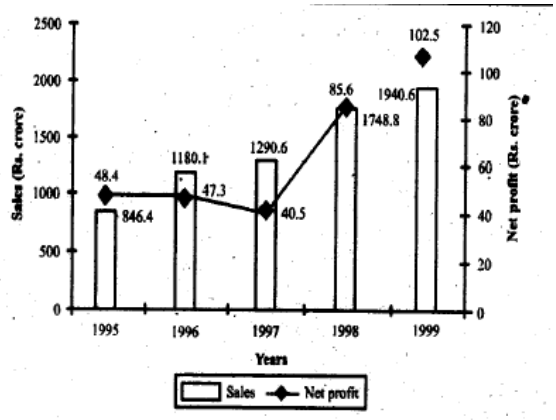


While the subscription in Europe has been growing steadily towards that of the US, the growth rate in Europe seems to be declining. which of the following is closest to the percent change in growth rate of 2007 (over 2006) relative to the growth rate of 2005 (over 2004)?

A. 17 B. 20 C. 35 D. 60 E. 100

cat2008 data-interpretation bar-graph

## 1.1.47 Bar Graph: CAT 2009 | Question: 21 top



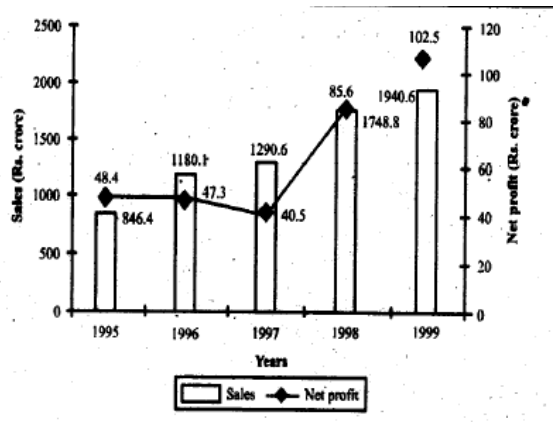
Note: Net profit= Gross profit - Tax. Gross profit = Sales - Expenses. The figures for sales is given at the bottom of the bar chart and the figures for net profit is given on top of the line chart.

What is the net profit percentage of XPL in 1998?

A. 4.6%  B. 4.8%  C. 5.1%  D. 6.2%

cat2009 data-interpretation bar-graph

## 1.1.48 Bar Graph: CAT 2009 | Question: 22 top



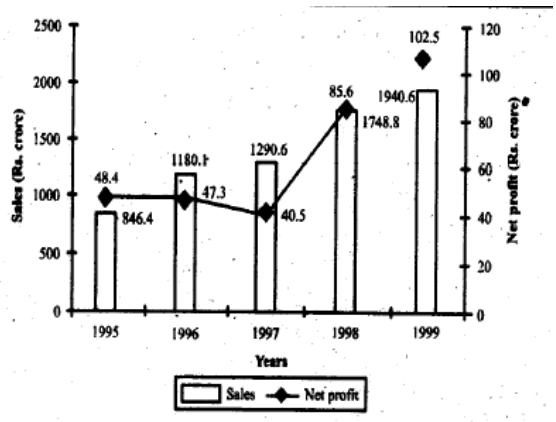
Note: Net profit= Gross profit - Tax. Gross profit = Sales - Expenses. The figures for sales is given at the bottom of the bar chart and the figures for net profit is given on top of the line chart.

Which year showed the maximum percentage increase in sales?

A. 1999  B. 1998  C. 1997  D. 1996

cat2009 data-interpretation bar-graph

## 1.1.49 Bar Graph: CAT 2009 | Question: 23 top



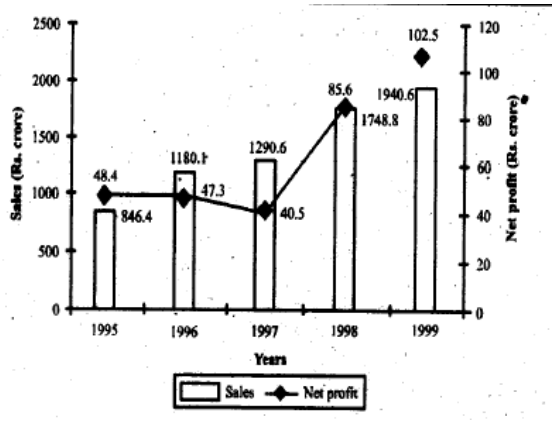
Note: Net profit= Gross profit - Tax. Gross profit = Sales - Expenses. The figures for sales is given at the bottom of the bar chart and the figures for net profit is given on top of the line chart.

By how much percentage has the net profit dropped in $1996$?

A. $1.1\%$
B. $2.27\%$
C. $2.53\%$
D. Cannot be determined.

cat2009 data-interpretation bar-graph

## 1.1.50 Bar Graph: CAT 2009 | Question: 24 top



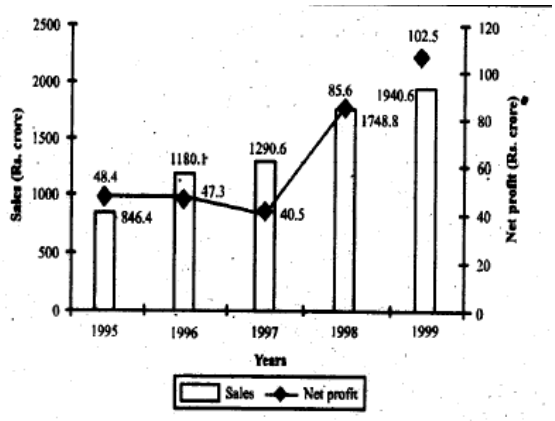
Note: Net profit= Gross profit - Tax. Gross profit = Sales - Expenses. The figures for sales is given at the bottom of the bar chart and the figures for net profit is given on top of the line chart.

If XPL sold $20,000$ units in both $1998$ and $1999$, by what percentage has the price per unit changed?

A. $8.7\%$
B. $10.96\%$
C. $9.86\%$
D. Cannot be determined.

cat2009 data-interpretation bar-graph

## 1.1.51 Bar Graph: CAT 2009 | Question: 25 top



Note: Net profit= Gross profit - Tax. Gross profit = Sales - Expenses. The figures for sales is given at the bottom of the bar chart and the figures for net profit is given on top of the line chart.

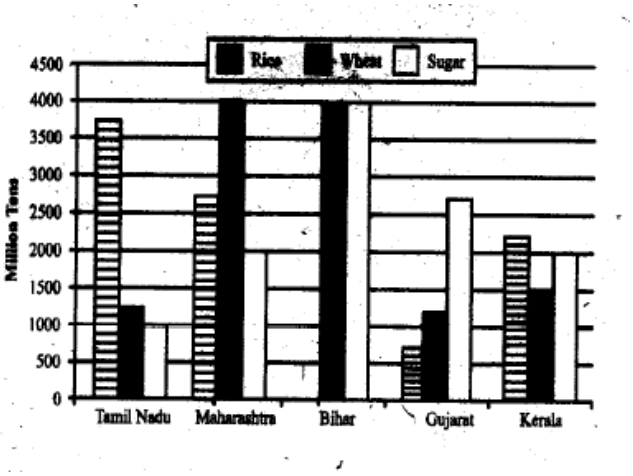
The year in which the expenses of XPL Electronic are highest is

A. 1999
B. 1998
C. 1997
D. Cannot be determined.

cat2009 data-interpretation bar-graph

## 1.1.52 Bar Graph: CAT 2009 | Question: 26 top

The following chart gives the production of three major crops (in million tons) across five Indian states in the year $1998$.



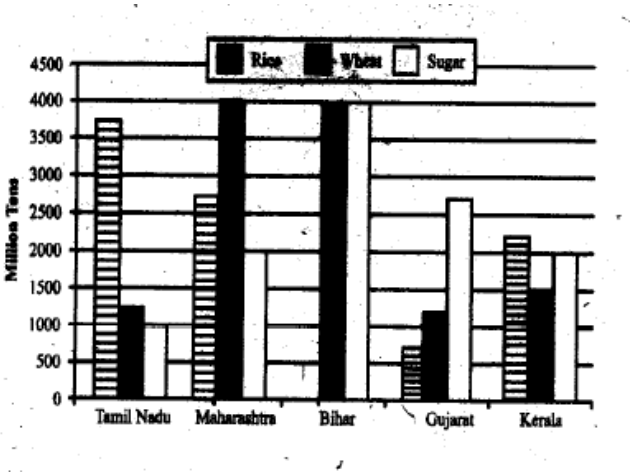
If Tamil Nadu registers an annual increase of 22 percent in rice production, what was the rice production in Tamil Nadu in 1998?

A. 1900 million tonnes.
B. 2300 million tonnes.
C. 2180 million tonnes.
D. 2520 million tonnes.

cat2009 data-interpretation bar-graph

## 1.1.53 Bar Graph: CAT 2009 | Question: 27 top

The following chart gives the production of three major crops (in million tons) across five Indian states in the year 1998.



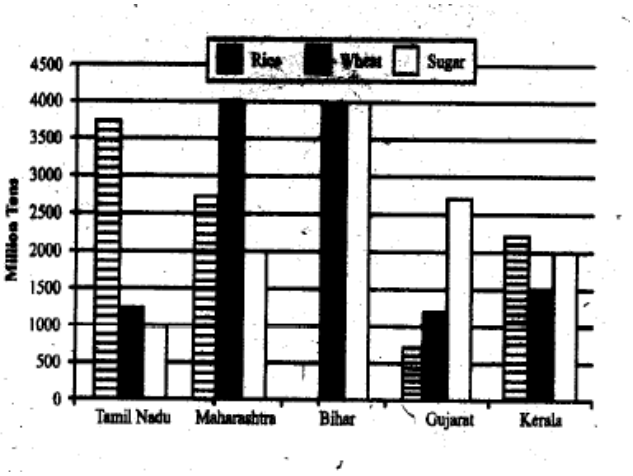
What is the ratio of total wheat production in the five states to total sugar production?

A. 0.6 B. 1.4 C. 1.0 D. 0.75

cat2009 data-interpretation bar-graph

## 1.1.54 Bar Graph: CAT 2009 | Question: 28 top

The following chart gives the production of three major crops (in million tons) across five Indian states in the year 1998.



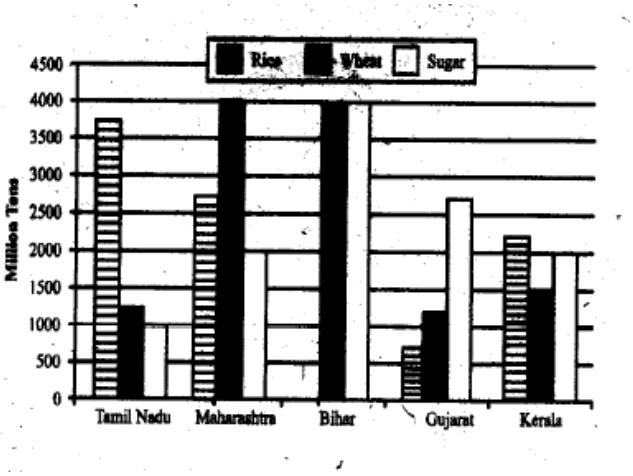
If sugar costs Rs. 700 per ton and wheat costs Rs. 400 per ton, what was the total worth of sugar and wheat production in India?

A. 42 million B. 21 million C. 10.5 million D. Data insufficient

cat2009 data-interpretation bar-graph

## 1.1.55 Bar Graph: CAT 2009 | Question: 29 top

The following chart gives the production of three major crops (in million tons) across five Indian states in the year 1998.



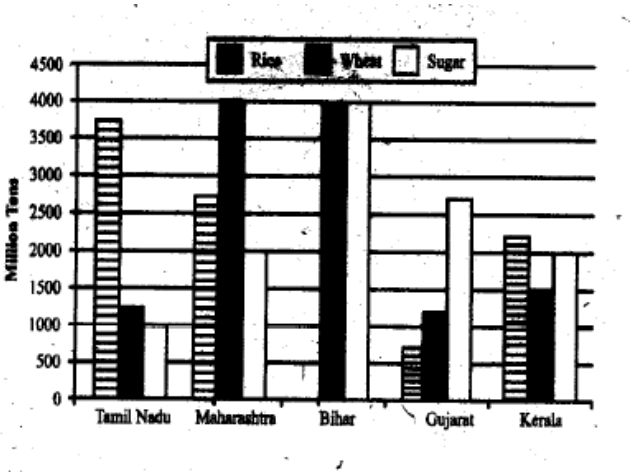
If the yield per hectare of sugar is 3.86 tons, what is the ratio of area employed to produce sugar in Bihar to Gujrat?

A. 1.15 B. 1.45 C. 1.35 D. Data insufficient.

cat2009 data-interpretation bar-graph

## 1.1.56 Bar Graph: CAT 2009 | Question: 30 top

The following chart gives the production of three major crops (in million tons) across five Indian states in the year 1998.



If these five states constitute 77 percent of the country's wheat production and 23 percent of country's wheat consumption is imported, what is the amount of wheat imported in 1998?

A. 4700 million tonnes.
B. 3900 million tonnes.
C. 3500 million tonnes.
D. Data insufficient.

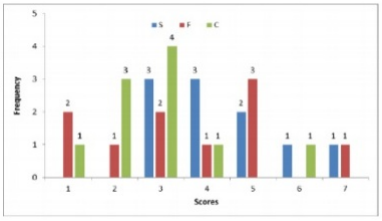
cat2009 data-interpretation bar-graph

## 1.1.57 Bar Graph: CAT 2017 Set-1 | Question: 47 top

Simple Happiness Index (SHI) of a country is computed on the basis of three parameters: social support (S), freedom to life choices (F) and corruption perception (C). Each of these three parameters is measured on a scale of 0 to 8 (Integers only). A country is then categorized based on the total score obtained by summing the score of the three parameters, as shown in the following table:

| Total score | $0-4$ | $5-8$ | $9-13$ | $14-19$ | $20-24$ |
|---|---|---|---|---|---|
| Category | Very Unhappy | Unhappy | Neutral | Happy | VeryHappy |

Following diagram depicts the frequency distribution of the scores in S, F and c of 10 countries – Amda, Benga, Calla, Delma, Eppa. Varsa, Wanna, Xanda, Yanga and Zooma;



Further, the following are known:
1. Amda and Calls jointly have the lowest total score, 7, with identical scores in all the three parameters.
2. Zooma has a total score of 17.
3. All the 3 countries, which are categorised as happy, have the highest score in exactly one parameter

What is Amda's score in F?

A. 3
B. 4
C. 1
D. 2

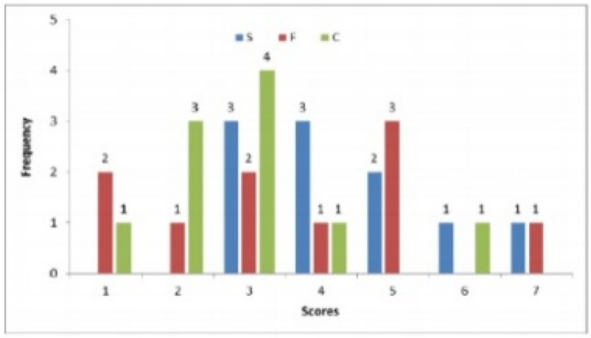
cat2017-1 data-interpretation bar-graph

## 1.1.58 Bar Graph: CAT 2017 Set-1 | Question: 48 top

Simple Happiness Index (SHI) of a country is computed on the basis of three parameters: social support (S), freedom to life choices (F) and corruption perception (C). Each of these three parameters is measured on a scale of 0 to 8 (Integers only). A country is then categorized based on the total score obtained by summing the score of the three parameters, as shown in the following table:

| Total score | $0-4$ | $5-8$ | $9-13$ | $14-19$ | $20-24$ |
|---|---|---|---|---|---|
| Category | Very Unhappy | Unhappy | Neutral | Happy | VeryHappy |

Following diagram depicts the frequency distribution of the scores in S, F and C of 10 countries – Amda, Benga, Calla, Delma, Eppa. Varsa, Wanna, Xanda, Yanga and Zooma;



Further, the following are known:
1. Amda and Calls jointly have the lowest total score, 7, with identical scores in all the three parameters.
2. Zooma has a total score of 17.
3. All the 3 countries, which are categorised as happy, have the highest score in exactly one parameter

What is Zooma's score in S?

A. 6 B. 5 C. 1 D. 2

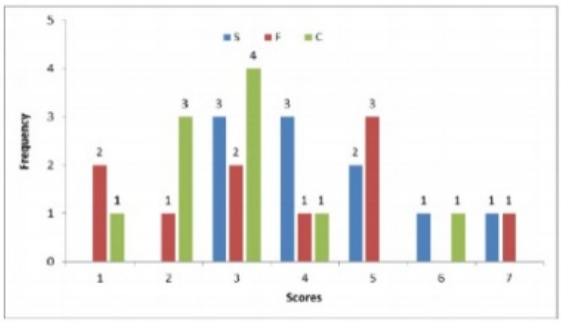
cat2017-1 data-interpretation bar-graph

## 1.1.59 Bar Graph: CAT 2017 Set-1 | Question: 49 top

Simple Happiness Index (SHI) of a country is computed on the basis of three parameters: social support (S), freedom to life choices (F) and corruption perception (C). Each of these three parameters is measured on a scale of 0 to 8 (Integers only). A country is then categorized based on the total score obtained by summing the score of the three parameters, as shown in the following table:

| Total score | 0 – 4 | 5 – 8 | 9 – 13 | 14 – 19 | 20 – 24 |
|---|---|---|---|---|---|
| Category | Very Unhappy | Unhappy | Neutral | Happy | VeryHappy |

Following diagram depicts the frequency distribution of the scores in S, F and C of 10 countries – Amda, Benga, Calla, Delma, Eppa. Varsa, Wanna, Xanda, Yanga and Zooma;



Further, the following are known:
1. Amda and Calls jointly have the lowest total score, 7, with identical scores in all the three parameters.
2. Zooma has a total score of 17.
3. All the 3 countries, which are categorised as happy, have the highest score in exactly one parameter

Benga and Delma, two countries categorized as happy, are tied with the same total score. What is the maximum score they can have?

A. 14 B. 15 C. 16 D. 17

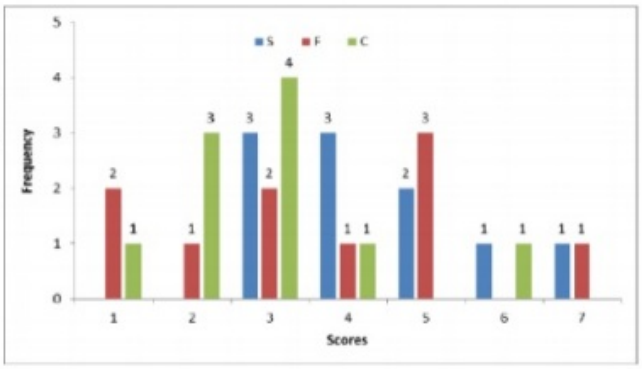
cat2017-1 data-interpretation bar-graph

## 1.1.60 Bar Graph: CAT 2017 Set-1 | Question: 50 top

Simple Happiness Index (SHI) of a country is computed on the basis of three parameters: social support (S), freedom to life choices (F) and corruption perception (C). Each of these three parameters is measured on a scale of 0 to 8 (Integers only). A country is then categorized based on the total score obtained by summing the score of the three parameters, as shown in the following table:

| Total score | $0-4$ | $5-8$ | $9-13$ | $14-19$ | $20-24$ |
|---|---|---|---|---|---|
| Category | Very Unhappy | Unhappy | Neutral | Happy | VeryHappy |

Following diagram depicts the frequency distribution of the scores in S, F and C of $10$ countries – Amda, Benga, Calla, Delma, Eppa. Varsa, Wanna, Xanda, Yanga and Zooma;



Further, the following are known:
1. Amda and Calls jointly have the lowest total score, $7$, with identical scores in all the three parameters.
2. Zooma has a total score of $17$.
3. All the $3$ countries, which are categorised as happy, have the highest score in exactly one parameter

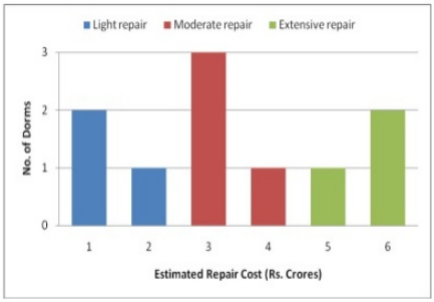
If Benga scores $16$ and Delma scores $15$, then what is the maximum number of counties with a score of $13$?

A. $0$ B. $1$ C. $2$ D. $3$

cat2017-1 data-interpretation bar-graph

## 1.1.61 Bar Graph: CAT 2017 Set-2 | Question: 47 top

At a management school, the oldest $10$ dorms, numbered $1$ to $10$, need to be repaired urgently. The following diagram represents the estimated repair costs (in Rs. Crores) for the $10$ dorms. For any dorm, the estimated repair cost (in Rs. Crores) is an integer. Repairs with estimated cost Rs. $1$ or $2$ Crores are considered light repairs, repairs with estimated cost Rs. $3$ or $4$ are considered moderate repairs and repairs with estimated cost Rs. $5$ or $6$ Crores are considered extensive repairs.



Further, the following are known:

1. Odd-numbered dorms do not need light repair, even-numbered dorms do not need moderate repair and dorms, whose numbers are divisible by $3$, do not need extensive repair.
2. Dorms $4$ to $9$ all need different repair costs, with Dorm $7$ needing the maximum and Dorm $8$ needing the minimum.

Which of the following is NOT necessarily true?

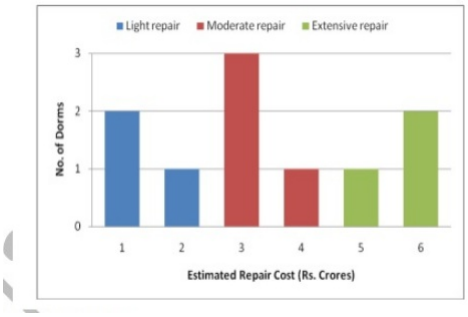
A. Dorm $1$ needs a moderate repair
B. Dorm $5$ repair will cost no more than Rs. $4$ Crores
C. Dorm $7$ needs an extensive repair
D. Dorm $10$ repair will cost no more than Rs. $4$ Crores

cat2017-2 data-interpretation bar-graph

## 1.1.62 Bar Graph: CAT 2017 Set-2 | Question: 48 top

At a management school, the oldest $10$ dorms, numbered $1$ to $10$, need to be repaired urgently, The following diagram represents the estimated repair costs (in Rs. Crores) for the $10$ dorms. For any dorm, the estimated repair cost (in Rs. Crores) is

an integer. Repairs with estimated cost Rs. 1 or 2 Crores are considered light repairs, repairs with estimated cost Rs. 3 or 4 are considered moderate repairs and repairs with estimated cost Rs. 5 or 6 Crores are considered extensive repairs.



Further, the following are known:

1. Odd-numbered dorms do not need light repair, even-numbered dorms do not need moderate repair and dorms, whose numbers are divisible by 3, do not need extensive repair.
2. Dorms 4 to 9 all need different repair costs, with Dorm 7 needing the maximum and Dorm 8 needing the minimum.

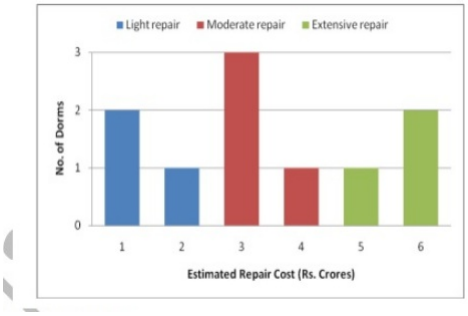
What is the total cost of repairing the odd-numbered dorms (in Rs. Crores)?

A. 19 B. 18 C. 20 D. 21

cat2017-2 data-interpretation bar-graph

## 1.1.63 Bar Graph: CAT 2017 Set-2 | Question: 49 top

At a management school, the oldest 10 dorms, numbered 1 to 10, need to be repaired urgently, The following diagram represents the estimated repair costs (in Rs. Crores) for the 10 dorms. For any dorm, the estimated repair cost (in Rs. Crores) is an integer. Repairs with estimated cost Rs. 1 or 2 Crores are considered light repairs, repairs with estimated cost Rs. 3 or 4 are considered moderate repairs and repairs with estimated cost Rs. 5 or 6 Crores are considered extensive repairs.



Further, the following are known:

1. Odd-numbered dorms do not need light repair, even-numbered dorms do not need moderate repair and dorms, whose numbers are divisible by 3, do not need extensive repair.
2. Dorms 4 to 9 all need different repair costs, with Dorm 7 needing the maximum and Dorm 8 needing the minimum.

Suppose further that: 1.4 of the 10 dorms needing repair are women's dorms and need a total of Rs. 20.Crores for repair 2. Only one of Dorms 1 to 5 is a women's dorm.

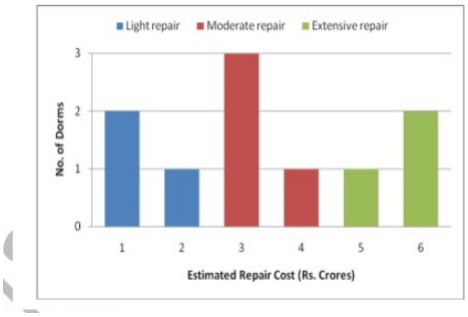
What is the cost for repairing Dorm 9 (in Rs. Crores)?

A. 2 B. 12 C. 3 D. 4

cat2017-2 data-interpretation bar-graph

## 1.1.64 Bar Graph: CAT 2017 Set-2 | Question: 50 top

At a management school, the oldest 10 dorms, numbered 1 to 10, need to be repaired urgently, The following diagram represents the estimated repair costs (in Rs. Crores) for the 10 dorms. For any dorm, the estimated repair cost (in Rs. Crores) is an integer. Repairs with estimated cost Rs. 1 or 2 Crores are considered light repairs, repairs with estimated cost Rs. 3 or 4 are considered moderate repairs and repairs with estimated cost Rs. 5 or 6 Crores are considered extensive repairs.



Further, the following are known:

1. Odd-numbered dorms do not need light repair, even-numbered dorms do not need moderate repair and dorms, whose numbers are divisible by $3$, do not need extensive repair.
2. Dorms $4$ to $9$ all need different repair costs, with Dorm $7$ needing the maximum and Dorm $8$ needing the minimum.

Suppose further that:

1. $4$ of the $10$ dorms needing repair are women's dorms and need a total of Rs. $20$.Crores for repair.
2. Only one of Dorms $1$ to $5$ is a women's dorm.

Which of the following is a women's dorm?

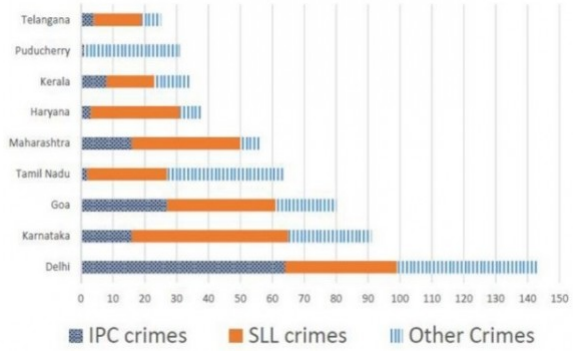
A. Dorm 2 B. Dorm 5 C. Dorm 8 D. Dorm 10

cat2017-2 data-interpretation bar-graph

## 1.1.65 Bar Graph: CAT 2019 Set-1 | Question: 55 top

The Ministry of Home Affairs is analysing crimes committed by foreigners in different states and union territories(UT) of India. All cases refer to the ones registered against foreigners in $2016$.

The number of cases-classified into three categories: IPC crimes, SLL crimes and other crimes-for nine states/UTs are shown in the figure below. These nine belong to the top ten states/UTs in terms of the total number of cases registered. The remaining state(among top ten) is West Bengal, where all the $520$ cases registered were SLL crimes.



The table below shows the ranks of the ten states/UTs mentioned above among ALL states/UTs of India in terms of the number of cases registered in each of the three category of crimes. A state/UT is given rank $r$ for a category of crimes if there are $(r-1)$ states/UTs having a larger number of cases registered in that category of crimes. For example, if two states have the same number of cases in a category, and exactly three other states/UTs have larger number of cases registered in the same category, then both the states are given rank $4$ in that category. Missing ranks in the table denoted by *.

| | IPC crimes | SLL crimes | Other crimes |
|---|---|---|---|
| Delhi | * | * | * |
| Goa | * | 4 | * |
| Haryana | 8 | 6 | * |
| Karnataka | 3 | 2 | * |
| Kerala | * | 9 | * |
| Maharashtra | 3 | 4 | 8 |
| Puducherry | 13 | 29 | * |
| Tamil Nadu | 11 | 7 | * |

| | | | |
|---|---|---|---|
| Telangana | 6 | 9 | 8 |
| West Bengal | 17 | * | 16 |

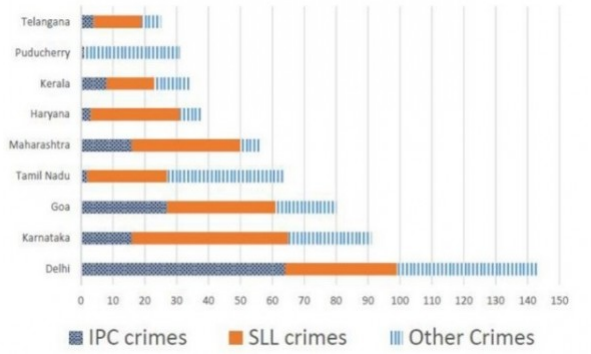
What is the rank of Kerala in the ‘IPC crimes’ category _____

cat2019-1 data-interpretation bar-graph numerical-answer

## 1.1.66 Bar Graph: CAT 2019 Set-1 | Question: 56 top

The Ministry of Home Affairs is analysing crimes committed by foreigners in different states and union territories(UT) of India. All cases refer to the ones registered against foreigners in 2016.

The number of cases-classified into three categories: IPC crimes, SLL crimes and other crimes-for nine states/UTs are shown in the figure below. These nine belong to the top ten states/UTs in terms of the total number of cases registered. The remaining state(among top ten) is West Bengal, where all the 520 cases registered were SLL crimes.



The table below shows the ranks of the ten states/UTs mentioned above among ALL states/UTs of India in terms of the number of cases registered in each of the three category of crimes. A state/UT is given rank $r$ for a category of crimes if there are $(r-1)$states/UTs having a larger number of cases registered in that category of crimes. For example, if two states have the same number of cases in a category, and exactly three other states/UTs have larger numbers of cases registered in the same category, then both the states are given rank 4 in that category. Missing ranks in the table denoted by *.

| | IPC crimes | SLL crimes | Other crimes |
|---|---|---|---|
| Delhi | * | * | * |
| Goa | * | 4 | * |
| Haryana | 8 | 6 | * |
| Karnataka | 3 | 2 | * |
| Kerala | * | 9 | * |
| Maharashtra | 3 | 4 | 8 |
| Puducherry | 13 | 29 | * |
| Tamil Nadu | 11 | 7 | * |
| Telangana | 6 | 9 | 8 |
| West Bengal | 17 | * | 16 |

In the two states where the highest total number of cases are registered, the ratio of the total number of cases in IPC crimes to the total number in SLL crimes is closest to

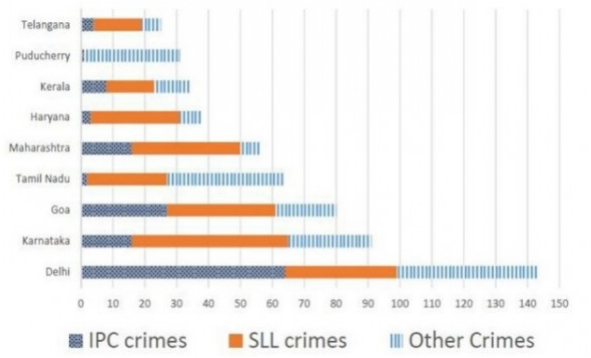
A. 1 : 9 B. 11 : 10 C. 3 : 2 D. 19 : 20

cat2019-1 data-interpretation bar-graph

## 1.1.67 Bar Graph: CAT 2019 Set-1 | Question: 57 top

The Ministry of Home Affairs is analysing crimes committed by foreigners in different states and union territories(UT) of India. All cases refer to the ones registered against foreigners in 2016.

The number of cases-classified into three categories: IPC crimes, SLL crimes and other crimes-for nine states/UTs are shown in the figure below. These nine belong to the top ten states/UTs in terms of the total number of cases registered. The remaining state(among top ten) is West Bengal, where all the 520 cases registered were SLL crimes.



The table below shows the ranks of the ten states/UTs mentioned above among ALL states/UTs of India in terms of the number of cases registered in each of the three category of crimes. A states/UT is given rank $r$ for category of crimes if there are $(r-1)$ state/UTs having a larger number of cases registered in that category of crimes. For example, if two states have the same number of cases in a category, and exactly three other states/UTs have larger number of cases registered in the same category, then both the states are given rank 4 in that category. Missing ranks in the table are denoted by *.

| | IPC crimes | SLL crimes | Other crimes |
|---|---|---|---|
| Delhi | * | * | * |
| Goa | * | 4 | * |
| Haryana | 8 | 6 | * |
| Karnataka | 3 | 2 | * |
| Kerala | * | 9 | * |
| Maharashtra | 3 | 4 | 8 |
| Puducherry | 13 | 29 | * |
| Tamil Nadu | 11 | 7 | * |
| Telangana | 6 | 9 | 8 |
| West Bengal | 17 | * | 16 |

Which of the following is DEFINITELY true about the ranks of states/UT in the 'other crimes' category

i. Tamil Nadu: 2
ii. Puducherry: 3

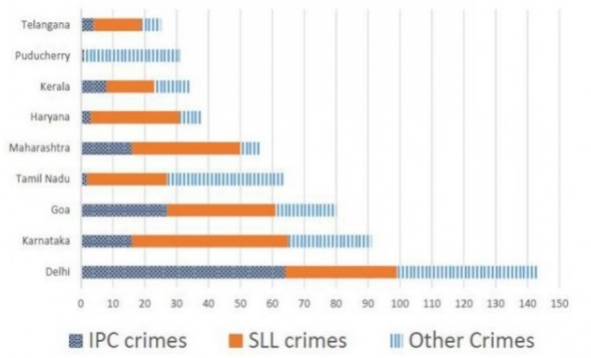
A. both i and ii
B. neither i, nor ii
C. only ii
D. only i

cat2019-1 data-interpretation bar-graph

## 1.1.68 Bar Graph: CAT 2019 Set-1 | Question: 58 top

The Ministry of Home Affairs is analysing crimes committed by foreigners in different states and union territories(UT) of India. All cases refer to the ones registered against foreigners in 2016.

The number of cases-classified into three categories: IPC crimes, SLL crimes and other crimes-for nine states/UTs are shown in the figure below. These nine belong to the top ten states/UTs in terms of the total number of cases registered. The remaining state(among top ten) is West Bengal, where all the 520 cases registered were SLL crimes.



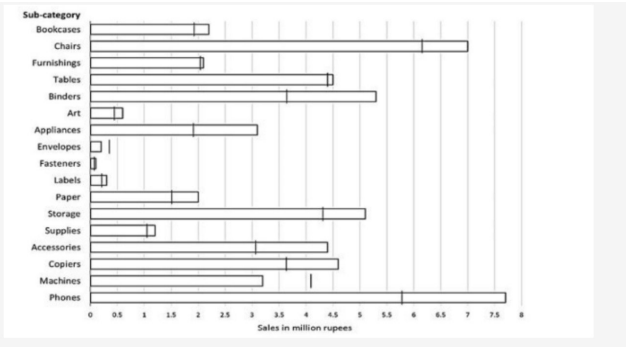
The table below shows the ranks of the ten states/UTs mentioned above among ALL states/UTs of India in terms of the number of cases registered in each of the three category of crimes. A state/UT is given rank $r$ for category of crimes if there are $(r-1)$ states/UTs having a larger number of cases registered in that category of crimes. For example, if two states have the same number of cases in a category, and exactly three other states/UTs have larger number of cases registered in the same category, then both the states are given rank $4$ in that category. Missing ranks in the table denoted by *.

| | IPC crimes | SLL crimes | Other crimes |
|---|---|---|---|
| Delhi | * | * | * |
| Goa | * | 4 | * |
| Haryana | 8 | 6 | * |
| Karnataka | 3 | 2 | * |
| Kerala | * | 9 | * |
| Maharashtra | 3 | 4 | 8 |
| Puducherry | 13 | 29 | * |
| Tamil Nadu | 11 | 7 | * |
| Telangana | 6 | 9 | 8 |
| West Bengal | 17 | * | 16 |

What is the sum of the ranks of Delhi in three categories of crimes _____

cat2019-1 data-interpretation bar-graph numerical-answer

## 1.1.69 Bar Graph: CAT 2021 Set-1 | Data Interpretation and Logical Reasoning | Question: 1 top



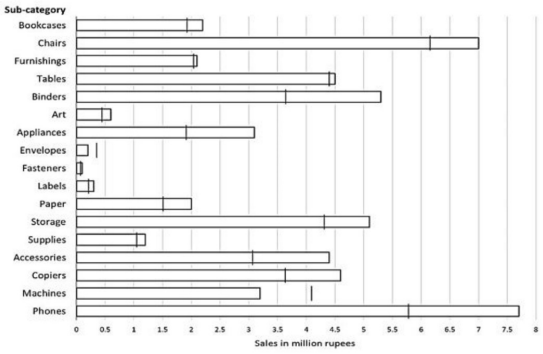
The horizontal bars in the above diagram represent $2020$ aggregate sales $(\text{in } ₹ \text{ million})$ of a company for the different subcategories of its products. The top four product subcategories (Bookcases, Chairs, Furnishings, Tables) belong to furniture product category; the bottom four product subcategories (Accessories, Copiers, Machines, Phones) belong to the technology product category while all other product subcategories belong to the office supply product category. For each of the product subcategories, there is a vertical line indicating the sales of the corresponding subcategory in $2019$.

The total sales $(\text{in } ₹ \text{ million})$ in $2019$ from products in office supplies category is closest to

A. $12.5$ B. $16.5$ C. $13.5$ D. $18.0$

cat2021-set1 data-interpretation bar-graph

## 1.1.70 Bar Graph: CAT 2021 Set-1 | Data Interpretation and Logical Reasoning | Question: 3 top

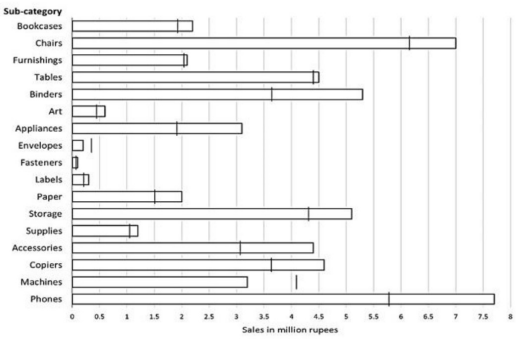


The horizontal bars in the above diagram represent 2020 aggregate sales (in ₹ million) of a company for the different subcategories of its products. The top four product subcategories (Bookcases, Chairs, Furnishings, Tables) belong to furniture product category; the bottom four product subcategories (Accessories, Copiers, Machines, Phones) belong to the technology product category while all other product subcategories belong to the office supply product category. For each of the product subcategories, there is a vertical line indicating the sales of the corresponding subcategory in 2019.

How many subcategories had sales of ₹4 million or more in 2019 and registered an increase in sales in excess of 25% in 2020?

cat2021-set1 data-interpretation bar-graph numerical-answer

## 1.1.71 Bar Graph: CAT 2021 Set-1 | Data Interpretation and Logical Reasoning | Question: 4 top



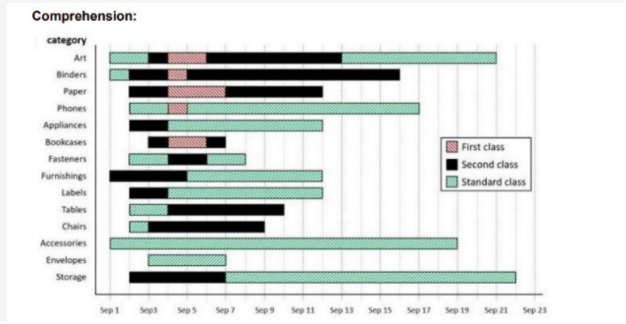
The horizontal bars in the above diagram represent 2020 aggregate sales (in ₹ million) of a company for the different subcategories of its products. The top four product subcategories (Bookcases, Chairs, Furnishings, Tables) belong to furniture product category; the bottom four product subcategories (Accessories, Copiers, Machines, Phones) belong to the technology product category while all other product subcategories belong to the office supply product category. For each of the product subcategories, there is a vertical line indicating the sales of the corresponding subcategory in 2019.

The improvement index for a category is the maximum percentage increase in sales from 2019 to 2020 among any of its subcategories. The correct order of categories in increasing order of this improvement index is

A. technology, furniture, office supply
B. office supply, technology, furniture
C. furniture, technology, office supply
D. office supply, furniture, technology

cat2021-set1 data-interpretation bar-graph

## 1.1.72 Bar Graph: CAT 2021 Set-2 | Data Interpretation and Logical Reasoning | Question: 1 top



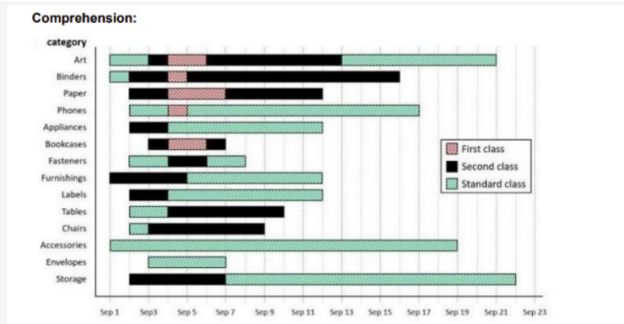
The different bars in the diagram above provide information about different orders in various categories (Art, Binders, ...) that were booked in the first two weeks of September of a store for one client. The color and pattern of a bar denotes the ship mode (First Class / Second Class / Standard Class). The left end point of a bar indicates the booking day of the order, while the right end point indicates the dispatch day of the order. The difference between the dispatch day and the booking day (measured in terms of the number of days) is called the processing time of the order. For the same category, an order is considered for booking only after the previous order of the same category is dispatched. No two consecutive orders of the same category had identical ship mode during this period.

For example, there were only two orders in the furnishing category during this period. The first one was shipped in the Second Class. It was booked on Sep 1 and dispatched on Sep 5. The second order was shipped in the Standard class. It was booked on Sep 5 (although the order might have been placed before that) and dispatched on Sep 12. So the processing times were 4 and 7 days respectively for these orders.

How many days between Sep 1 and Sep 14 (both inclusive) had no booking from this client considering all the above categories?

cat2021-set2 data-interpretation bar-graph numerical-answer

## 1.1.73 Bar Graph: CAT 2021 Set-2 | Data Interpretation and Logical Reasoning | Question: 2 top



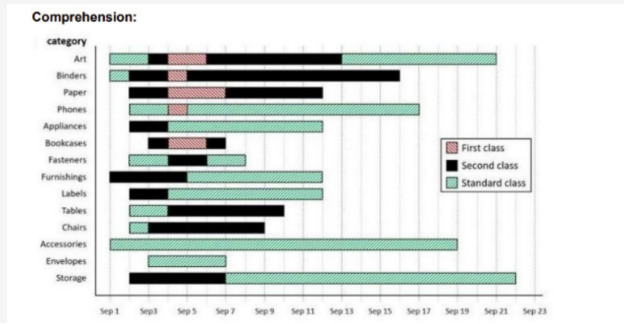
The different bars in the diagram above provide information about different orders in various catgories (Art, Binders, ...) that were booked in the first two weeks of September of a store for one client. The colour and pattern of a bar denotes the ship mode (First Class / Second Class / Standard Class). The left end point of a bar indicates the booking day of the order, while the right end point indicates the dispatch day of the order. The difference between the dispatch day and the booking day (measured in terms of the number of days) is called the processing time of the order. For the same category, an order is considered for booking only after the previous order of the same category is dispatched. No two consecutive orders of the same category had identical ship mode during this period.

For example, there were only two orders in the furnishing category during this period. The first one was shipped in the Second Class. It was booked on Sep 1 and dispatched on Sep 5. The second order was shipped in the Standard class. It was booked on Sep 5 (although the order might have been placed before that) and dispatched on Sep 12. So the processing times were 4 and 7 days respectively for these orders.

What was the average processing time of all orders in the categories which had only one type of ship mode?

cat2021-set2 data-interpretation bar-graph numerical-answer

## 1.1.74 Bar Graph: CAT 2021 Set-2 | Data Interpretation and Logical Reasoning | Question: 3 top



The different bars in the diagram above provide information about different orders in various categories (Art, Binders, ...) that were booked in the first two weeks of September of a store for one client. The color and pattern of a bar denotes the ship mode (First Class / Second Class / Standard Class). The left end point of a bar indicates the booking day of the order, while the right end point indicates the dispatch day of the order. The difference between the dispatch day and the booking day (measured in

terms of the number of days) is called the processing time of the order. For the same category, an order is considered for booking only after the previous order of the same category is dispatched. No two consecutive orders of the same category had identical ship mode during this period.

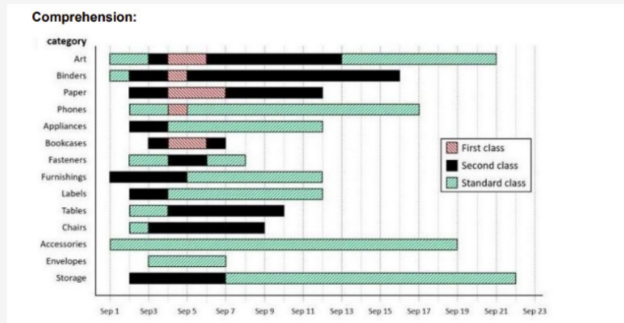
For example, there were only two orders in the furnishing category during this period. The first one was shipped in the Second Class. It was booked on Sep 1 and dispatched on Sep 5. The second order was shipped in the Standard class. It was booked on Sep 5 (although the order might have been placed before that) and dispatched on Sep 12. So the processing times were 4 and 7 days respectively for these orders.

The sequence of categories -- Art, Binders, Paper and Phones -- in decreasing order of average processing time of their orders in this period is:

A. Art, Binders, Paper, Phones
B. Phones, Art, Binders, Paper
C. Paper, Binders, Art, Phones
D. Phones, Binders, Art, Paper

cat2021-set2 data-interpretation bar-graph

## 1.1.75 Bar Graph: CAT 2021 Set-2 | Data Interpretation and Logical Reasoning | Question: 4 top



The different bars in the diagram above provide information about different orders in various categories (Art, Binders, ...) that were booked in the first two weeks of September of a store for one client. The color and pattern of a bar denotes the ship mode (First Class / Second Class / Standard Class). The left end point of a bar indicates the booking day of the order, while the right end point indicates the dispatch day of the order. The difference between the dispatch day and the booking day (measured in terms of the number of days) is called the processing time of the order. For the same category, an order is considered for booking only after the previous order of the same category is dispatched. No two consecutive orders of the same category had identical ship mode during this period.

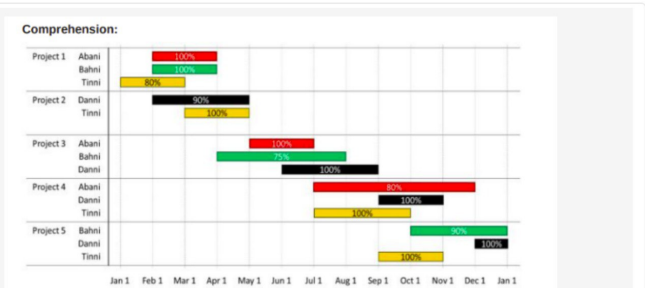
For example, there were only two orders in the furnishing category during this period. The first one was shipped in the Second Class. It was booked on Sep 1 and dispatched on Sep 5. The second order was shipped in the Standard class. It was booked on Sep 5 (although the order might have been placed before that) and dispatched on Sep 12. So the processing times were 4 and 7 days respectively for these orders.

Approximately what percentage of orders had a processing time of one day during the period Sep 1 to Sep 22 (both dates inclusive)?

A. 16%
B. 20%
C. 22%
D. 25%

cat2021-set2 data-interpretation bar-graph

## 1.1.76 Bar Graph: CAT 2021 Set-3 | Data Interpretation and Logical Reasoning | Question: 1 top



The figure above shows the schedule of four employees – Abani, Bahni, Danni and Tinni – whom Dhoni supervised in 2020. Altogether there were five projects which started and concluded in 2020 in which they were involved. For each of these

projects and for each employee, the starting day was at the beginning of a month and the concluding day was the end of a month, and these are indicated by the left and right end points of the corresponding horizontal bars. The number within each bar indicates the percentage of assigned work completed by the employee for that project, as assessed by Dhoni.

For each employee, his/her total project-month (in 2020) is the sum of the number of months (s)he worked across the five project, while his/her annual completion index is the weightage average of the completion percentage assigned from the different projects, with the weights being the corresponding number of months (s)he worked in these projects. For each project, the total employee-month is the sum of the number of months four employees worked in this project, while its completion index is the weightage average of the completion percentage assigned for the employees who worked in this project, with the weights being the corresponding number of months they worked in this project.

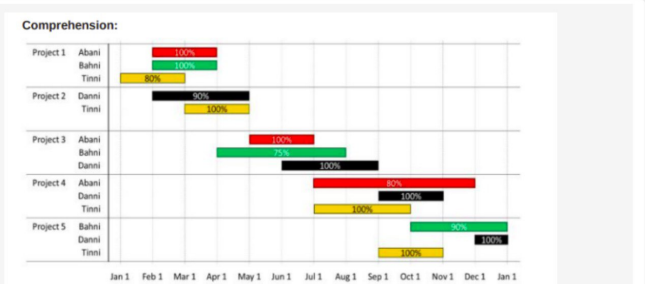
Which of the following statements is/are true?

I. The total project-month was the same for the four employees.
II. The total employee-month was the same for the five projects.

A. Only II B. Both I and II C. Neither I nor II D. Only I

cat2021-set3 data-interpretation bar-graph

## 1.1.77 Bar Graph: CAT 2021 Set-3 | Data Interpretation and Logical Reasoning | Question: 2 top



The figure above shows the schedule of four employees – Abani, Bahni, Danni and Tinni – whom Dhoni supervised in 2020. Altogether there were five projects which started and concluded in 2020 in which they were involved. For each of these projects and for each employee, the starting day was at the beginning of a month and the concluding day was the end of a month, and these are indicated by the left and right end points of the corresponding Horizontal bars. The number within each bar indicates the percentage of assigned work completed by the employee for that project, as assessed by Dhoni.

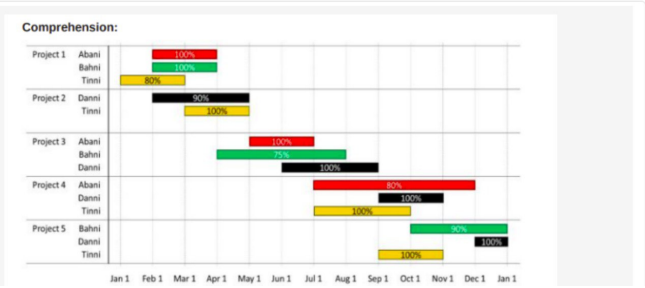
For each employee, his/her total project-month (in 2020) is the sum of the number of months (s)he worked across the five project, while his/her annual completion index is the weightage average of the completion percentage assigned from the different projects, with the weights being the corresponding number of months (s)he worked in these projects. For each project, the total employee-month is the sum of the number of months four employees worked in this project, while its completion index is the weightage average of the completion percentage assigned for the employees who worked in this project, with the weights being the corresponding number of months they worked in this project.

Which employees did not work in multiple projects for any of the months in 2020?

A. Only Tinni
B. Only Abani and Bahni
C. All four of them
D. Only Abani, Bahni and Danni

cat2021-set3 data-interpretation bar-graph

## 1.1.78 Bar Graph: CAT 2021 Set-3 | Data Interpretation and Logical Reasoning | Question: 3 top



The figure above shows the schedule of four employees – Abani, Bahni, Danni and Tinni – whom Dhoni supervised in 2020. Altogether there were five projects which started and concluded in 2020 in which they were involved. For each of these projects and for each employee, the starting day was at the beginning of a month and the concluding day was the end of a month, and these are indicated by the left and right end points of the corresponding Horizontal bars. The number within each bar indicates the percentage of assigned work completed by the employee for that project, as assessed by Dhoni.

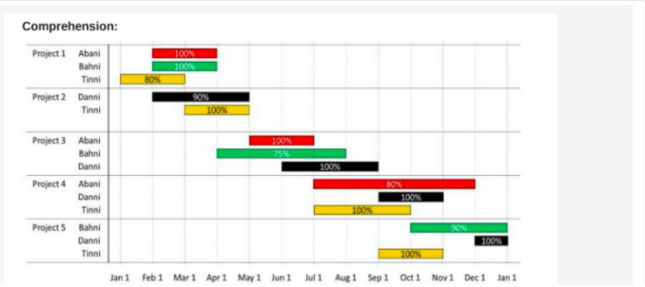
For each employee, his/her total project-month (in 2020) is the sum of the number of months (s)he worked across the five project, while his/her annual completion index is the weightage average of the completion percentage assigned from the different projects, with the weights being the corresponding number of months (s)he worked in these projects. For each project, the total employee-month is the sum of the number of months four employees worked in this project, while its completion index is the weightage average of the completion percentage assigned for the employees who worked in this project, with the weights being the corresponding number of months they worked in this project.

The project duration, measured in terms of the number of months, is the time during which at least one employee worked in the project. Which of the following pairs of the projects had the same duration?

A. Project 3, Project 4
B. Project 3, Project 5
C. Project 1, Project 5
D. Project 4, Project 5

cat2021-set3 data-interpretation bar-graph

## 1.1.79 Bar Graph: CAT 2021 Set-3 | Data Interpretation and Logical Reasoning | Question: 4 top



The figure above shows the schedule of four employees – Abani, Bahni, Danni and Tinni – whom Dhoni supervised in 2020. Altogether there were five projects which started and concluded in 2020 in which they were involved. For each of these projects and for each employee, the starting day was at the beginning of a month and the concluding day was the end of a month, and these are indicated by the left and right end points of the corresponding Horizontal bars. The number within each bar indicates the percentage of assigned work completed by the employee for that project, as assessed by Dhoni.

For each employee, his/her total project-month (in 2020) is the sum of the number of months (s)he worked across the five project, while his/her annual completion index is the weightage average of the completion percentage assigned from the different projects, with the weights being the corresponding number of months (s)he worked in these projects. For each project, the total employee-month is the sum of the number of months four employees worked in this project, while its completion index is the weightage average of the completion percentage assigned for the employees who worked in this project, with the weights being the corresponding number of months they worked in this project.

The list of employees in decreasing order of annual completion index is:

A. Danni, Tinni, Abani, Bahni
B. Tinni, Danni, Abani, Bahni
C. Danni, Tinni, Bahni, Abani
D. Bahni, Abani, Tinni, Danni

### 1.2.2 Data Interpretation: CAT 2010 | Question: 42 top

Depreciation as a percentage of total expenses is maximum in which industry sector ?

A. Chemical B. Diversified C. Electricity D. Machinery

cat2010 data-interpretation

### 1.2.3 Data Interpretation: CAT 2010 | Question: 43 top

Which industry sector has 'salaries' and 'wages' as 3rd largest item in its expenses?

A. Food
B. Services
C. Textiles & Food
D. Food & Machinery

cat2010 data-interpretation

### 1.2.4 Data Interpretation: CAT 2010 | Question: 44 top

If the industry sectors are ranked on the basis of 'Tax paid as a proportion of sales' in the ascending order, then which industry will be placed at ranked 3?

A. Machinery B. Electricity C. Food D. Diversified

cat2010 data-interpretation

### 1.2.5 Data Interpretation: CAT 2010 | Question: 45 top

If the ranking is based on Profit Before Tax in the descending order, subject to the condition that 'other expense' of all the industry sectors equals zero, then which of following statements is wrong?

A. Rank of chemical industry does not change
B. Rank of electricity industry declines
C. Diversified industry rank changes from 3rd to 4th
D. Rank of food industry changes from 5th to 6th

cat2010 data-interpretation

### 1.2.6 Data Interpretation: CAT 2017 Set-1 | Question: 43 top

Applicants for the doctoral programmes of Ambi Institute of Engineering (AIE) and Bambi Institute of Engineering (BIE) have to appear for a Common Entrance Test (CET). The test has three sections: Physics (P), Chemistry (C), and Maths (M). Among those appearing for CET, those at or above the 80th percentile in at least two sections, and at or above the 90th percentile overall, are selected for Advanced Entrance Test (AET) conducted by (AIE). AET is used by AIE for final selection.

For the 200 candidates who are at or above the 90th percentile over all based on CET, the following are known about their performance in CET:

1. No one is below the 80th percentile in all 3 sections.
2. 150 are at or above the 80th percentile in exactly two sections.
3. The number of candidates at or above the 80th percentile only in P is the same as the number of candidates at or above the 80th percentile only in C. The same is the number of candidates at or above the 80th percentile only in M.
4. Number of candidates below 80th percentile in P: Number of candidates below 80th percentile in C: Number of candidates below 80th percentile in $M = 4 : 2 : 1$.

BIE uses a different process for selection. If any candidate is appearing in the AET by AlE, BIE considers their AET score for final selection provided the candidate is at or above the 80th percentile in P. Any other candidate at or above the 80th percentile in P in CET, but who is not eligible for the AET, is required to appear in a separate test to be conducted by BIE for being considered for final selection. Altogether, there are 400 candidates this year who are at or above the 80th percentile in P.

What best can be concluded about the number of candidates sitting for the separate test for BIE who were at or above the 90th percentile overall in CET?

A. 3 or 10 B. 10 C. 5 D. 7 or 10

cat2017-1 data-interpretation

### 1.2.7 Data Interpretation: CAT 2017 Set-1 | Question: 44 top

Applicants for the doctoral programmes of Ambi Institute of Engineering (AIE) and Bambi Institute of Engineering (BIE) have to appear for a Common Entrance Test (CET). The test has three sections: Physics (P), Chemistry (C), and Maths (M). Among those appearing for CET, those at or above the 80th percentile in at least two sections, and at or above the 90th percentile overall, are selected for Advanced Entrance Test (AET) conducted by (AIE). AET is used by AIE for final selection.

For the 200 candidates who are at or above the 90th percentile over all based on CET, the following are known about their performance in CET:

1. No one is below the 80th percentile in all 3 sections.
2. 150 are at or above the 80th percentile in exactly two sections.
3. The number of candidates at or above the 80th percentile only in P is the same as the number of candidates at or above the 80th percentile only in C. The same is the number of candidates at or above the 80th percentile only in M.
4. Number of candidates below 80th percentile in P: Number of candidates below 80th percentile in C: Number of candidates below 80th percentile in M $= 4 : 2 : 1$.

BIE uses a different process for selection. If any candidate is appearing in the AET by AlE, BIE considers their AET score for final selection provided the candidate is at or above the 80th percentile in P. Any other candidate at or above the 80th percentile in P in CET, but who is not eligible for the AET, is required to appear in a separate test to be conducted by BIE for being considered for final selection. Altogether, there are 400 candidates this year who are at or above the 80th percentile in P.

If the number of candidates who are at or above the 90th percentile overall and also at or above the 80th percentile in all three sections in CET is actually a multiple of 5, what is the number of candidates who are at or above the 90th percentile overall and at or above the 80th percentile in both P and M in CET?

A. 59 B. 60 C. 61 D. 58

cat2017-1 data-interpretation

### 1.2.8 Data Interpretation: CAT 2017 Set-1 | Question: 45 top

Applicants for the doctoral programmes of Ambi Institute of Engineering (AIE) and Bambi Institute of Engineering (BIE) have to appear for a Common Entrance Test (CET). The test has three sections: Physics (P), Chemistry (C), and Maths (M). Among those appearing for CET, those at or above the 80th percentile in at least two sections, and at or above the 90th percentile overall, are selected for Advanced Entrance Test (AET) conducted by (AIE). AET is used by AIE for final selection.

For the 200 candidates who are at or above the 90th percentile over all based on CET, the following are known about their performance in CET:

1. No one is below the 80th percentile in all 3 sections.
2. 150 are at or above the 80th percentile in exactly two sections.
3. The number of candidates at or above the 80th percentile only in P is the same as the number of candidates at or above the 80th percentile only in C. The same is the number of candidates at or above the 80th percentile only in M.
4. Number of candidates below 80th percentile in P: Number of candidates below 80th percentile in C: Number of candidates below 80th percentile in M $= 4 : 2 : 1$.

BIE uses a different process for selection. If any candidate is appearing in the AET by AlE, BIE considers their AET score for final selection provided the candidate is at or above the 80th percentile in P. Any other candidate at or above the 80th percentile in P in CET, but who is not eligible for the AET, is required to appear in a separate test to be conducted by BIE for being considered for final selection. Altogether, there are 400 candidates this year who are at or above the 80th percentile in P.

If the number of candidates who are at or above the 90th percentile overall and also at or above the 80th percentile in all three sections in CET is actually a multiple of 5, then how many candidates were shortlisted for the AET for AIE?

A. 170 B. 169 C. 159 D. .160

cat2017-1 data-interpretation

### 1.2.9 Data Interpretation: CAT 2017 Set-1 | Question: 46 top

Applicants for the doctoral programmes of Ambi Institute of Engineering (AIE) and Bambi Institute of Engineering (BIE) have to appear for a Common Entrance Test (CET). The test has three sections: Physics (P), Chemistry (C), and Maths

(M). Among those appearing for CET, those at or above the 80th percentile in at least two sections, and at or above the 90th percentile overall, are selected for Advanced Entrance Test (AET) conducted by (AIE). AET is used by AIE for final selection.

For the 200 candidates who are at or above the 90th percentile over all based on CET, the following are known about their performance in CET:

1. No one is below the 80th percentile in all 3 sections.
2. 150 are at or above the 80th percentile in exactly two sections.
3. The number of candidates at or above the 80th percentile only in P is the same as the number of candidates at or above the 80th percentile only in C. The same is the number of candidates at or above the 80th percentile only in M.
4. Number of candidates below 80th percentile in P: Number of candidates below 80th percentile in C: Number of candidates below 80th percentile in $M = 4 : 2 : 1$.

BIE uses a different process for selection. If any candidate is appearing in the AET by AlE, BIE considers their AET score for final selection provided the candidate is at or above the 80th percentile in P. Any other candidate at or above the 80th percentile in P in CET, but who is not eligible for the AET, is required to appear in a separate test to be conducted by BIE for being considered for final selection. Altogether, there are 400 candidates this year who are at or above the 80th percentile in P.

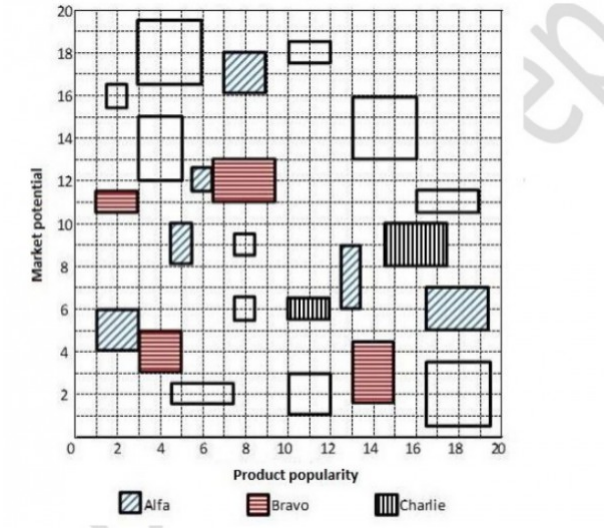
If the number of candidates who are at or above the 90th percentile overall and also are at or above the 80th percentile in P in CET, is more than 100, how many candidates had to sit for the separate test for BIE?

A. 299 B. 310 C. 321 D. 330

cat2017-1 data-interpretation

### 1.2.10 Data Interpretation: CAT 2018 Set-2 | Question: 35 top

Each of the 23 boxes in the picture below represents a product manufactured by one of the following three companies: Alfa, Bravo and Charlie. The area of a box is proportional to the revenue from the corresponding product, while its centre represents the Product popularity and Market potential scores of the product (out of 20). The shadings of some of the boxes have got erased.



The companies classified their products into four categories based on a combination of scores (out of 20) on the two parameters-Product popularity and Market potential as given below:

| | Promising | Blockbuster | Doubtful | No-hope |
|---|---|---|---|---|
| Product popularity score | $>10$ | $>10$ | $\leq 10$ | $\leq 10$ |
| Market potential score | $>10$ | $\leq 10$ | $>10$ | $\leq 10$ |

The following facts are known:

1. Alfa and Bravo had the same number of products in the Blockbuster category.
2. Charlie had more products than Bravo but fewer products than Alfa in the No-hope category.
3. Each company had an equal number of products in the Promising category.
4. Charlie did not have any product in the Doubtful category, while Alfa had one product more than Bravo in this category.
5. Bravo had a higher revenue than Alfa from products in the Doubtful category.
6. Charlie had a higher revenue than Bravo from products in the Blockbuster category.
7. Bravo and Charlie had the same revenue from products in the No-hope category.

8. Alfa and Charlie had the same total revenue considering all products.

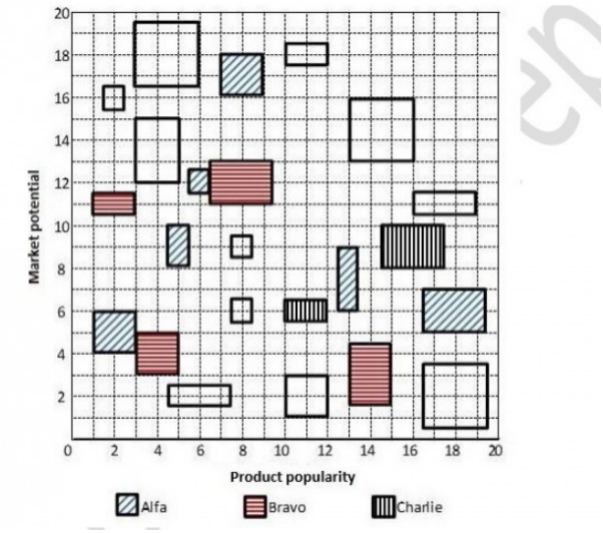
Considering all companies products, which product category had the highest revenue?

A. Doubtful B. Promising C. No-hope D. blockbuster

cat2018-2 data-interpretation

## 1.2.11 Data Interpretation: CAT 2018 Set-2 | Question: 36 top

Each of the 23 boxes in the picture below represents a product manufactured by one of the following three companies: Alfa, Bravo and Charlie. The shadings of some of the boxes have got erased.



The companies classified their products into four categories based on a combination of scores (out of 20) on the two parameters-Product popularity and Market potential as given below:

| | Promising | Blockbuster | Doubtful | No-hope |
|---|---|---|---|---|
| Product popularity score | $>10$ | $>10$ | $\leq 10$ | $\leq 10$ |
| Market potential score | $>10$ | $\leq 10$ | $>10$ | $\leq 10$ |

The following facts are known:

1. Alfa and Bravo had the same number of products in the Blockbuster category.
2. Charlie had more products than Bravo but fewer products than Alfa in the No-hope category.
3. Each company had an equal number of products in the Promising category.
4. Charlie did not have any product in the Doubtful category, while Alfa had one product more than Bravo in this category.
5. Bravo had a higher revenue than Alfa from products in the Doubtful category.
6. Charlie had a higher revenue than Bravo from products in the Blockbuster category.
7. Bravo and Charlie had the same revenue from products in the No-hope category.
8. Alfa and Charlie had the same total revenue considering all products.

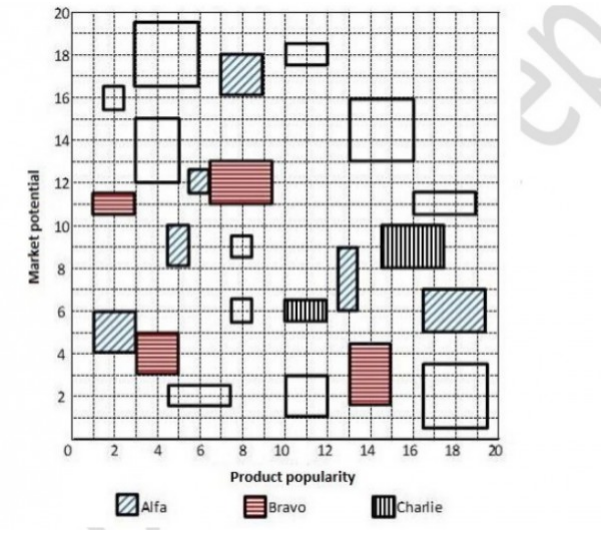
Which of the following is the correct sequence of numbers of products Bravo had in No-hope, Doubtful, Promising and Blockbuster categories respectively?

A. $1, 3, 1, 3$ B. $1, 3, 1, 2$ C. $2, 3, 1, 2$ D. $3, 3, 1, 2$

cat2018-2 data-interpretation

## 1.2.12 Data Interpretation: CAT 2018 Set-2 | Question: 37 top

Each of the 23 boxes in the picture below represents a product manufactured by one of the following three companies: Alfa, Bravo and Charlie. The area of a box is proportional to the revenue from the corresponding product, while its centre represents the Product popularity and Market potential scores of the product (out of 20). The shadings of some of the boxes have got erased.



The companies classified their products into four categories based on a combination of scores (out of 20) on the two parameters-Product popularity and Market potential as given below:

| | Promising | Blockbuster | Doubtful | No-hope |
|---|---|---|---|---|
| Product popularity score | $>10$ | $>10$ | $\leq 10$ | $\leq 10$ |
| Market potential score | $>10$ | $\leq 10$ | $>10$ | $\leq 10$ |

The following facts are known:

1. Alfa and Bravo had the same number of products in the Blockbuster category.
2. Charlie had more products than Bravo but fewer products than Alfa in the No-hope category.
3. Each company had an equal number of products in the Promising category.
4. Charlie did not have any product in the Doubtful category, while Alfa had one product more than Bravo in this category.
5. Bravo had a higher revenue than Alfa from products in the Doubtful category.
6. Charlie had a higher revenue than Bravo from products in the Blockbuster category.
7. Bravo and Charlie had the same revenue from products in the No-hope category.
8. Alfa and Charlie had the same total revenue considering all products.

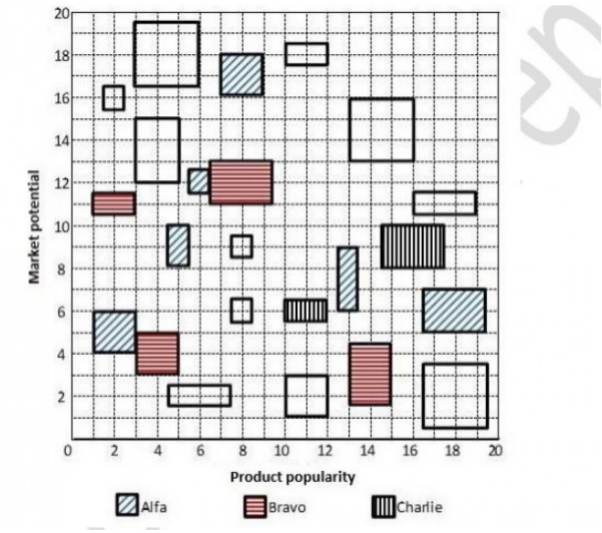
Which of the following statements is NOT correct?

A. Bravo's revenue from Blockbuster products was greater than Alfa's revenue from Doubtful products
B. The total revenue from No-hope products was less than the total revenue from Doubtful products
C. Bravo and Charlie had the same revenues from No-hope products
D. Alfa's revenue from Blockbuster products was the same as Charlie's revenue from Promising products

cat2018-2 data-interpretation

### 1.2.13 Data Interpretation: CAT 2018 Set-2 | Question: 38 top

Each of the 23 boxes in the picture below represents a product manufactured by one of the following three companies: Alfa, Bravo and Charlie. The area of a box is proportional to the revenue from the corresponding product, while its centre represents the Product popularity and Market potential scores of the product (out of 20). The shadings of some of the boxes have got erased.



The companies classified their products into four categories based on a combination of scores (out of 20) on the two parameters-Product popularity and Market potential as given below:

| | Promising | Blockbuster | Doubtful | No-hope |
|---|---|---|---|---|
| Product popularity score | $>10$ | $>10$ | $\leq 10$ | $\leq 10$ |
| Market potential score | $>10$ | $\leq 10$ | $>10$ | $\leq 10$ |

The following facts are known:

1. Alfa and Bravo had the same number of products in the Blockbuster category.
2. Charlie had more products than Bravo but fewer products than Alfa in the No-hope category.
3. Each company had an equal number of products in the Promising category.
4. Charlie did not have any product in the Doubtful category, while Alfa had one product more than Bravo in this category.
5. Bravo had a higher revenue than Alfa from products in the Doubtful category.
6. Charlie had a higher revenue than Bravo from products in the Blockbuster category.
7. Bravo and Charlie had the same revenue from products in the No-hope category.
8. Alfa and Charlie had the same total revenue considering all products.

If the smallest box on the grid is equivalent to revenue of Rs. 1 crore, then what approximately was the total revenue of Bravo in Rs. crore?

A. 40 B. 24 C. 30 D. 34

cat2018-2 data-interpretation

## 1.2.14 Data Interpretation: CAT 2018 Set-2 | Question: 39 top

There are only four brands of entry level smartphones called Azra, Bysi, Cxqi, and Dipq in a country.

Details about their market share, unit selling price, and profitability (defined as the profit as a percentage of the revenue) for the year 2016 are given in the table below:

In 2017, sales volume of entry level smartphones grew by 40% as compared to that in 2016. Cxqi offered a 40% discount on its unit selling price in 2017, which resulted in a 15% increase in its market share. Each of the other three brands lost 5% market share. However, the profitability of Cxqi came down to half of its value in 2016. The unit selling prices of the other three brands and their profitability values remained the same in 2017 as they were in 2016.

The brand that had the highest revenue in 2016 is:

A. Dipq B. Bysi C. Cxqi D. Azra

cat2018-2 data-interpretation

## 1.2.15 Data Interpretation: CAT 2018 Set-2 | Question: 40 top

There are only four brands of entry level smartphones called Azra, Bysi, Cxqi, and Dipq in a country.

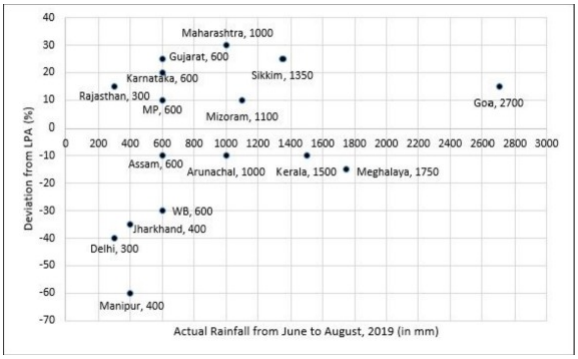
## 1.3 Graphical Data (4) top

### 1.3.1 Graphical Data: CAT 2019 Set-2 | Question: 55 top

To compare the rainfall data, India Meteorological Department (IMD) calculated the Long Period Average (LPA) of rainfall during period June-August for each of the 16 states. The figure given below shows the actual rainfall (measured in mm) during June-August, 2019 and the percentage deviations from LPA of respective states in 2018. Each state along with its actual rainfall is presented in the figure.



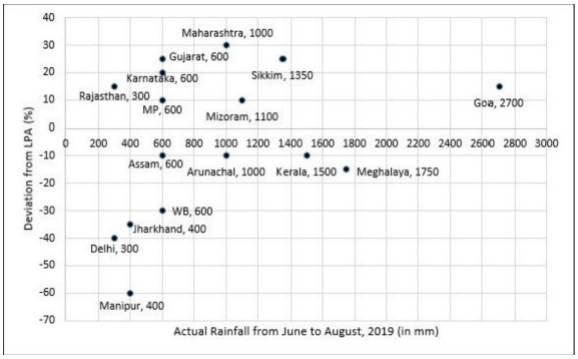
If a 'Heavy Monsoon State' is defined as a state with actual rainfall from June-August, 2019 of 900 mm or more, then approximately what percentage of 'Heavy Monsoon States' have a negative deviation from respective LPAs in 2019?

A. 14.29 B. 57.14 C. 42.86 D. 75.00

cat2019-2 data-interpretation graphical-data

## 1.3.2 Graphical Data: CAT 2019 Set-2 | Question: 56 top

To compare the rainfall data, India Meteorological Department (IMD) calculated the Long Period Average (LPA) of rainfall during period June-August for each of the 16 states. The figure given below shows the actual rainfall (measured in mm) during June-August, 2019 and the percentage deviations from LPA of respective states in 2018. Each state along with its actual rainfall is presented in the figure.



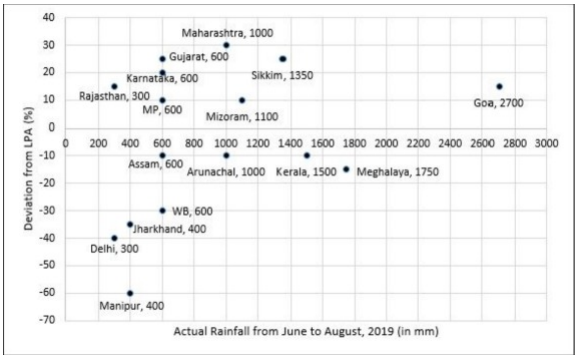
If a 'Low Monsoon State' is defined as a state with actual rainfall from June- August, 2019 of 750 mm or less, then what is the median 'deviation from LPA' (as defined in the Y-axis of the figure) of 'Low Monsoon States'?

A. $-10\%$ B. $-30\%$ C. $-20\%$ D. $10\%$

cat2019-2 data-interpretation graphical-data

## 1.3.3 Graphical Data: CAT 2019 Set-2 | Question: 57 top

To compare the rainfall data, India Meteorological Department (IMD) calculated the Long Period Average (LPA) of rainfall during period June-August for each of the 16 states. The figure given below shows the actual rainfall (measured in mm) during June-August, 2019 and the percentage deviations from LPA of respective states in 2018. Each state along with its actual rainfall is presented in the figure.



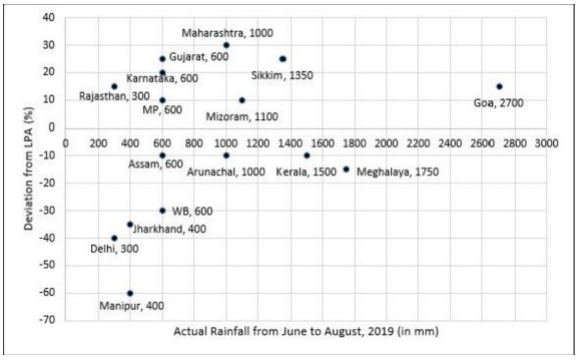
What is the average rainfall of all states that have actual rainfall of 600 mm or less in 2019 and have a negative deviation from LPA?

A. 500 mm B. 460 mm C. 367 mm D. 450 mm

cat2019-2 data-interpretation graphical-data

## 1.3.4 Graphical Data: CAT 2019 Set-2 | Question: 58 top

To compare the rainfall data, India Meteorological Department (IMD) calculated the Long Period Average (LPA) of rainfall during period June-August for each of the 16 states. The figure given below shows the actual rainfall (measured in mm) during June-August, 2019 and the percentage deviations from LPA of respective states in 2018. Each state along with its actual rainfall is presented in the figure.



The LPA of a state for a year is defined as the average rainfall in the preceding $10$ years considering the period of June-August. For example, LPA in $2018$ is the average rainfall during $2009-2018$ and LPA in $2019$ is the average rainfall during $2010-2019$. It is also observed that the actual rainfall in Gujarat in $2019$ is $20\%$ more than the rainfall in $2009$. The LPA of Gujarat in $2019$ is closest to

A. $525$mm B. $490$mm C. $475$mm D. $505$mm

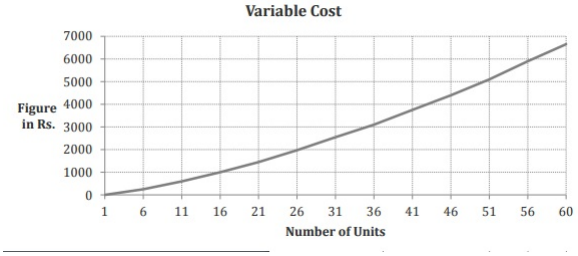
cat2019-2 data-interpretation graphical-data

## 1.4 Line Graph (36) top

### 1.4.1 Line Graph: CAT 2000 | Question: 160 top

**Answer the following question based on the information given below.**

ABC Ltd. produces widgets for which the demand is unlimited and they can sell all of their production. The graph below describes the monthly variable costs incurred by the company as a function of the quantity produced. In addition, operating the plant for one shift results in a fixed monthly cost of Rs. $800$. Fixed monthly costs for second shift operation are estimated at Rs. $1200$. Each shift operation provides capacity for producing $30$ widgets per month.
Note : Average unit cost, AC $=$ Total monthly costs/monthly production, and Marginal cost, MC is the rate of change in total cost for unit change in quantity produced.



Total production in July is $40$ units. What is the approximate average unit cost for July?

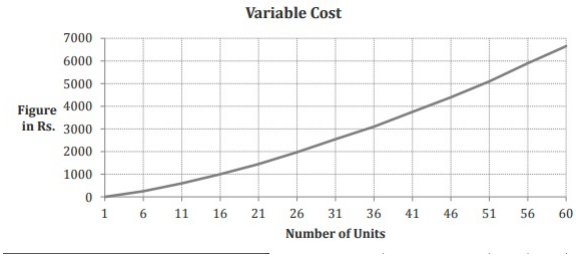
A. $3600$ B. $90$ C. $140$ D. $115$

cat2000 data-interpretation line-graph

### 1.4.2 Line Graph: CAT 2000 | Question: 161 top

**Answer the following question based on the information given below.**

ABC Ltd. produces widgets for which the demand is unlimited and they can sell all of their production. The graph below describes the monthly variable costs incurred by the company as a function of the quantity produced. In addition, operating the plant for one shift results in a fixed monthly cost of Rs. $800$. Fixed monthly costs for second shift operation are estimated at Rs. $1200$. Each shift operation provides capacity for producing $30$ widgets per month.
Note : Average unit cost, AC $=$ Total monthly costs/monthly production, and Marginal cost, MC is the rate of change in total cost for unit change in quantity produced.



ABC Ltd. is considering increasing the production level. What is the approximate marginal cost of increasing production from its July level of 40 units?

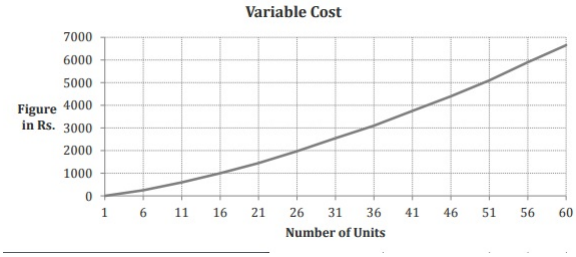
A. 110 B. 130 C. 240 D. 160

cat2000 data-interpretation line-graph

## 1.4.3 Line Graph: CAT 2000 | Question: 162 top

**Answer the following question based on the information given below.**

ABC Ltd. produces widgets for which the demand is unlimited and they can sell all of their production. The graph below describes the monthly variable costs incurred by the company as a function of the quantity produced. In addition, operating the plant for one shift results in a fixed monthly cost of Rs. 800. Fixed monthly costs for second shift operation are estimated at Rs. 1200. Each shift operation provides capacity for producing 30 widgets per month.
Note : Average unit cost, AC = Total monthly costs/monthly production, and Marginal cost, MC is the rate of change in total cost for unit change in quantity produced.



From the data provided it can be inferred that, for production levels in the range of 0 to 60 units.

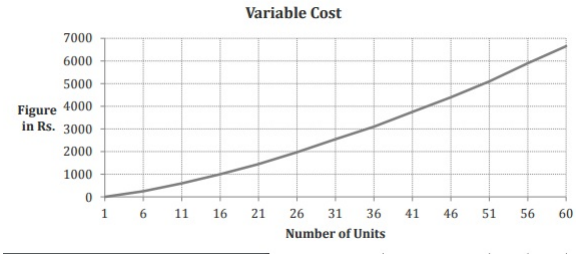
A. MC is an increasing function of production quantity.
B. MC is a decreasing function of production quantity.
C. Initially MC is a decreasing function of production quantity, attains a minimum and then it is an increasing function of production quantity.
D. None of the above.

cat2000 data-interpretation line-graph

## 1.4.4 Line Graph: CAT 2000 | Question: 163 top

**Answer the following question based on the information given below.**

ABC Ltd. produces widgets for which the demand is unlimited and they can sell all of their production. The graph below describes the monthly variable costs incurred by the company as a function of the quantity produced. In addition, operating the plant for one shift results in a fixed monthly cost of Rs. 800. Fixed monthly costs for second shift operation are estimated at Rs. 1200. Each shift operation provides capacity for producing 30 widgets per month.
Note : Average unit cost, AC = Total monthly costs/monthly production, and Marginal cost, MC is the rate of change in total cost for unit change in quantity produced.



Suppose that each widget sells for Rs 150. What is the profit earned by ABC Ltd. in July? (Profit is defined as the excess of sales revenue over total cost.)

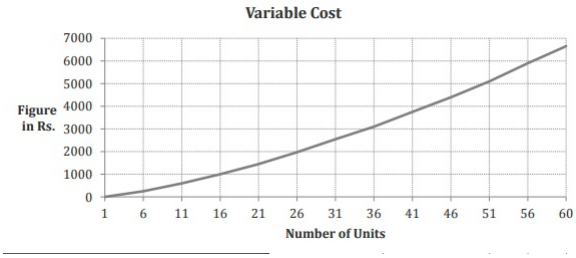
A. 2400 B. 1600 C. 400 D. 0

cat2000 data-interpretation line-graph

## 1.4.5 Line Graph: CAT 2000 | Question: 164 top

**Answer the following question based on the information given below.**

ABC Ltd. produces widgets for which the demand is unlimited and they can sell all of their production. The graph below describes the monthly variable costs incurred by the company as a function of the quantity produced. In addition, operating the plant for one shift results in a fixed monthly cost of Rs. 800. Fixed monthly costs for second shift operation are estimated at Rs. 1200. Each shift operation provides capacity for producing 30 widgets per month.
Note : Average unit cost, AC = Total monthly costs/monthly production, and Marginal cost, MC is the rate of change in total cost for unit change in quantity produced.



Assume that the unit price is Rs. 150 and profit is defined as the excess of sales revenue over total costs. What is the monthly production level of ABC Ltd. at which the profit is highest?

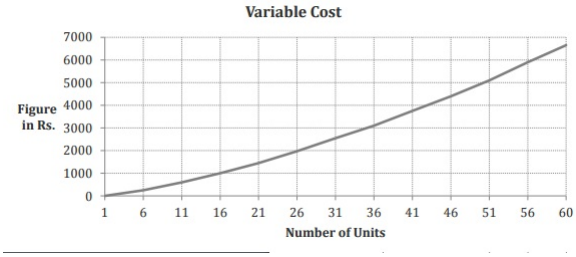
A. 30 B. 50 C. 60 D. 40

cat2000 data-interpretation line-graph

## 1.4.6 Line Graph: CAT 2000 | Question: 165 top

**Answer the following question based on the information given below.**

ABC Ltd. produces widgets for which the demand is unlimited and they can sell all of their production. The graph below describes the monthly variable costs incurred by the company as a function of the quantity produced. In addition, operating the plant for one shift results in a fixed monthly cost of Rs. 800. Fixed monthly costs for second shift operation are estimated at Rs. 1200. Each shift operation provides capacity for producing 30 widgets per month.
Note : Average unit cost, AC = Total monthly costs/monthly production, and Marginal cost, MC is the rate of change in total cost for unit change in quantity produced.



For monthly production level in the range of 0to 30 units

A. AC is always higher than MC.
B. AC is always lower than MC.
C. AC is lower than MC up to a certain level and then is higher than MC.
D. None of the above is true.

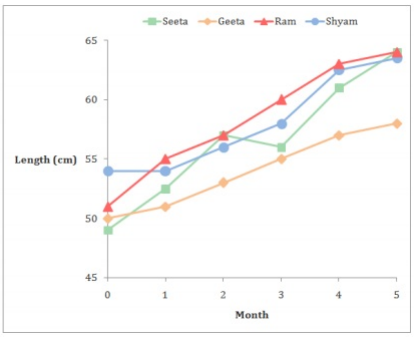
cat2000 data-interpretation line-graph

## 1.4.7 Line Graph: CAT 2003 | Question: 1-54 top

**Answer the question on the basis of the information given below:**

The length of an infant is one of the measures of his/her development in the early stages of his/her life. The figure below shows

the growth chart of four infants in the first five months of life.



After which month did Seeta's rate of growth start to decline?

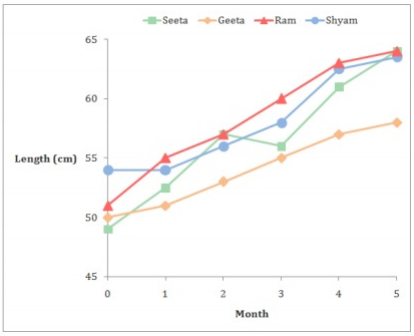
A. Second month
B. Third month
C. Fourth month
D. Never

cat2003-1 data-interpretation line-graph

## 1.4.8 Line Graph: CAT 2003 | Question: 1-55 top

**Answer the question on the basis of the information given below:**

The length of an infant is one of the measures of his/her development in the early stages of his/her life. The figure below shows the growth chart of four infants in the first five months of life.



Who grew at the fastest rate in the first two months of life?

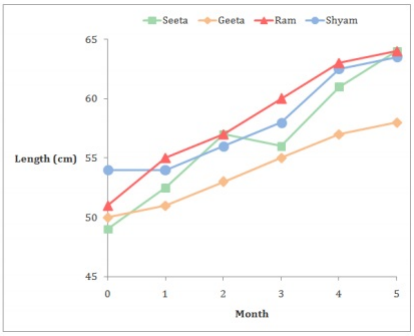
A. Geetha
B. Seetha
C. Ram
D. Shyam

cat2003-1 data-interpretation line-graph

## 1.4.9 Line Graph: CAT 2003 | Question: 1-56 top

**Answer the question on the basis of the information given below:**

The length of an infant is one of the measures of his/her development in the early stages of his/her life. The figure below shows the growth chart of four infants in the first five months of life.



The rate of growth during the third month was lower for _____

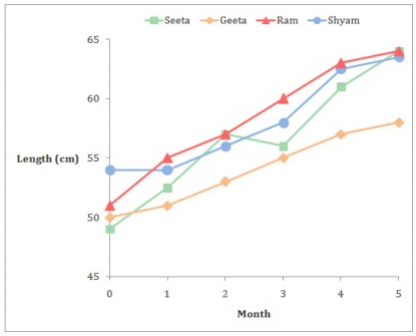
A. Geetha
B. Seetha
C. Ram
D. Shyam

cat2003-1 data-interpretation line-graph

## 1.4.10 Line Graph: CAT 2003 | Question: 1-57 top

**Answer the question on the basis of the information given below:**

The length of an infant is one of the measures of his/her development in the early stages of his/her life. The figure below shows the growth chart of four infants in the first five months of life.



Among the four infants, who grew the least in the first five months of life?

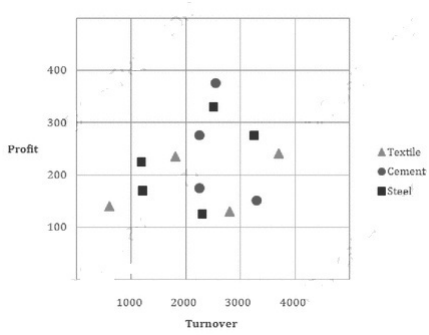
A. Geetha B. Seetha C. Ram D. Shyam

cat2003-1 data-interpretation line-graph

## 1.4.11 Line Graph: CAT 2003 | Question: 1-67 top

**Answer the question on the basis of the information given below:**

Each point in the graph shows the profit and the turnover data for a company. Each company belongs to one of three industries: textile, cement and steel.



For how many company does the profit exceed 10% of turnover?

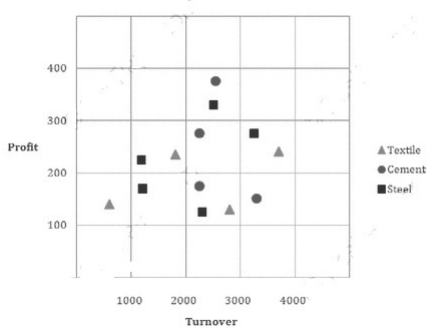
A. 8 B. 7 C. 6 D. 5

cat2003-1 data-interpretation line-graph

## 1.4.12 Line Graph: CAT 2003 | Question: 1-68 top

**Answer the question on the basis of the information given below:**

Each point in the graph shows the profit and the turnover data for a company. Each company belongs to one of three industries: textile, cement and steel.



For how many steel companies with a turnover of more than 2000 is the profit less than 300?

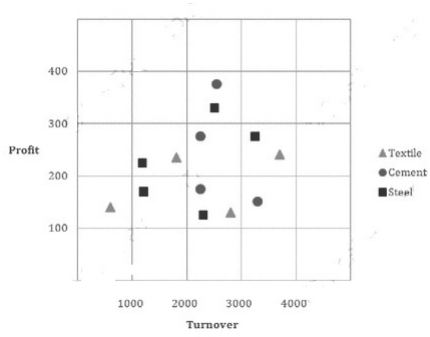
A. 0 B. 1 C. 2 D. 7

cat2003-1 data-interpretation line-graph

## 1.4.13 Line Graph: CAT 2003 | Question: 1-69 top

**Answer the question on the basis of the information given below:**

Each point in the graph shows the profit and the turnover data for a company. Each company belongs to one of three industries: textile, cement and steel.



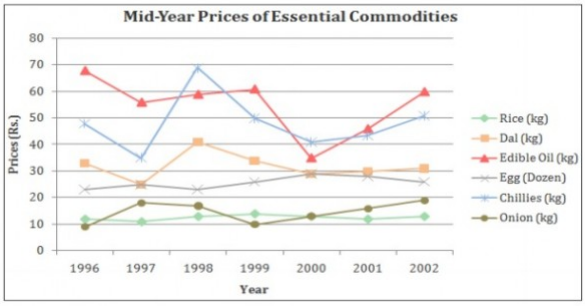
An investor wants to buy stock of only steel or cement companies with a turnover more than 1000 and profit exceeding 10% of turnover. How many choices are available to the investor?

A. 4 B. 5 C. 6 D. 7

cat2003-1 data-interpretation line-graph

## 1.4.14 Line Graph: CAT 2003 | Question: 2-148 top

**Answer the questions on the basis of the data presented in the figure below:**



During 1996 – 2002, the number of commodities that exhibited a net overall increase and a net overall decrease, respectively, were

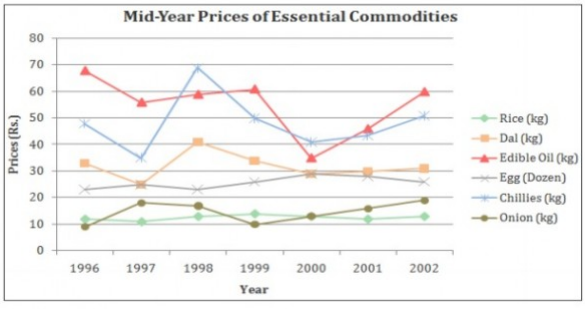
A. 3 and 3 B. 2 and 4 C. 4 and 2 D. 5 and 1

cat2003-2 data-interpretation line-graph

Answer key

## 1.4.15 Line Graph: CAT 2003 | Question: 2-149 top

**Answer the question on the basis of the data presented in the figure below:**



The number of commodities that experienced a price decline for two or more consecutive years is

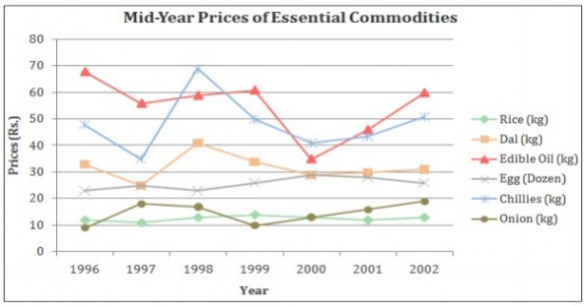
A. 2 B. 3 C. 4 D. 5

cat2003-2 data-interpretation line-graph

Answer key

## 1.4.16 Line Graph: CAT 2003 | Question: 2-150 top

**Answer the question on the basis of the data presented in the figure below:**



For which commodities did a price increase immediately follow a price decline only once in this period?

A. Rice, Edible oil, and Dal
B. Egg and Dal
C. Onion only
D. Egg and Onion

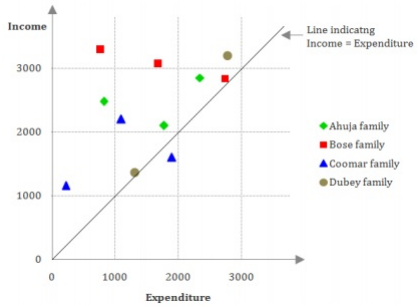
cat2003-2 data-interpretation line-graph

Answer key

## 1.4.17 Line Graph: CAT 2004 | Question: 09 top

**Answer the questions based on the information given below:**

The data point in the figure below represent monthly income and expenditure data of individual members of the Ahuja family, the Bose family , the Coomar family, and the Dubey family.



For these questions, savings is defined as

Savings = income-expenditure

Which family has the highest average expenditure?

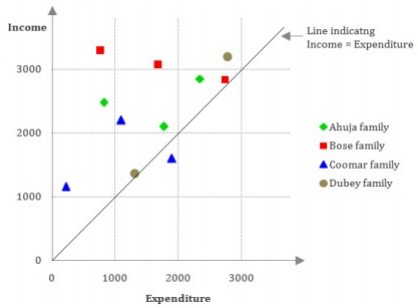
A. Ahuja B. Bose C. Coomer D. Dubey

cat2004 data-interpretation line-graph

## 1.4.18 Line Graph: CAT 2004 | Question: 10 top

**Answer the questions based on the information given below:**

The data point in the figure below represent monthly income and expenditure data of individual members of the Ahuja family, the Bose family , the Coomar family, and the Dubey family.



For these questions, savings is defined as

Savings = income-expenditure

Which family has the lowest average income?

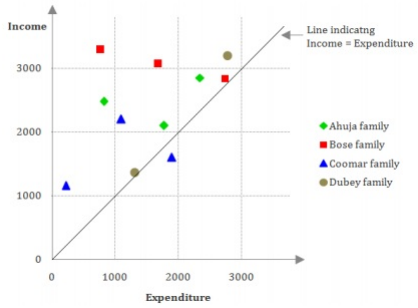
A. Ahuja B. Bose C. Coomer D. Dubey

cat2004 data-interpretation line-graph

## 1.4.19 Line Graph: CAT 2004 | Question: 11 top

**Answer the questions based on the information given below:**

The data point in the figure below represent monthly income and expenditure data of individual members of the Ahuja family, the Bose family , the Coomar family, and the Dubey family.



For these questions, savings is defined as

Savings = income-expenditure

The highest amount of savings accrues to a member of which family?

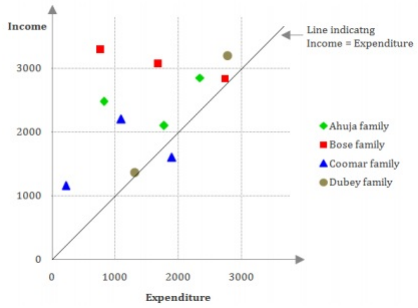
A. Ahuja B. Bose C. Coomer D. Dubey

cat2004 data-interpretation line-graph

## 1.4.20 Line Graph: CAT 2004 | Question: 12 top

**Answer the questions based on the information given below:**

The data point in the figure below represent monthly income and expenditure data of individual members of the Ahuja family, the Bose family , the Coomar family, and the Dubey family.



For these questions, savings is defined as

Savings = income-expenditure

Which family has the lowest average savings?

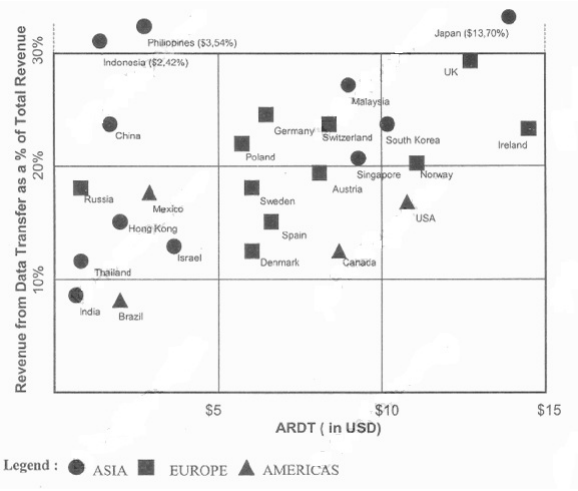
A. Ahuja B. Bose C. Coomer D. Dubey

cat2004 data-interpretation line-graph

## 1.4.21 Line Graph: CAT 2008 | Question: 45 top

Answer the following questions based on the information given below.

The telecom operators get revenue from transfer of data and voice. Average revenue received from transfer of each unit of data is known as ARDT. In the diagram below, the revenue received from data transfer as percentage of total revenue received and the ARDT in US Dollars (USD) are given for various countries.



It is expected that by 2010, revenue from data transfer as a percentage of total revenue will triple for India and double for Sweden. Assume that in 2010, the total revenue in India is twice that of Sweden and that the volume of data transfer is the same in both the countries. What is the percentage increase of ARDT in India if there is no change in ARDT in Sweden?

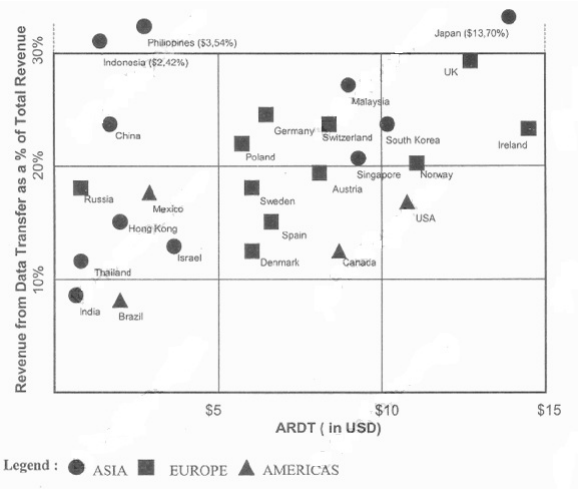
A. 400%
B. 550%
C. 800%
D. 950%
E. cannot be determined

cat2008 data-interpretation line-graph

## 1.4.22 Line Graph: CAT 2008 | Question: 46 top

Answer the following questions based on the information given below.

The telecom operators get revenue from transfer of data and voice. Average revenue received from transfer of each unit of data is known as ARDT. In the diagram below, the revenue received from data transfer as percentage of total revenue received and the ARDT in US Dollars (USD) are given for various countries.



If the total revenue received is the same for the pairs of countries listed in the choices below, choose the pair that has approximately same volume of data transfer

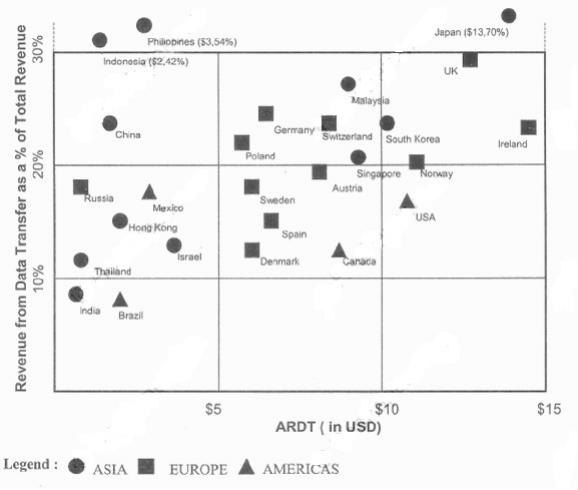
A. Philippines and Austria B. Canada and Poland C. Germany and USA D. UK and Spain E. Denmark and Mexico

cat2008 data-interpretation line-graph

## 1.4.23 Line Graph: CAT 2008 | Question: 47 top

Answer the following questions based on the information given below.

The telecom operators get revenue from transfer of data and voice. Average revenue received from transfer of each unit of data is known as ARDT. In the diagram below, the revenue received from data transfer as percentage of total revenue received and the ARDT in US Dollars (USD) are given for various countries.



It was found that the volume of data transfer in India is the same as that of Singapore. Then which of the following statements is true?

A. Total revenue is same in both countries
B. Total revenue in India is about $2$ times of that of Singapore
C. Total revenue in India is about $4$ times of that of Singapore
D. Total revenue in Singapore is about $2$ times of that of India
E. Total revenue in Singapore is about $4$ times of that of India

cat2008 data-interpretation line-graph

## 1.4.24 Line Graph: CAT 2010 | Question: 19 top

A line graph on a graph sheet shows the revenue for each year from $1990$ through $1998$ by points and joints the successive points by straight line segments. The point for revenue of $1990$ is labeled $\mathrm{A}$, that for $1991$ as $\mathrm{B}$, and that for $1992$ as $\mathrm{C}$. What is the ratio of growth in revenue between $1991-92$ and $1990-91$?

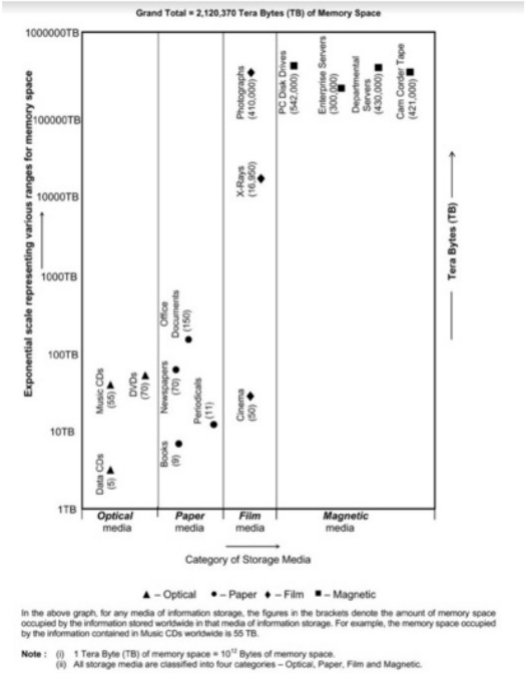
Statement I: The angle between $\mathrm{AB}$ and $x$- axis when measured with a protractor is $40$ degrees, and the angle between $\mathrm{CB}$ and $x$-axis is $80$ degrees.

Statement II: The scale of $y$-axis is $1$ cm = $1000$.

cat2010 data-interpretation line-graph

## 1.4.25 Line Graph: CAT 2013 | Question: 6 top

Summary of the estimate of memory space occupied by the information worldwide, stored in various storage media, in the year $2000$



In the above graph, for any media of information storage, the figures in the brackets denote the amount of memory space occupied by the information stored worldwide in that media of information storage. For example, the memory space occupied by the information contained in Music CDs worldwide is $55$ TB.

Note:

i. $1$ Tera Byte (TB) of memory space $= 10^{12}$ Bytes of memory space.
ii. All storage media are classified into four categories – Optical, Paper, Film and Magnetic

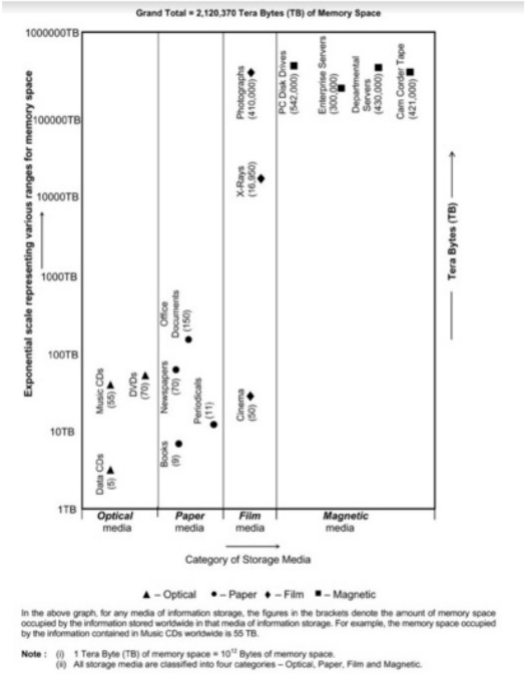
If the information contained in each X-Ray occupies $30$ MB of memory space on an average, and by using a new technology each X-Ray is now stored in magnetic media that saves $60\%$ of the memory space required, what is the total amount of memory space of magnetic media that saves $60\%$ of teh memory space required to store all the X-Rays available in the year $2000$. ($1$ MB $= 10^6$ Bytes of memory space)

A. $10,170$ TB B. $6,780$ TB C. $1,703,170$ TB D. None of these

cat2013 data-interpretation line-graph

## 1.4.26 Line Graph: CAT 2013 | Question: 7 top

Summary of the estimate of memory space occupied by the information worldwide, stored in various storage media, in the year $2000$



In the above graph, for any media of information storage, the figures in the brackets denote the amount of memory space occupied by the information stored worldwide in that media of information storage. For example, the memory space occupied by the information contained in Music CDs worldwide is $55$ TB.

Note:

i. $1$ Tera Byte (TB) of memory space $= 10^{12}$ Bytes of memory space.
ii. All storage media are classified into four categories – Optical, Paper, Film and Magnetic

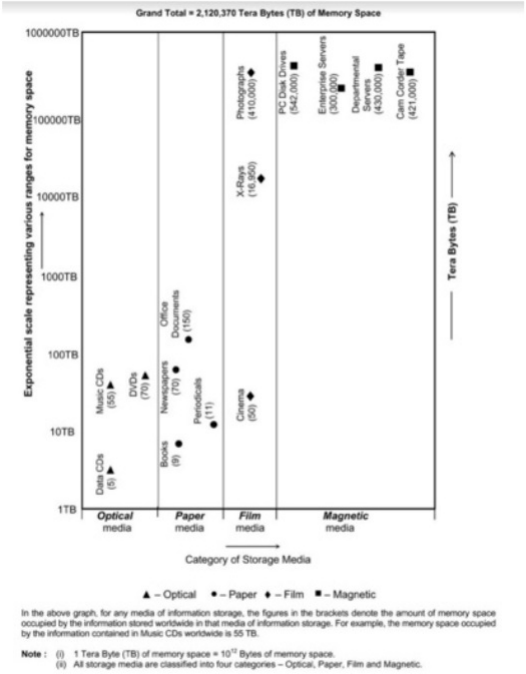
The information stored in Newspapers, Books and Periodicals forms what percentage of the total information stored on paper media? Assume that the information stored per unit memory space occupied is the same for all the media mentioned.

A. $37.5\%$ B. $45\%$ C. $57\%$ D. $54\%$

cat2013 data-interpretation line-graph

## 1.4.27 Line Graph: CAT 2013 | Question: 8 top

Summary of the estimate of memory space occupied by the information worldwide, stored in various storage media, in the year 2000



In the above graph, for any media of information storage, the figures in the brackets denote the amount of memory space occupied by the information stored worldwide in that media of information storage. For example, the memory space occupied by the information contained in Music CDs worldwide is $55$ TB.

Note:

i. $1$ Tera Byte (TB) of memory space $= 10^{12}$ Bytes of memory space.
ii. All storage media are classified into four categories – Optical, Paper, Film and Magnetic

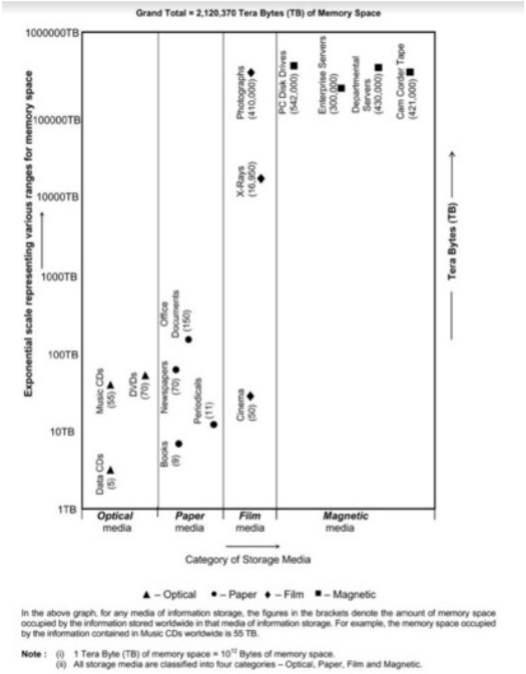
When compared to the total memory space occupied by the information stored in any single category of storage media, what is the highest percentage share of memory space occupied by the information stored in any single media within that category(approximately)?

A. $68.75\%$ B. $62.5\%$ C. $96\%$ D. $98.3\%$

cat2013 data-interpretation line-graph

## 1.4.28 Line Graph: CAT 2013 | Question: 9 top

Summary of the estimate of memory space occupied by the information worldwide, stored in various storage media, in the year 2000



In the above graph, for any media of information storage, the figures in the brackets denote the amount of memory space occupied by the information stored worldwide in that media of information storage. For example, the memory space occupied by the information contained in Music CDs worldwide is $55$ TB.

Note:

i. $1$ Tera Byte (TB) of memory space $= 10^{12}$ Bytes of memory space.
ii. All storage media are classified into four categories – Optical, Paper, Film and Magnetic

Due to advances in technology, the information stored per unit memory space occupied worldwide increases by $20\%$ every year, while the total memory space available worldwide increases at the rate of $10\%$ every year. If in the year $2000$, $80\%$ of the memory space available worldwide is occupied by the information available worldwide, and the information available worldwide were to increase by $45\%$ every year, then which of the following years is the earliest by which there will be a shortage of memory space?

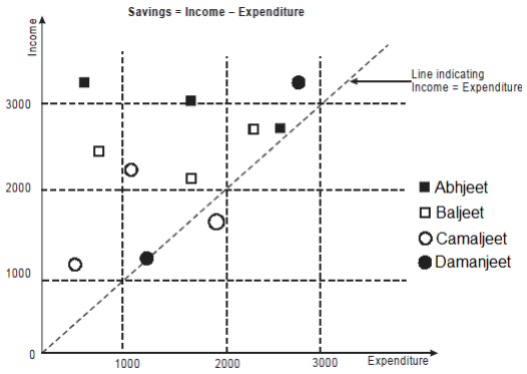
A. 2002 B. 2003 C. 2004 D. 2005

cat2013 data-interpretation line-graph

## 1.4.29 Line Graph: CAT 2014 | Question: 19 top

**Directions for questions:**

Answer the questions on the basis of the information given below. The data points in the figure below represent monthly income and expenditure data of individual members following families. For these questions, savings is defined as Savings = Income – Expenditure



Which family has the lowest average income?

A. Abhijeet B. Baljeet
C. Camaljeet D. Damanjeet

cat2014 data-interpretation line-graph

## 1.4.30 Line Graph: CAT 2014 | Question: 20 top

**Directions for questions:**

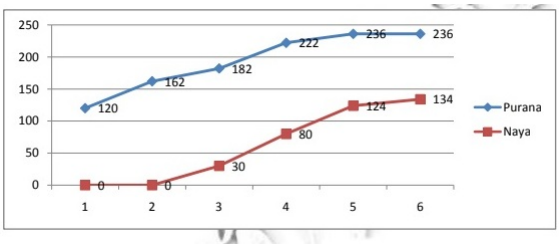
Answer key

## 1.4.33 Line Graph: CAT 2015 | Question: 35 top

Answer the questions on the basis of the information given below.

Purana and Naya are two brands of kitchen mixer-grinders available in the local market. Purana is an old brand that was introduced in 1990, while Naya was introduced in 1997. For both these brands, 20% of the mixer-grinders bought in a particular year are disposed off as junk exactly two years later. It is known that 10 Purana mixer-grinders were disposed off in 1997. The following figures show the number of Purana and Naya mixer-grinders in operation from 1995 to 2000, as at the end of the year.



How many Naya mixer-grinders were purchased in 1999?

A. 44
B. 50
C. 55
D. 64

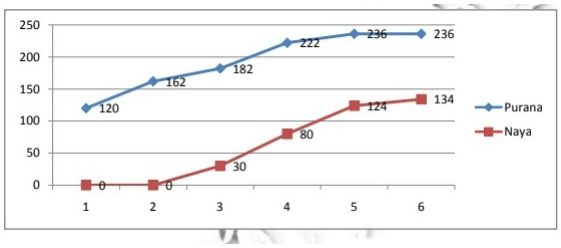
cat2015 data-interpretation line-graph

Answer key

## 1.4.34 Line Graph: CAT 2015 | Question: 36 top

Answer the questions on the basis of the information given below.

Purana and Naya are two brands of kitchen mixer-grinders available in the local market. Purana is an old brand that was introduced in 1990, while Naya was introduced in 1997. For both these brands, 20% of the mixer-grinders bought in a particular year are disposed off as junk exactly two years later. It is known that 10 Purana mixer-grinders were disposed off in 1997. The following figures show the number of Purana and Naya mixer-grinders in operation from 1995 to 2000, as at the end of the year.



How many Naya mixer-grinders were disposed off by the end of 2000?

A. 10
B. 16

C. 22
D. Cannot be determined from the data

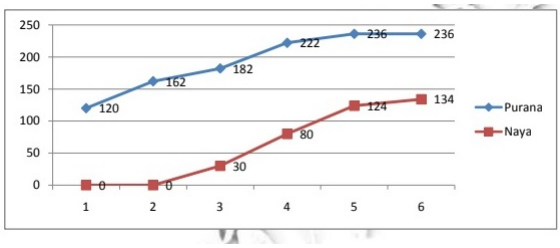
cat2015 data-interpretation line-graph

Answer key

### 1.4.35 Line Graph: CAT 2015 | Question: 37 top

Answer the questions on the basis of the information given below.

Purana and Naya are two brands of kitchen mixer-grinders available in the local market. Purana is an old brand that was introduced in 1990, while Naya was introduced in 1997. For both these brands, 20% of the mixer-grinders bought in a particular year are disposed off as junk exactly two years later. It is known that 10 Purana mixer-grinders were disposed off in 1997. The following figures show the number of Purana and Naya mixer-grinders in operation from 1995 to 2000, as at the end of the year.



How many Purana mixer-grinders were disposed off in 2000?

A. 0
B. 5
C. 6
D. Cannot be determined from the data

cat2015 data-interpretation line-graph

Answer key

### 1.4.36 Line Graph: CAT 2015 | Question: 38 top

Answer the questions on the basis of the information given below.

Purana and Naya are two brands of kitchen mixer-grinders available in the local market. Purana is an old brand that was introduced in 1990, while Naya was introduced in 1997. For both these brands, 20% of the mixer-grinders bought in a particular year are disposed off as junk exactly two years later. It is known that 10 Purana mixer-grinders were disposed off in 1997. The following figures show the number of Purana and Naya mixer-grinders in operation from 1995 to 2000, as at the end of the year.

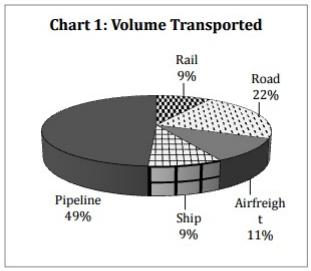
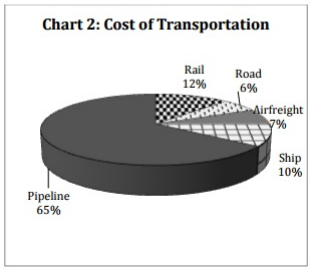
## 1.5 Pie Chart (12) top

### 1.5.1 Pie Chart: CAT 2001 | Question: 128 top

**Answer below questions based on the following information:**
The questions are based on the pie charts given below. Chart 1 shows the distribution of twelve million tons of crude oil transported through different modes over a specific period of time. Chart 2 shows the distribution of the cost of transporting this crude oil. The total cost was Rs. 30 million.





The cost in rupees per ton of oil moved by rail and road happens to be roughly

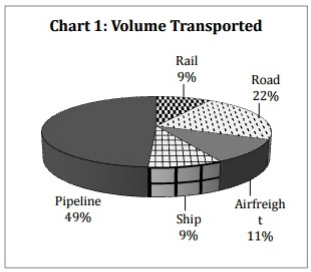
A. 3 B. 1.5 C. 4.5 D. 8

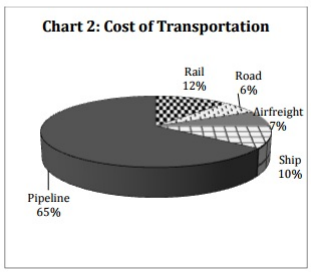
cat2001 data-interpretation pie-chart

Answer key

## 1.5.2 Pie Chart: CAT 2001 | Question: 129 top

**Answer below questions based on the following information:**
The questions are based on the pie charts given below. Chart 1 shows the distribution of twelve million tons of crude oil transported through different modes over a specific period of time. Chart 2 shows the distribution of the cost of transporting this crude oil. The total cost was Rs. 30 million.





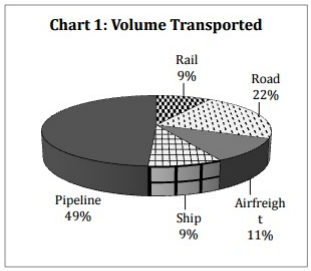
From the charts given, it appears that the cheapest mode of transport is

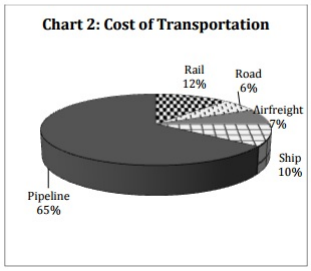
A. Road B. Rail C. Pipeline D. Ship

cat2001 data-interpretation pie-chart

## 1.5.3 Pie Chart: CAT 2001 | Question: 130 top

**Answer below questions based on the following information:**
The questions are based on the pie charts given below. Chart 1 shows the distribution of twelve million tons of crude oil transported through different modes over a specific period of time. Chart 2 shows the distribution of the cost of transporting this crude oil. The total cost was Rs. 30 million.





If the costs per ton of transport by ship, air and road are represented by $P$, $Q$ and $R$ respectively, which of the following is true?

A. $R > Q > P$
B. $P > R > Q$
C. $P > Q > R$
D. $R > P > Q$

cat2001 data-interpretation pie-chart

## 1.5.4 Pie Chart: CAT 2002 | Question: 125 top

**Study the pie charts carefully and answer the question that follow.**

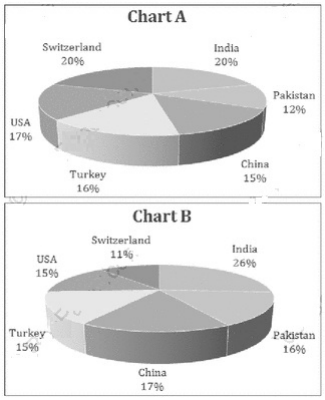


**Chart A represents the distribution by value of top 6 suppliers of MFA Textiles in 1995. The total value of Chart A is 5760 million Euro.**

**Chart B represents the distribution by quality of top 6 suppliers of MFA Textiles in 1995. The total value of Chart B is 1.05 million tons.**

The county, which has the highest average price is

A. USA
B. Switzerland
C. Turkey
D. India

cat2002 data-interpretation pie-chart

## 1.5.5 Pie Chart: CAT 2002 | Question: 126 top

**Study the pie charts carefully and answer the question that follow.**

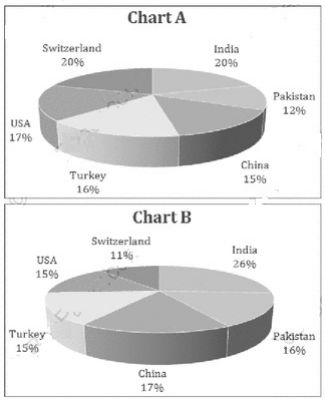

**Chart A represents the distribution by value of top 6 suppliers of MFA Textiles in 1995. The total value of Chart A is 5760 million Euro.**

**Chart B represents the distribution by quality of top 6 suppliers of MFA Textiles in 1995. The total value of Chart B is 1.05 million tons.**

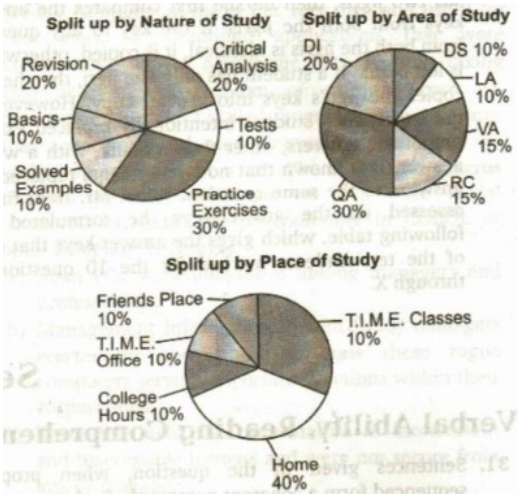
The average price (Euro per kg) in Turkey is roughly

A. 6.20 B. 5.80 C. 4.20 D. 4.80

cat2002 data-interpretation pie-chart

## 1.5.6 Pie Chart: CAT 2011 | Question: 25 top

Each of the following pie charts gives the percentage split up of the total time spent by a certain student towards preparation of CAT 2005



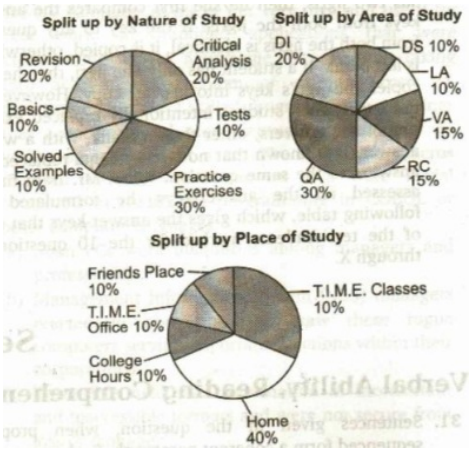
If atleast $5\%$ of the time spent on each area of study was spent on solved examples of that area, then the time spent on solved examples in any area of study, as percentage of the total time spent on that area of study, is at most.

A. $21\frac{1}{6}\%$ B. $30\%$ C. $38\frac{1}{3}\%$ D. $55\%$

cat2011 data-interpretation pie-chart

## 1.5.7 Pie Chart: CAT 2011 | Question: 26 top

Each of the following pie charts gives the percentage split up of the total time spent by a certain student towards preparation of CAT 2005



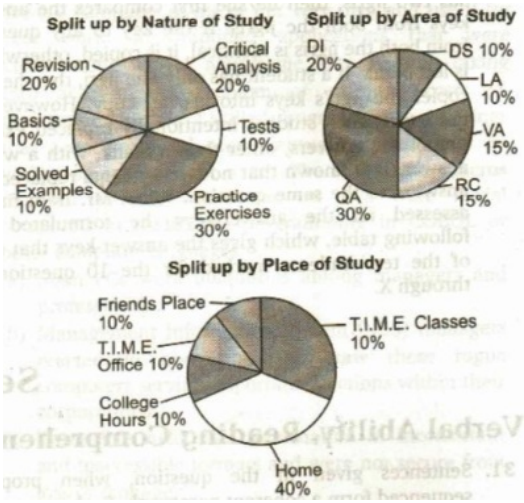
The number of areas of study for which the critical analysis was done at friends' place alone is at most

A. 2 B. 3 C. 5 D. 6

cat2011 data-interpretation pie-chart

## 1.5.8 Pie Chart: CAT 2011 | Question: 27 top

Each of the following pie charts gives the percentage split up of the total time spent by a certain student towards preparation of CAT 2005



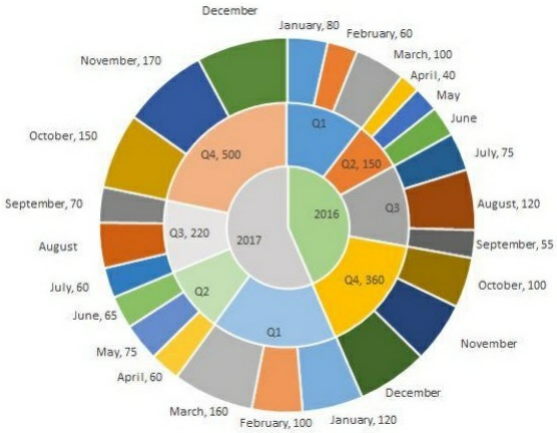
At the most what percentage of total time was spent on test taken in VA and LA?

A. $10\%$ B. $20\%$ C. $66\frac{2}{3}\%$ D. $100\%$

cat2011 data-interpretation pie-chart

## 1.5.9 Pie Chart: CAT 2018 Set-1 | Question: 39 top

The multi-layered pie-chart below shows the sales of LED television sets for a big retail electronics outlet during 2016 and 2017. The outer layer shows the monthly sales during this period, with each label showing the month followed by sales figure of that month. For some months, the sales figures are not given in the chart. The middle-layer shows quarter-wise aggregate sales figures (in some cases, aggregate quarter-wise sales numbers are not given next to the quarter). The innermost layer shows annual sales. It is known that the sales figures during the three months of the second quarter (April, May, June) of 2016 form an arithmetic progression, as do the three monthly sales figures in the fourth quarter (October, November, December) of that year.



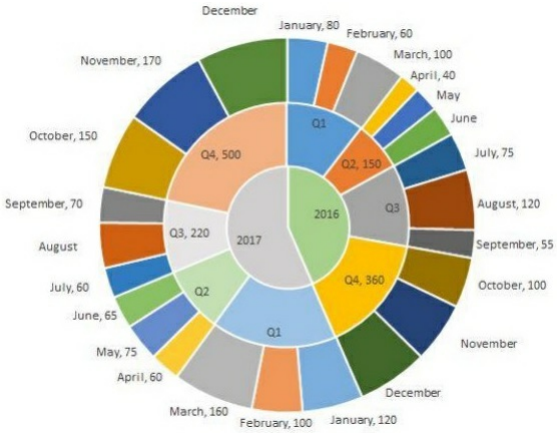
What is the percentage increase in sales in December 2017 as compared to the sales in December 2016?

A. 28.57 B. 22.22 C. 50.00 D. 38.46

cat2018-1 data-interpretation pie-chart

## 1.5.10 Pie Chart: CAT 2018 Set-1 | Question: 40 top

The multi-layered pie-chart below shows the sales of LED television sets for a big retail electronics outlet during 2016 and 2017. The outer layer shows the monthly sales during this period, with each label showing the month followed by sales figure of that month. For some months, the sales figures are not given in the chart. The middle-layer shows quarter-wise aggregate sales figures (in some cases, aggregate quarter-wise sales numbers are not given next to the quarter). The innermost layer shows annual sales. It is known that the sales figures during the three months of the second quarter (April, May, June) of 2016 form an arithmetic progression, as do the three monthly sales figures in the fourth quarter (October, November, December) of that year.



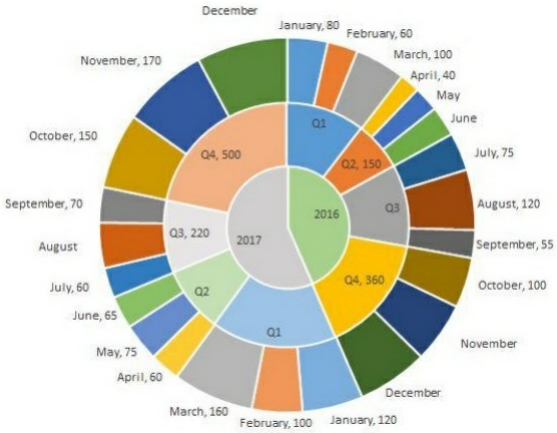
In which quarter of 2017 was the percentage increase in sales from the same quarter of 2016 the highest?

A. Q1 B. Q3 C. Q4 D. Q2

cat2018-1 data-interpretation pie-chart

## 1.5.11 Pie Chart: CAT 2018 Set-1 | Question: 41 top

The multi-layered pie-chart below shows the sales of LED television sets for a big retail electronics outlet during 2016 and 2017. The outer layer shows the monthly sales during this period, with each label showing the month followed by sales figure of that month. For some months, the sales figures are not given in the chart. The middle-layer shows quarter-wise aggregate sales figures (in some cases, aggregate quarter-wise sales numbers are not given next to the quarter). The innermost layer shows annual sales. It is known that the sales figures during the three months of the second quarter (April, May, June) of 2016 form an arithmetic progression, as do the three monthly sales figures in the fourth quarter (October, November, December) of that year.



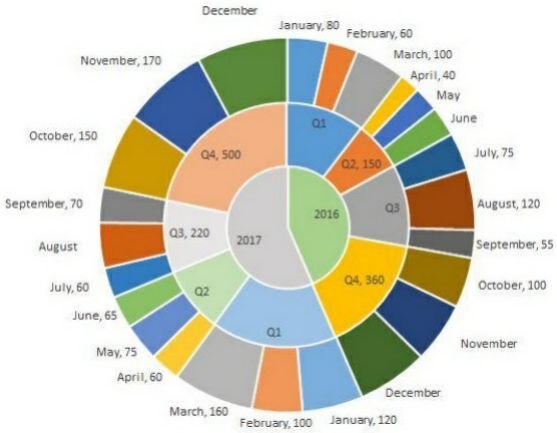
During which quarter was the percentage decrease in sales from the previous quarter's sales the highest?

A. Q2 of 2017 B. Q1 of 2017 C. Q4 of 2017 D. Q2 of 2016

cat2018-1 data-interpretation pie-chart

### 1.5.12 Pie Chart: CAT 2018 Set-1 | Question: 42 top

The multi-layered pie-chart below shows the sales of LED television sets for a big retail electronics outlet during 2016 and 2017. The outer layer shows the monthly sales during this period, with each label showing the month followed by sales figure of that month. For some months, the sales figures are not given in the chart. The middle-layer shows quarter-wise aggregate sales figures (in some cases, aggregate quarter-wise sales numbers are not given next to the quarter). The innermost layer shows annual sales. It is known that the sales figures during the three months of the second quarter (April, May, June) of 2016 form an arithmetic progression, as do the three monthly sales figures in the fourth quarter (October, November, December) of that year.



During which month was the percentage increase in sales from the previous month's sales the highest?

A. March of 2017
B. October of 2017
C. October of 2016
D. March of 2016

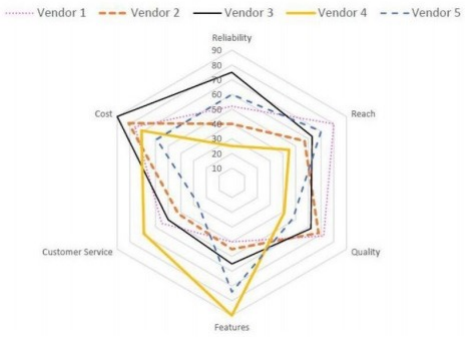
## 1.6 Radar Web Graph (7) top

### 1.6.1 Radar Web Graph: CAT 2019 Set-1 | Question: 43 top

Five vendors are being considered for a service. The evaluation committee evaluated each vendor on six aspects-Cost, Customer Service, Features, Quality, Reach, and Reliability. Each of these evaluations are on a scale of 0(worst) to 100(perfect). The evaluation scores on these aspects are shown in that radar chart. For example, Vendor 1 obtains a score of 52 on Reliability, Vendor 2 obtains a score of 45 on Features and Vendor 3 obtains a score of 90 on Cost.



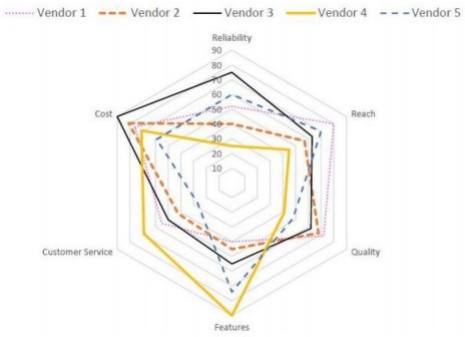
On which aspect is the median score of the five vendors the least?

A. Customer Service B. Reliability C. Cost D. Quality

cat2019-1 data-interpretation radar-web-graph

## 1.6.2 Radar Web Graph: CAT 2019 Set-1 | Question: 45 top

Five vendors are being considered for a service. The evaluation committee evaluated each vendor on six aspects-Cost, Customer Service, Features, Quality, Reach, and Reliability. Each of these evaluations are on a scale of 0(worst) to 100(perfect). The evaluation scores on these aspects are shown in that radar chart. For example, Vendor 1 obtains a score of 52 on Reliability, Vendor 2 obtains a score of 45 on Features and Vendor 3 obtains a score of 90 on Cost.



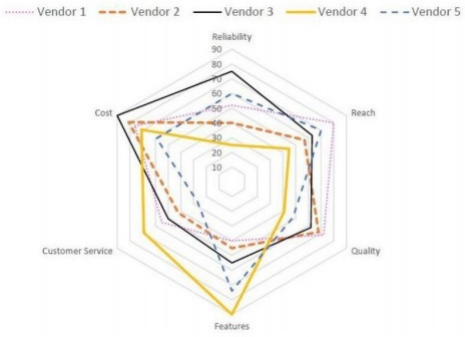
List of all the vendors who are among the top two scores on the maximum number of aspects is:

A. Vendor 1 and vendor 5
B. Vendor 2, Vendor 3 and Vendor 4
C. Vendor 2 and Vendor 5
D. Vendor 1 and Vendor 2

cat2019-1 data-interpretation radar-web-graph

## 1.6.3 Radar Web Graph: CAT 2019 Set-1 | Question: 46 top

Five vendors are being considered for a service. The evaluation committee evaluated each vendor on six aspects-Cost, Customer Service, Features, Quality, Reach, and Reliability. Each of these evaluations are on a scale of 0(worst) to 100(perfect). The evaluation scores on these aspects are shown in that radar chart. For example, Vendor 1 obtains a score of 52 on Reliability, Vendor 2 obtains a score of 45 on Features and Vendor 3 obtains a score of 90 on Cost.



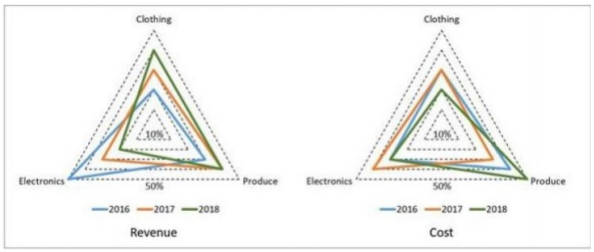
List of all the vendors who are among the top three vendors on all six aspects is:

A. Vendor 1 B. Vendor 1 and Vendor 3 C. Vendor 3 D. None of the Vendors

cat2019-1 data-interpretation radar-web-graph

### 1.6.4 Radar Web Graph: CAT 2019 Set-2 | Question: 63 top

A large store has only three departments, Clothing, Produce, and Electronics. The following figure shows the percentages of revenue and cost from the three departments for the years $2016, 2017$ and $2018$. The dotted lines depict percentage levels. So for example, in $2016$, $50\%$ of store's revenue came from its Electronics department while $40\%$ of its costs were incurred in the Produce
department.



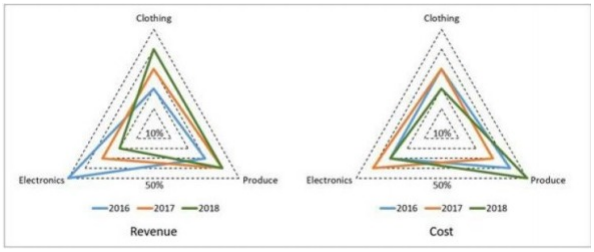
In this setup, Profit is computed as (Revenue – Cost) and Percentage Profit as Profit/Cost $\times 100\%$.
It is known that
1. The percentage profit for the store in $2016$ was $100\%$.
2. The store's revenue doubled from $2016$ to $2017$, and its cost doubled from $2016$ to $2018$.
3. There was no profit from the Electronics department in $2017$.
4. In $2018$, the revenue from the Clothing department was the same as the cost incurred in the Produce department.

What was the percentage profit of the store in $2018$ _____

cat2019-2 data-interpretation radar-web-graph numerical-answer

### 1.6.5 Radar Web Graph: CAT 2019 Set-2 | Question: 64 top

A large store has only three departments, Clothing, Produce, and Electronics. The following figure shows the percentages of revenue and cost from the three departments for the years $2016, 2017$ and $2018$. The dotted lines depict percentage levels. So for example, in $2016$, $50\%$ of store's revenue came from its Electronics department while $40\%$ of its costs were incurred in the Produce
department.



In this setup, Profit is computed as (Revenue – Cost) and Percentage Profit as Profit/Cost $\times 100\%$
It is known that
1. The percentage profit for the store in $2016$ was $100\%$.
2. The store's revenue doubled from $2016$ to $2017$, and its cost doubled from $2016$ to $2018$.
3. There was no profit from the Electronics department in $2017$.
4. In $2018$, the revenue from the Clothing department was the same as the cost incurred in the Produce department.

What was the ratio of revenue generated from the Produce department in $2017$ to that in $2018$?

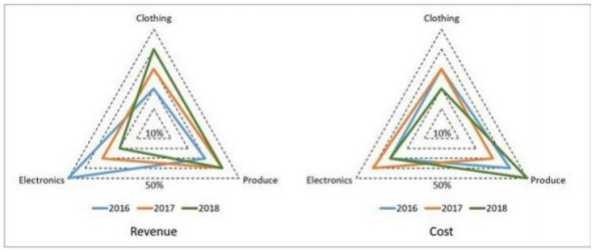
A. $16 : 9$ B. $9 : 16$ C. $8 : 5$ D. $4 : 3$

cat2019-2 data-interpretation radar-web-graph

### 1.6.6 Radar Web Graph: CAT 2019 Set-2 | Question: 65 top

A large store has only three departments, Clothing, Produce, and Electronics. The following figure shows the percentages of

revenue and cost from the three departments for the years $2016, 2017$ and $2018$. The dotted lines depict percentage levels. So for example, in $2016$, $50\%$ of store's revenue came from its Electronics department while $40\%$ of its costs were incurred in the Produce department.



In this setup, Profit is computed as (Revenue – Cost) and Percentage Profit as
Profit/Cost $\times 100\%$
It is known that

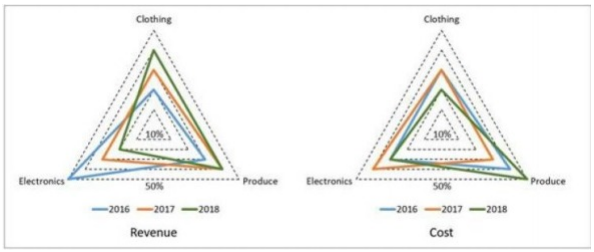
1. The percentage profit for the store in $2016$ was $100\%$.
2. The store's revenue doubled from $2016$ to $2017$, and its cost doubled from $2016$ to $2018$.
3. There was no profit from the Electronics department in $2017$.
4. In $2018$, the revenue from the Clothing department was the same as the cost incurred in the Produce department.

What percentage of the total profits for the store in $2016$ was from the Electronics department _____

cat2019-2 data-interpretation radar-web-graph numerical-answer

### 1.6.7 Radar Web Graph: CAT 2019 Set-2 | Question: 66 top

A large store has only three departments, Clothing, Produce, and Electronics. The following figure shows the percentages of revenue and cost from the three departments for the years $2016, 2017$ and $2018$. The dotted lines depict percentage levels. So for example, in $2016$, $50\%$ of store's revenue came from its Electronics department while $40\%$ of its costs were incurred in the Produce department.



In this setup, Profit is computed as (Revenue – Cost) and Percentage Profit as
Profit/Cost $\times 100\%$
It is known that

1. The percentage profit for the store in $2016$ was $100\%$.
2. The store's revenue doubled from $2016$ to $2017$, and its cost doubled from $2016$ to $2018$.
3. There was no profit from the Electronics department in $2017$.
4. In $2018$, the revenue from the Clothing department was the same as the cost incurred in the Produce department.

What was the approximate difference in profit percentages of the store in $2017$ and $2018$?

A. $33.3$ B. $15.5$ C. $8.3$ D. $25.0$

### 1.7.6 Tabular Data: CAT 2000 | Question: 141 top

**Answer the following question based on the information given below.**

Factory Sector by Type of Ownership.

All figures in the table are in percent of the total for the corresponding column.

| **Sector** | **Factories** | **Employment** | **Fixed Capital** | **Gross Output** | **Value Added** |
|---|---|---|---|---|---|
| Public | 7 | 27.7 | 43.2 | 25.8 | 30.8 |
| Central Govt. | 1 | 10.5 | 17.5 | 12.7 | 14.1 |
| State/local Govt. | 5.2 | 16.2 | 24.3 | 11.6 | 14.9 |
| Central & State/local Govt. | 0.8 | 1 | 1.4 | 1.5 | 1.8 |
| Joint | 1.8 | 5.1 | 6.8 | 8.4 | 8.1 |
| Wholly private | 90.3 | 64.6 | 46.8 | 63.8 | 58.7 |

| | | | | | |
|---|---|---|---|---|---|
| Others | 0.9 | 2.6 | 3.2 | 2 | 2.4 |
| **Total** | 100 | 100 | 100 | 100 | 100 |

Suppose the average employment level is 60 per factory. The average employment in "wholly private" factories is approximately

A. 43 B. 47 C. 50 D. 54

cat2000 data-interpretation tabular-data

### 1.7.7 Tabular Data: CAT 2000 | Question: 142 top

**Answer the following question based on the information given below.**
Factory Sector by Type of Ownership.
All figures in the table are in percent of the total for the corresponding column.

| Sector | Factories | Employment | Fixed Capital | Gross Output | Value Added |
|---|---|---|---|---|---|
| Public | 7 | 27.7 | 43.2 | 25.8 | 30.8 |
| Central Govt. | 1 | 10.5 | 17.5 | 12.7 | 14.1 |
| State/local Govt. | 5.2 | 16.2 | 24.3 | 11.6 | 14.9 |
| Central & State/local Govt. | 0.8 | 1 | 1.4 | 1.5 | 1.8 |
| Joint | 1.8 | 5.1 | 6.8 | 8.4 | 8.1 |
| Wholly private | 90.3 | 64.6 | 46.8 | 63.8 | 58.7 |
| Others | 0.9 | 2.6 | 3.2 | 2 | 2.4 |
| **Total** | 100 | 100 | 100 | 100 | 100 |

Among the firms in different sectors, value added per employee is highest in

A. Central government
B. Central and State/local governments
C. Joint sector
D. Wholly private

cat2000 data-interpretation tabular-data

### 1.7.8 Tabular Data: CAT 2000 | Question: 143 top

**Answer the following question based on the information given below.**
Factory Sector by Type of Ownership.
All figures in the table are in percent of the total for the corresponding column.

| Sector | Factories | Employment | Fixed Capital | Gross Output | Value Added |
|---|---|---|---|---|---|
| Public | 7 | 27.7 | 43.2 | 25.8 | 30.8 |
| Central Govt. | 1 | 10.5 | 17.5 | 12.7 | 14.1 |
| State/local Govt. | 5.2 | 16.2 | 24.3 | 11.6 | 14.9 |
| Central & State/local Govt. | 0.8 | 1 | 1.4 | 1.5 | 1.8 |
| Joint | 1.8 | 5.1 | 6.8 | 8.4 | 8.1 |
| Wholly private | 90.3 | 64.6 | 46.8 | 63.8 | 58.7 |
| Others | 0.9 | 2.6 | 3.2 | 2 | 2.4 |
| **Total** | 100 | 100 | 100 | 100 | 100 |

Capital productivity is defined as the gross output value per rupee of fixed capital. The three sectors with the higher capital

productivity, arranged in descending order are

A. Joint, wholly private, central and state/local
B. Wholly private, joint, central and state/local
C. Wholly private, central and state/local, joint
D. Joint, wholly private, central

## 1.7.9 Tabular Data: CAT 2000 | Question: 144 top

**Answer the following question based on the information given below.**
Factory Sector by Type of Ownership.
All figures in the table are in percent of the total for the corresponding column.

| Sector | Factories | Employment | Fixed Capital | Gross Output | Value Added |
|---|---|---|---|---|---|
| Public | 7 | 27.7 | 43.2 | 25.8 | 30.8 |
| Central Govt. | 1 | 10.5 | 17.5 | 12.7 | 14.1 |
| State/local Govt. | 5.2 | 16.2 | 24.3 | 11.6 | 14.9 |
| Central & State/local Govt. | 0.8 | 1 | 1.4 | 1.5 | 1.8 |
| Joint | 1.8 | 5.1 | 6.8 | 8.4 | 8.1 |
| Wholly private | 90.3 | 64.6 | 46.8 | 63.8 | 58.7 |
| Others | 0.9 | 2.6 | 3.2 | 2 | 2.4 |
| **Total** | 100 | 100 | 100 | 100 | 100 |

A sector is considered “pareto efficient” if its value added per employee and its value added per rupee of fixed capital is higher than those of all other sectors. Based on the table data, the pareto efficient sector is

A. Wholly private B. Joint C. Central and state/local D. Others

cat2000 data-interpretation tabular-data

## 1.7.10 Tabular Data: CAT 2000 | Question: 145 top

**Answer the following question based on the information given below.**
Factory Sector by Type of Ownership.
All figures in the table are in percent of the total for the corresponding column.

| Sector | Factories | Employment | Fixed Capital | Gross Output | Value Added |
|---|---|---|---|---|---|
| Public | 7 | 27.7 | 43.2 | 25.8 | 30.8 |
| Central Govt. | 1 | 10.5 | 17.5 | 12.7 | 14.1 |
| State/local Govt. | 5.2 | 16.2 | 24.3 | 11.6 | 14.9 |
| Central & State/local Govt. | 0.8 | 1 | 1.4 | 1.5 | 1.8 |
| Joint | 1.8 | 5.1 | 6.8 | 8.4 | 8.1 |
| Wholly private | 90.3 | 64.6 | 46.8 | 63.8 | 58.7 |
| Others | 0.9 | 2.6 | 3.2 | 2 | 2.4 |
| **Total** | 100 | 100 | 100 | 100 | 100 |

The total value added in all sectors is estimated at Rs. $140,000$ crores. Suppose that the number of firms in the joint sector is $2700$. The average value added per factory, in Rs. crores, in the central government, is

A. 141 B. 14.1 C. 131 D. 13.1

cat2000 data-interpretation tabular-data

## 1.7.11 Tabular Data: CAT 2000 | Question: 150 top

Answer the following questions based on the information given below.
The table shows trends in external transactions of Indian corporate sector during the period $1993-94$ to $1997-98$. In addition, following definitions hold good.

- Sales$_i$ , Imports$_i$, and Exports$_i$ respectively denote the sales, imports and exports in year $i$.
- Deficit in year $i$, Deficit$_i$ = Imports$_i$ – Exports$_i$.
- Deficit Intensity in year $i$, DI$_i$ = Deficit$_i$ / Sales$_i$.
- Growth rate of deficit intensity in year $i$, GDI$_i$ = (DI$_i$ – DI$_{i-1}$)/DI$_{i-1}$.

Further, note that all imports are classified as either raw material or capital goods. Trends in External Transactions of Indian Corporate Sector (All figures in %)

| Year | 1997-98 | 1996-97 | 1995-96 | 1994-95 | 1993-94 |
|---|---|---|---|---|---|
| Export Intensity* | 9.2 | 8.2 | 7.9 | 7.5 | 7.3 |
| Import Intensity* | 14.2 | 16.2 | 15.5 | 13.8 | 12.4 |
| Imported raw material / total cost of raw material | 20.2 | 19.2 | 17.6 | 16.3 | 16 |
| Imported capital goods / Gross fixed assets | 17.6 | 9.8 | 11.8 | 16.3 | 19.5 |

The highest growth rate in deficit intensity was recorded in

A. $1994-95$ B. $1995-96$ C. $1996-97$ D. $1997-98$

cat2000 data-interpretation tabular-data

## 1.7.12 Tabular Data: CAT 2000 | Question: 151 top

Answer the following questions based on the information given below.
The table shows trends in external transactions of Indian corporate sector during the period $1993-94$ to $1997-98$. In addition, following definitions hold good.

- Sales$_i$ , Imports$_i$, and Exports$_i$ respectively denote the sales, imports and exports in year $i$.
- Deficit in year $i$, Deficit$_i$ = Imports$_i$ – Exports$_i$.
- Deficit Intensity in year $i$, DI$_i$ = Deficit$_i$ / Sales$_i$.
- Growth rate of deficit intensity in year $i$, GDI$_i$ = (DI$_i$ – DI$_{i-1}$)/DI$_{i-1}$.

Further, note that all imports are classified as either raw material or capital goods. Trends in External Transactions of Indian Corporate Sector (All figures in %)

| Year | 1997-98 | 1996-97 | 1995-96 | 1994-95 | 1993-94 |
|---|---|---|---|---|---|
| Export Intensity* | 9.2 | 8.2 | 7.9 | 7.5 | 7.3 |
| Import Intensity* | 14.2 | 16.2 | 15.5 | 13.8 | 12.4 |
| Imported raw material / total cost of raw material | 20.2 | 19.2 | 17.6 | 16.3 | 16 |

| | | | | | |
|---|---|---|---|---|---|
| Imported capital goods / Gross fixed assets | 17.6 | 9.8 | 11.8 | 16.3 | 19.5 |

The value of the highest growth rate in deficit intensity is approximately

A. 8.45% B. 2.15% C. 33.3% D. 23.5%

cat2000 data-interpretation tabular-data

### 1.7.13 Tabular Data: CAT 2000 | Question: 152 top

Answer the following questions based on the information given below.
The table shows trends in external transactions of Indian corporate sector during the period $1993-94$ to $1997-98$. In addition, following definitions hold good.

- Sales$_i$ , Imports$_i$, and Exports$_i$ respectively denote the sales, imports and exports in year $i$.
- Deficit in year $i$, Deficit$_i$ = Imports$_i$ – Exports$_i$.
- Deficit Intensity in year $i$, DI$_i$ = Deficit$_i$ / Sales$_i$.
- Growth rate of deficit intensity in year $i$, GDI$_i$ = (DI$_i$ – DI$_{i-1}$)/DI$_{i-1}$.

Further, note that all imports are classified as either raw material or capital goods. Trends in External Transactions of Indian Corporate Sector (All figures in %)

| **Year** | **1997-98** | **1996-97** | **1995-96** | **1994-95** | **1993-94** |
|---|---|---|---|---|---|
| Export Intensity* | 9.2 | 8.2 | 7.9 | 7.5 | 7.3 |
| Import Intensity* | 14.2 | 16.2 | 15.5 | 13.8 | 12.4 |
| Imported raw material / total cost of raw material | 20.2 | 19.2 | 17.6 | 16.3 | 16 |
| Imported capital goods / Gross fixed assets | 17.6 | 9.8 | 11.8 | 16.3 | 19.5 |

In $1997-98$ the total cost of raw materials is estimated as $50\%$ of sales of that year. The turnover of Gross fixed assets, defined as the ratio of sales to Gross fixed assets, in $1997-98$ is, approximately

A. 3.3 B. 4.3
C. 0.33 D. not possible to determine

cat2000 data-interpretation tabular-data

### 1.7.14 Tabular Data: CAT 2000 | Question: 153 top

Answer the following questions based on the information given below.
The table shows trends in external transactions of Indian corporate sector during the period $1993-94$ to $1997-98$. In addition, following definitions hold good.

- Sales$_i$ , Imports$_i$, and Exports$_i$ respectively denote the sales, imports and exports in year $i$.
- Deficit in year $i$, Deficit$_i$ = Imports$_i$ – Exports$_i$.
- Deficit Intensity in year $i$, DI$_i$ = Deficit$_i$ / Sales$_i$.
- Growth rate of deficit intensity in year $i$, GDI$_i$ = (DI$_i$ – DI$_{i-1}$)/DI$_{i-1}$.

Further, note that all imports are classified as either raw material or capital goods. Trends in External Transactions of Indian Corporate Sector (All figures in %)

| **Year** | **1997-98** | **1996-97** | **1995-96** | **1994-95** | **1993-94** |
|---|---|---|---|---|---|
| Export Intensity* | 9.2 | 8.2 | 7.9 | 7.5 | 7.3 |
| Import Intensity* | 14.2 | 16.2 | 15.5 | 13.8 | 12.4 |

| | | | | | |
|---|---|---|---|---|---|
| Imported raw material / total cost of raw material | 20.2 | 19.2 | 17.6 | 16.3 | 16 |
| Imported capital goods / Gross fixed assets | 17.6 | 9.8 | 11.8 | 16.3 | 19.5 |

Which of the following statements can be inferred to be true from the given data?

A. During the 5 year period between $1993-94$ and $1997-98$, exports have increased every year.
B. During the 5 year period between $1993-94$ and $1997-98$, imports have decreased every year.
C. Deficit in $1997-98$ was lower than that in $1993-94$.
D. Deficit intensity has increased every year between $1993-94$ and $1996-97$.

| 18 | Kimpo | E | SEL | Seoul, Korea | 33371074 |
| 19 | George Bush | A | LAH | Houston, Texas, USA | 33089333 |
| 20 | John F. Kennedy | A | JFK | New York | 32003000 |

How many international airports not located in the USA handle more than 30 million passengers?

A. 5 B. 6 C. 10 D. 14

cat2001 data-interpretation tabular-data

## 1.7.23 Tabular Data: CAT 2002 | Question: 107 top

**Answer the question based on the table given below.**

The table below gives information about five different crops, their different quality categories and the regions where they are cultivated. Based on the information given in the table answer the questions given below.

| Type of Crops | Quality | Region |
|---|---|---|
| Crop-1 | High | R1, R2, R3, R4, R5 |
| | Medium | R6, R7, R8 |
| | Low | R9, R10, R11 |
| Crop-2 | High | R5, R8, R12 |
| | Medium | R9, R13 |
| | Low | R6 |
| Crop-3 | High | R2, R6, R7, R13 |
| | Medium | R3, R9, R11 |
| | Low | R1, R4 |
| Crop-4 | High | R3, R10, R11 |
| | Medium | R1, R2, R4 |
| | Low | R5, R9 |

How many regions produce medium qualities of Crop-1 and Crop-2 and also produce low quality of Crop-3 and Crop-4?

A. 0 B. 1 C. 2 D. 3

cat2002 data-interpretation tabular-data

## 1.7.24 Tabular Data: CAT 2002 | Question: 108 top

**Answer the question based on the table given below.**

The table below gives information about five different crops, their different quality categories and the regions where they are cultivated. Based on the information given in the table answer the questions given below.

| Type of Crops | Quality | Region |
|---|---|---|
| Crop-1 | High | R1, R2, R3, R4, R5 |
| | Medium | R6, R7, R8 |
| | Low | R9, R10, R11 |
| Crop-2 | High | R5, R8, R12 |
| | Medium | R9, R13 |
| | Low | R6 |
| | High | R2, R6, R7, R13 |

| | | |
|---|---|---|
| Crop-3 | Medium | R3, R9, R11 |
| | Low | R1, R4 |
| Crop-4 | High | R3, R10, R11 |
| | Medium | R1, R2, R4 |
| | Low | R5, R9 |

Which of the following statements is true?

A. All medium quality Crop-2 producing regions are also high quality Crop-3 producing regions.
B. The high quality Crop-1 producing regions are also medium and low crop-4 producing regions.
C. There are exactly five Crop-3 producing regions, which also produce Crop-4 but not Crop-2.
D. Some Crop-3, producing regions produce Crop-1, and high quality Crop-2

cat2002 data-interpretation tabular-data

## 1.7.25 Tabular Data: CAT 2002 | Question: 109 top

**Answer the question based on the table given below.**

The table below gives information about five different crops, their different quality categories and the regions where they are cultivated. Based on the information given in the table answer the questions given below.

| Type of Crops | Quality | Region |
|---|---|---|
| Crop-1 | High | R1, R2, R3, R4, R5 |
| | Medium | R6, R7, R8 |
| | Low | R9, R10, R11 |
| Crop-2 | High | R5, R8, R12 |
| | Medium | R9, R13 |
| | Low | R6 |
| Crop-3 | High | R2, R6, R7, R13 |
| | Medium | R3, R9, R11 |
| | Low | R1, R4 |
| Crop-4 | High | R3, R10, R11 |
| | Medium | R1, R2, R4 |
| | Low | R5, R9 |

How many low quality Crop-1 producing regions are either high quality Crop-4 producing regions or medium quality Crop-3 producing regions?

A. 1 B. 2 C. 3 D. 0

Answer key

## 1.7.47 Tabular Data: CAT 2002 | Question: 141 top

**Read the data given below and answer the question that follow.**

In a country, the following signals are applicable

| | |
|---|---|
| 3 Red Lights | Stop |
| 2 Red Lights | Turn Left |
| 1 Red Light | Turn Right |
| 3 Green Lights | Go @ 100 kmph |
| 2 Green Lights | Go @ 40 kmph |
| 1 Green Light | Go @ 20 kmph |

A man headed towards north and follows the given signals as

| | |
|---|---|
| Starting point | 1 Green Light |
| After half-an-hour, 1st Signal | 2 Red and 2 Green Lights |
| After 15 minutes, 2nd Signal | 1 Red Light |
| After half-an-hour, 3rd Signal | 1 Red and 3 Green Lights |
| After 24 minutes, 4th Signal | 2 Red and 2 Green Lights |
| After 15 minutes, 5th and Last Signal | 3 Red Lights |

What is the total distance covered by the man till the last signal?

A. 90 km B. 120 km C. 110 km D. 84 km

cat2002 data-interpretation tabular-data

## 1.7.48 Tabular Data: CAT 2002 | Question: 142 top

**Read the data given below and answer the question that follow.**

In a country, the following signals are applicable

| | |
|---|---|
| 3 Red Lights | Stop |
| 2 Red Lights | Turn Left |
| 1 Red Light | Turn Right |
| 3 Green Lights | Go @ 100 kmph |
| 2 Green Lights | Go @ 40 kmph |

| | |
|---|---|
| 1 Green Light | Go @ 20 kmph |

A man headed towards north and follows the given signals as

| | |
|---|---|
| Starting point | 1 Green Light |
| After half-an-hour, 1st Signal | 2 Red and 2 Green Lights |
| After 15 minutes, 2nd Signal | 1 Red Light |
| After half-an-hour, 3rd Signal | 1 Red and 3 Green Lights |
| After 24 minutes, 4th Signal | 2 Red and 2 Green Lights |
| After 15 minutes, 5th and Last Signal | 3 Red Lights |

What is his net displacement with respect to the starting point?

A. 40 km towards South West
B. 50 km towards North East
C. 40 km towards North East
D. 60 km towards South West

cat2002 data-interpretation tabular-data

## 1.7.49 Tabular Data: CAT 2002 | Question: 143 top

**Read the data given below and answer the question that follow.**

In a country, the following signals are applicable

| | |
|---|---|
| 3 Red Lights | Stop |
| 2 Red Lights | Turn Left |
| 1 Red Light | Turn Right |
| 3 Green Lights | Go @ 100 kmph |
| 2 Green Lights | Go @ 40 kmph |
| 1 Green Light | Go @ 20 kmph |

A man headed towards north and follows the given signals as

| | |
|---|---|
| Starting point | 1 Green Light |
| After half-an-hour, 1st Signal | 2 Red and 2 Green Lights |
| After 15 minutes, 2nd Signal | 1 Red Light |
| After half-an-hour, 3rd Signal | 1 Red and 3 Green Lights |
| After 24 minutes, 4th Signal | 2 Red and 2 Green Lights |
| After 15 minutes, 5th and Last Signal | 3 Red Lights |

If the first signal after the starting point, is 1 Red and 2 Green Lights, then what is the total distance covered by the man till the last signal?

A. 90 km
B. 50 km
C. 40 km
D. 80 km

cat2002 data-interpretation tabular-data

## 1.7.50 Tabular Data: CAT 2002 | Question: 144 top

**Read the data given below and answer the question that follow.**

In a country, the following signals are applicable

| | |
|---|---|
| 3 Red Lights | Stop |
| 2 Red Lights | Turn Left |
| 1 Red Light | Turn Right |

| | |
|---|---|
| 3 Green Lights | Go @ 100 kmph |
| 2 Green Lights | Go @ 40 kmph |
| 1 Green Light | Go @ 20 kmph |

A man headed towards north and follows the given signals as

| | |
|---|---|
| Starting point | 1 Green Light |
| After half-an-hour, 1st Signal | 2 Red and 2 Green Lights |
| After 15 minutes, 2nd Signal | 1 Red Light |
| After half-an-hour, 3rd Signal | 1 Red and 3 Green Lights |
| After 24 minutes, 4th Signal | 2 Red and 2 Green Lights |
| After 15 minutes, 5th and Last Signal | 3 Red Lights |

Instead of heading North, if the man was heading South, then by the end of the journey, he was

A. 50 km towards South, 50 km towards West from his starting point.
B. 50 km towards North, 50 km towards West from his starting point.
C. 60 km towards North, 40 km towards West from his starting point.
D. 40 km towards South, 30 km towards West from his starting point.

cat2002 data-interpretation tabular-data

## 1.7.51 Tabular Data: CAT 2003 | Question: 1-51 top

In each question, there are two statements: A and B, either of which can be true or false on the basis of the information given below:

**A research agency collected the following data regarding the admission process of a reputed management school in India.**

| Year | Gender | Number that bought application forms | Number that appeared for the written test | Number that were called for the interview | Number that was selected for the course |
|---|---|---|---|---|---|
| 2002 | Male | 61205 | 59981 | 684 | 171 |
| | Female | 19236 | 15389 | 138 | 48 |
| 2003 | Male | 63298 | 60133 | 115 | 115 |
| | Female | 45292 | 40763 | 399 | 84 |

**Choose 1 if only A is true**

**Choose 2 if only B is true**

**Choose 3 if both A and B are true**

**Choose 4 if neither A nor B is true**

A. The success rate of moving from written test to interview stage for males was worse than for females in 2003.
B. The success rate of moving from written test to interview stage for females was better in 2002 than in 2003.

cat2003-1 data-interpretation tabular-data

## 1.7.52 Tabular Data: CAT 2003 | Question: 1-52 top

In the question, there are two statements: A and B, either of which can be true or false on the basis of the information given below:

**A research agency collected the following data regarding the admission process of a reputed management school in India.**

| Year | Gender | Number that bought application forms | Number that appeared for the written test | Number that were called for the interview | Number that was selected for the course |
|---|---|---|---|---|---|
| 2002 | Male | 61205 | 59981 | 684 | 171 |
| | Female | 19236 | 15389 | 138 | 48 |
| 2003 | Male | 63298 | 60133 | 115 | 115 |
| | Female | 45292 | 40763 | 399 | 84 |

**Choose 1 if only A is true**

**Choose 2 if only B is true**

**Choose 3 if both A and B are true**

**Choose 4 if neither A nor B is true**

A. In 2002, the number of females selected for the course as the proportion of the number of females who bought application forms, was higher than the corresponding proportion for females.
B. In 2002, among those called for interview, males had a greater success rate than females.

cat2003-1 data-interpretation tabular-data

## 1.7.53 Tabular Data: CAT 2003 | Question: 1-53 top

In the question, there are two statements: A and B, either of which can be true or false on the basis of the information given below:

**A research agency collected the following data regarding the admission process of a reputed management school in India.**

| Year | Gender | Number that bought application forms | Number that appeared for the written test | Number that were called for the interview | Number that was selected for the course |
|---|---|---|---|---|---|
| 2002 | Male | 61205 | 59981 | 684 | 171 |
| | Female | 19236 | 15389 | 138 | 48 |
| 2003 | Male | 63298 | 60133 | 115 | 115 |
| | Female | 45292 | 40763 | 399 | 84 |

**Choose 1 if only A is true**

**Choose 2 if only B is true**

**Choose 3 if both A and B are true**

**Choose 4 if neither A nor B is true**

A. The percentage of absentees in written test among females decreased from 2002 to 2003.
B. The percentage of absentees in written test among males was larger than among females in 2003.

cat2003-1 data-interpretation tabular-data

## 1.7.54 Tabular Data: CAT 2003 | Question: 1-58 top

**Answer the questions on the basis of the information given below:**

The table below provides certain demographic details of 30 respondents who were part of a survey. The demographic characteristics are: gender, number of children, and age of respondents. The first number in each cell is the number of respondents in that group. The minimum and maximum age of respondents in each group is given in brackets. For example, there are five female respondents with no children among these five; the youngest is 34 years old, while the oldest is 49.

| No. of children | Male | Female | Total |
|---|---|---|---|

| | | | |
|---|---|---|---|
| 0 | 1 (38, 38) | 5 (34, 49) | 6 |
| 1 | 1 (32, 32) | 8 (35, 57) | 9 |
| 2 | 8 (21, 65) | 3 (37, 63) | 11 |
| 3 | 2 (32, 33) | 2 (27, 40) | 4 |
| Total | 12 | 18 | 30 |

The percentage of respondents aged less than 40 years is at least _____

A. 10% B. 16.67% C. 20.0% D. 30%

cat2003-1 data-interpretation tabular-data

### 1.7.55 Tabular Data: CAT 2003 | Question: 1-59 top

**Answer the question on the basis of the information given below:**

The table below provides certain demographic details of 30 respondents who were part of a survey. The demographic characteristics are: gender, number of children, and age of respondents. The first number in each cell is the number of respondents in that group. The minimum and maximum age of respondents in each group is given in brackets. For example, there are five female respondents with no children among these five; the youngest is 34 years old, while the oldest is 49.

| No. of children | Male | Female | Total |
|---|---|---|---|
| 0 | 1 (38, 38) | 5 (34, 49) | 6 |
| 1 | 1 (32, 32) | 8 (35, 57) | 9 |
| 2 | 8 (21, 65) | 3 (37, 63) | 11 |
| 3 | 2 (32, 33) | 2 (27, 40) | 4 |
| Total | 12 | 18 | 30 |

Given the information above, the percentage of respondents older than 35 can be at most _____

A. 30% B. 73.33% C. 76.67% D. 90%

cat2003-1 data-interpretation tabular-data

### 1.7.56 Tabular Data: CAT 2003 | Question: 1-60 top

**Answer the question on the basis of the information given below:**

The table below provides certain demographic details of 30 respondents who were part of a survey. The demographic characteristics are: gender, number of children, and age of respondents. The first number in each cell is the number of respondents in that group. The minimum and maximum age of respondents in each group is given in brackets. For example, there are five female respondents with no children among these five; the youngest is 34 years old, while the oldest is 49.

| No. of children | Male | Female | Total |
|---|---|---|---|
| 0 | 1 (38, 38) | 5 (34, 49) | 6 |
| 1 | 1 (32, 32) | 8 (35, 57) | 9 |
| 2 | 8 (21, 65) | 3 (37, 63) | 11 |
| 3 | 2 (32, 33) | 2 (27, 40) | 4 |
| Total | 12 | 18 | 30 |

The percentage of respondents that fall into the 35 to 40 years age group (both inclusive) is at least _____

A. 6.67% B. 10% C. 13.33% D. 26.67%

cat2003-1 data-interpretation tabular-data

### 1.7.57 Tabular Data: CAT 2003 | Question: 1-61 top

**Answer the question on the basis of the information given below:**

Spam that enters our electronic mailboxes can be classified under several spam heads. The following table shows the distribution of such spam worldwide over time. The total number of spam emails received during December 2002 was larger than the number received in June 2003. The total number of spam emails received during September 2002 was larger than the number received in March 2003. The figures in the table represent the percentage of all spam emails received during that period, falling into those respective categories.

| Category | Sept 2002 | Dec 2002 | March 2003 | June 2003 |
|---|---|---|---|---|
| Adult | 38 | 33 | 19 | 17 |
| Financial | 25 | 30 | 37 | 45 |
| Health | 11 | 19 | 5 | 18 |
| Internet | 5 | 3 | 10 | 6 |
| Products | 3 | 7 | 10 | 11 |
| Scams | 5 | 6 | 11 | 2 |
| Others | 13 | 2 | 8 | 1 |

In which category was the percentage of spam emails increasing but at a decreasing rate?

A. Financial B. Scams C. Products D. None of these

cat2003-1 data-interpretation tabular-data

## 1.7.58 Tabular Data: CAT 2003 | Question: 1-62 top

**Answer the question on the basis of the information given below:**

Spam that enters our electronic mailboxes can be classified under several spam heads. The following table shows the distribution of such spam worldwide over time. The total number of spam emails received during December 2002 was larger than the number received in June 2003. The total number of spam emails received during September 2002 was larger than the number received in March 2003. The figures in the table represent the percentage of all spam emails received during that period, falling into those respective categories.

| Category | Sept 2002 | Dec 2002 | March 2003 | June 2003 |
|---|---|---|---|---|
| Adult | 38 | 33 | 19 | 17 |
| Financial | 25 | 30 | 37 | 45 |
| Health | 11 | 19 | 5 | 18 |
| Internet | 5 | 3 | 10 | 6 |
| Products | 3 | 7 | 10 | 11 |
| Scams | 5 | 6 | 11 | 2 |
| Others | 13 | 2 | 8 | 1 |

In Health category, the number of spam emails received in December 2002 as compared to June 2003.

A. Was larger
B. was smaller
C. was equal
D. cannot be determined

cat2003-1 data-interpretation tabular-data

## 1.7.59 Tabular Data: CAT 2003 | Question: 1-63 top

**Answer the question on the basis of the information given below:**

Spam that enters our electronic mailboxes can be classified under several spam heads. The following table shows the distribution of such spam worldwide over time. The total number of spam emails received during December 2002 was larger than the number received in June 2003. The total number of spam emails received during September 2002 was larger than the number received in March 2003. The figures in the table represent the percentage of all spam emails received during that period, falling into those respective categories.

| Category | Sept 2002 | Dec 2002 | March 2003 | June 2003 |
|---|---|---|---|---|
| Adult | 38 | 33 | 19 | 17 |
| Financial | 25 | 30 | 37 | 45 |
| Health | 11 | 19 | 5 | 18 |
| Internet | 5 | 3 | 10 | 6 |
| Products | 3 | 7 | 10 | 11 |
| Scams | 5 | 6 | 11 | 2 |
| Others | 13 | 2 | 8 | 1 |

In finance category, the number of spam emails received in September 2002 as compared to March 2003.

A. Was larger
B. was smaller
C. was equal
D. cannot be determined

cat2003-1 data-interpretation tabular-data

## 1.7.60 Tabular Data: CAT 2003 | Question: 1-64 top

**Answer the question on the basis of the information given below:**

One of the functions of the RBI is to mobilize funds for the Govt of India by issuing securities. The following table shows details of funds mobilized during the period July2002-July2003. Notice that on each date there were two rounds of issues, each with a different maturity.

| Date of issue | Notified amount | Maturity | Competitive bids received | Non-competitive bids received | Competitive bids accepted | | Non-competitive bids accepted | | Total amount mobilized | Coupon rate% | Implicit yield % |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | Rs. Crore | Years | No. | No. | No. | Value | No. | Value | Rs. Crore | | |
| 17Jul-02 | 40 | 15 | 239 | 23 | 66 | 15.21 | 23 | 0.37 | 16 | 8.07 | 7.8 |
| 17Jul-02 | 30 | 10 | 145 | 12 | 90 | 29.88 | 12 | 0.12 | 30 | 6.72 | 6.72 |
| 5-Aug-02 | 50 | 9 | 324 | 13 | 105 | 49.68 | 13 | 0.33 | 50 | 9.39 | 7.24 |

Which of the following is NOT true?

A. Competitive bids received always exceed non-competitive bids received
B. The number of competitive bids accepted does not always exceed the number of non-competitive bids accepted.
C. The value of competitive bids accepted on any particular date is never higher for higher maturity.
D. The value of the competitive bids accepted in the first round is always greater than that in the second round.

| **Total** | **930** | | | | | | | | **906** | | |

Which of the following is true?

A. The second round issues have the higher maturity than the first round for all dates.
B. The second round issues of any dates has a lower maturity only when the first round notified amount exceeds that of the first round.
C. On at least one occasion, the second round issue having lower maturity received a higher number of competitive bids.
D. None of the above three is true.

## 1.7.63 Tabular Data: CAT 2003 | Question: 1-70 top

**Answer the below questions based on the information given in the below table:**

| School | Overall ranking | Ranking by academics | Ranking by recruiters | Ranking by placement | Median starting salary | % employed | Annual tuition fee. |
|---|---|---|---|---|---|---|---|
| Stanford University | 1 | 1 | 3 | 1 | $82,000 | 98.9 | $23,100 |
| Harvard University | 2 | 1 | 2 | 4 | $80,000 | 96.4 | $23,840 |
| University of Pennsylvania | 3 | 1 | 4 | 2 | $79.000 | 100.0 | $24,956 |
| Massachusetts Institute of Technology | 4 | 1 | 4 | 3 | $78,000 | 98.8 | $23,900 |
| University of Chicago | 5 | 1 | 8 | 10 | $65,000 | 98.4 | $23,930 |
| Northwestern University | 6 | 1 | 1 | 11 | $70,000 | 93.6 | $23,025 |
| Columbia University | 7 | 9 | 10 | 5 | $83,000 | 96.2 | $23,830 |
| Dartmouth College | 8 | 12 | 11 | 6 | $70,000 | 98.3 | $23,700 |
| Duke University | 9 | 9 | 7 | 8 | $67,500 | 98.5 | $24,380 |
| University of California - Berkley | 10 | 7 | 12 | 12 | $70,000 | 93.7 | $18,788 |
| University of Virginia | 11 | 12 | 9 | 9 | $66,000 | 98.1 | $19,627 |
| University of Michigan – Ann Arbor | 12 | 7 | 6 | 14 | $65,000 | 99.1 | $23,178 |
| New York University | 13 | 16 | 19 | 7 | $70,583 | 97.0 | $23,554 |
| Carnegie Mellon University | 14 | 12 | 18 | 13 | $67,200 | 96.6 | $22,200 |
| Yale University | 15 | 18 | 17 | 22 | $65,000 | 91.5 | $23,220 |
| Univ. Of North Carolina – Chapel Hill | 16 | 16 | 16 | 16 | $60,000 | 96.8 | $14,333 |
| University of California – Los Angeles | 17 | 9 | 13 | 38 | $65,000 | 82.2 | $19,431 |
| University of Texas - Austin | 18 | 18 | 13 | 24 | $60,000 | 97.3 | $11,614 |
| Indiana University - Bloomington | 19 | 18 | 20 | 17 | $61,500 | 95.2 | $15,613 |
| Cornell University | 20 | 12 | 15 | 36 | $64,000 | 85.1 | $23,151 |

Madhu has received admission in all schools listed above. She wishes the highest overall ranked school whose

a. Annual tuition fee does not exceed

b. Median starting salary is at least $\$70,000$. Which school will she

$23,000 and

select?

A. University of Virginia
B. University of Pennsylvania
C. Northern University
D. University of California-Berkeley

Answer key

## 1.7.64 Tabular Data: CAT 2003 | Question: 1-71 top

**Answer the below questions based on the information given in the below table:**

| School | Overall ranking | Ranking by academics | Ranking by recruiters | Ranking by placement | Median starting salary | % employed | Annual tuition fee. |
|---|---|---|---|---|---|---|---|
| Stanford University | 1 | 1 | 3 | 1 | $82,000 | 98.9 | $23,100 |
| Harvard University | 2 | 1 | 2 | 4 | $80,000 | 96.4 | $23,840 |
| University of Pennsylvania | 3 | 1 | 4 | 2 | $79.000 | 100.0 | $24,956 |
| Massachusetts Institute of Technology | 4 | 1 | 4 | 3 | $78,000 | 98.8 | $23,900 |
| University of Chicago | 5 | 1 | 8 | 10 | $65,000 | 98.4 | $23,930 |
| Northwestern University | 6 | 1 | 1 | 11 | $70,000 | 93.6 | $23,025 |
| Columbia University | 7 | 9 | 10 | 5 | $83,000 | 96.2 | $23,830 |
| Dartmouth College | 8 | 12 | 11 | 6 | $70,000 | 98.3 | $23,700 |
| Duke University | 9 | 9 | 7 | 8 | $67,500 | 98.5 | $24,380 |
| University of California - Berkley | 10 | 7 | 12 | 12 | $70,000 | 93.7 | $18,788 |
| University of Virginia | 11 | 12 | 9 | 9 | $66,000 | 98.1 | $19,627 |
| University of Michigan – Ann Arbor | 12 | 7 | 6 | 14 | $65,000 | 99.1 | $23,178 |
| New York University | 13 | 16 | 19 | 7 | $70,583 | 97.0 | $23,554 |
| Carnegie Mellon University | 14 | 12 | 18 | 13 | $67,200 | 96.6 | $22,200 |
| Yale University | 15 | 18 | 17 | 22 | $65,000 | 91.5 | $23,220 |
| Univ. Of North Carolina – Chapel Hill | 16 | 16 | 16 | 16 | $60,000 | 96.8 | $14,333 |
| University of California – Los Angeles | 17 | 9 | 13 | 38 | $65,000 | 82.2 | $19,431 |
| University of Texas - Austin | 18 | 18 | 13 | 24 | $60,000 | 97.3 | $11,614 |
| Indiana University - Bloomington | 19 | 18 | 20 | 17 | $61,500 | 95.2 | $15,613 |
| Cornell University | 20 | 12 | 15 | 36 | $64,000 | 85.1 | $23,151 |

In terms of starting salary and tuition fee, how many schools are uniformly better (higher median starting salary and lower tuition fee) than Darmouth College?

A. 1 B. 2 C. 3 D. 4

cat2003-1 data-interpretation tabular-data

## 1.7.65 Tabular Data: CAT 2003 | Question: 1-72 top

**Answer the below questions based on the information given in the below table:**

| School | Overall ranking | Ranking by academics | Ranking by recruiters | Ranking by placement | Median starting salary | % employed | Annual tuition fee. |
|---|---|---|---|---|---|---|---|
| Stanford University | 1 | 1 | 3 | 1 | $82,000 | 98.9 | $23,100 |
| Harvard University | 2 | 1 | 2 | 4 | $80,000 | 96.4 | $23,840 |
| University of Pennsylvania | 3 | 1 | 4 | 2 | $79.000 | 100.0 | $24,956 |
| Massachusetts Institute of Technology | 4 | 1 | 4 | 3 | $78,000 | 98.8 | $23,900 |
| University of Chicago | 5 | 1 | 8 | 10 | $65,000 | 98.4 | $23,930 |
| Northwestern University | 6 | 1 | 1 | 11 | $70,000 | 93.6 | $23,025 |
| Columbia University | 7 | 9 | 10 | 5 | $83,000 | 96.2 | $23,830 |
| Dartmouth College | 8 | 12 | 11 | 6 | $70,000 | 98.3 | $23,700 |
| Duke University | 9 | 9 | 7 | 8 | $67,500 | 98.5 | $24,380 |
| University of California - Berkley | 10 | 7 | 12 | 12 | $70,000 | 93.7 | $18,788 |
| University of Virginia | 11 | 12 | 9 | 9 | $66,000 | 98.1 | $19,627 |
| University of Michigan – Ann Arbor | 12 | 7 | 6 | 14 | $65,000 | 99.1 | $23,178 |
| New York University | 13 | 16 | 19 | 7 | $70,583 | 97.0 | $23,554 |
| Carnegie Mellon University | 14 | 12 | 18 | 13 | $67,200 | 96.6 | $22,200 |
| Yale University | 15 | 18 | 17 | 22 | $65,000 | 91.5 | $23,220 |
| Univ. Of North Carolina – Chapel Hill | 16 | 16 | 16 | 16 | $60,000 | 96.8 | $14,333 |
| University of California – Los Angeles | 17 | 9 | 13 | 38 | $65,000 | 82.2 | $19,431 |
| University of Texas - Austin | 18 | 18 | 13 | 24 | $60,000 | 97.3 | $11,614 |
| Indiana University - Bloomington | 19 | 18 | 20 | 17 | $61,500 | 95.2 | $15,613 |
| Cornell University | 20 | 12 | 15 | 36 | $64,000 | 85.1 | $23,151 |

How many schools in the list above have single digit ranking on at least 3 of the 4 parameters (overall ranking, ranking by academics, ranking by recruiters and ranking by placement)?

A. 10 B. 5 C. 7 D. 8

cat2003-1 data-interpretation tabular-data

## 1.7.66 Tabular Data: CAT 2003 | Question: 1-73 top

**Answer the question on the basis of the information given below:**

Table A provides data about ages of children in a school. For the age given in the first column, the second column gives the number of children not exceeding that age. For example, first entry indicates that there are 9 children aged 4 years or less. Table B and C provide data on the heights and weights respectively for the same group of children in a similar format. Assuming that an older child is always taller and weighs more than a younger child, answer the following questions.

| **Table A** | |
|---|---|
| **Age (years)** | **Number** |
| 4 | 9 |
| 5 | 12 |
| 6 | 22 |
| 7 | 35 |
| 8 | 42 |
| 9 | 48 |
| 11 | 69 |
| 12 | 77 |
| 13 | 86 |
| 14 | 100 |

| **Table B** |
|---|

| Height (cm) | Number |
|---|---|
| 115 | 6 |
| 120 | 11 |
| 125 | 24 |
| 130 | 36 |
| 135 | 45 |
| 140 | 53 |
| 145 | 62 |
| 150 | 75 |
| 155 | 81 |
| 160 | 93 |
| 165 | 100 |

| Table C | |
|---|---|
| Weight (kg) | Number |
| 30 | 8 |
| 32 | 13 |
| 34 | 17 |
| 36 | 28 |
| 38 | 33 |
| 40 | 46 |
| 42 | 54 |
| 44 | 67 |
| 46 | 79 |
| 48 | 91 |
| 50 | 100 |

What is the number of children of age $9$ years or less whose height does not exceed $135$ cm?

A. $48$
B. $45$
C. $3$
D. cannot be determined

cat2003-1 data-interpretation tabular-data

## 1.7.67 Tabular Data: CAT 2003 | Question: 1-74 top

**Answer the question on the basis of the information given below:**

Table A provides data about ages of children in a school. For the age given in the first column, the second column gives the number of children not exceeding that age. For example, first entry indicates that there are $9$ children aged $4$ years or less. Table B and C provide data on the heights and weights respectively for the same group of children in a similar format. Assuming that an older child is always taller and weighs more than a younger child, answer the following questions.

| Table A | |
|---|---|
| Age (years) | Number |
| 4 | 9 |
| 5 | 12 |
| 6 | 22 |
| 7 | 35 |
| 8 | 42 |

| | |
|---|---|
| 9 | 48 |
| 11 | 69 |
| 12 | 77 |
| 13 | 86 |
| 14 | 100 |

| Table B | |
|---|---|
| **Height (cm)** | **Number** |
| 115 | 6 |
| 120 | 11 |
| 125 | 24 |
| 130 | 36 |
| 135 | 45 |
| 140 | 53 |
| 145 | 62 |
| 150 | 75 |
| 155 | 81 |
| 160 | 93 |
| 165 | 100 |

| Table C | |
|---|---|
| **Weight (kg)** | **Number** |
| 30 | 8 |
| 32 | 13 |
| 34 | 17 |
| 36 | 28 |
| 38 | 33 |
| 40 | 46 |
| 42 | 54 |
| 44 | 67 |
| 46 | 79 |
| 48 | 91 |
| 50 | 100 |

How many children of age more than $10$ years are taller than $150$ cm and do not weigh more than $48$ kg?

A. 16
B. 40
C. 9
D. Cannot be determined

cat2003-1 data-interpretation tabular-data

## 1.7.68 Tabular Data: CAT 2003 | Question: 1-75 top

**Answer the question on the basis of the information given below:**

Table A provides data about ages of children in a school. For the age given in the first column, the second column gives the number of children not exceeding that age. For example, first entry indicates that there are $9$ children aged $4$ years or less. Table B and C provide data on the heights and weights respectively for the same group of children in a similar format. Assuming that an older child is always taller and weighs more than a younger child, answer the following questions.

| Table A | |
|---|---|
| **Age (years)** | **Number** |
| 4 | 9 |
| 5 | 12 |
| 6 | 22 |

| | |
|---|---|
| 7 | 35 |
| 8 | 42 |
| 9 | 48 |
| 11 | 69 |
| 12 | 77 |
| 13 | 86 |
| 14 | 100 |

| **Table B** | |
|---|---|
| **Height (cm)** | **Number** |
| 115 | 6 |
| 120 | 11 |
| 125 | 24 |

## 1.7.69 Tabular Data: CAT 2003 | Question: 1-76 top

**Answer the questions on the basis of the information below:**

An industry comprises four firms (A, B, C and D). Financial details of these firms and of the industry as a whole for a particular year are given below. Profitability of a firm is defined as profit as a percentage of sales.

| Figures are in Rs. | A | B | C | D | Total |
|---|---|---|---|---|---|
| Sales | 24,568 | 24,468 | 23,752 | 15,782 | 89,570 |
| Operating costs | 17,198 | 19,101 | 16,151 | 10,258 | 62,708 |
| Interest costs | 2457 | 2292 | 2850 | 1578 | 9177 |
| Profit | 4914 | 4075 | 4750 | 3946 | 17,684 |

Which firm has the highest profitability?

A. A B. B C. C D. D

## 1.7.71 Tabular Data: CAT 2003 | Question: 2-110 top

**Answer the questions on the basis of the following information.**

Recently, the answers of a test held nationwide were leaked to a group of unscrupulous people. The investigative agency has arrested the mastermind and nine other people A, B, C, D, E, F, G, H and I in this matter. Interrogating them, the following facts have been obtained regarding their operation. Initially the mastermind obtains the correct answer-key. All the others create their answer-key from one or two people who already possess the same. These people are called his/her "sources". If the person has two sources, then he/she compares the answer-keys obtained from both sources. If the key to a question from both sources is identical, it is copied, otherwise it is left blank. If the person has only one source, he/she copies the source's answers into his/her copy. Finally, each person compulsorily replaces one of the answers (not a blank one) with a wrong answer in his/her answer key.

The paper contained 200 questions; so the investigative agency has ruled out the possibility of two or more of them introducing wrong answers to the same question. The investigative agency has a copy of the correct answer key and has tabulated the following data. These data represent question numbers.

| Name | Wrong Answer(s) | Blank answer(s) |
|---|---|---|
| A | 46 | -- |
| B | 96 | 46, 90, 25 |
| C | 27, 56 | 17, 46, 90 |
| D | 17 | -- |
| E | 46, 90 | -- |

| | | |
|---|---|---|
| F | 14, 46 | 92, 90 |
| G | 25 | -- |
| H | 46, 92 | -- |
| I | 27 | 17, 26, 90 |

Which among the following must have two sources?

A. A B. B C. C D. D

cat2003-2 data-interpretation tabular-data

## 1.7.72 Tabular Data: CAT 2003 | Question: 2-111 top

**Answer the questions on the basis of the following information.**

Recently, the answers of a test held nationwide were leaked to a group of unscrupulous people. The investigative agency has arrested the mastermind and nine other people A, B, C, D, E, F, G, H and I in this matter. Interrogating them, the following facts have been obtained regarding their operation. Initially the mastermind obtains the correct answer-key. All the others create their answer-key from one or two people who already possess the same. These people are called his/her "sources". If the person has two sources, then he/she compares the answer-keys obtained from both sources. If the key to a question from both sources is identical, it is copied, otherwise it is left blank. If the person has only one source, he/she copies the source's answers into his/her copy. Finally, each person compulsorily replaces one of the answers (not a blank one) with a wrong answer in his/her answer key.

The paper contained 200 questions; so the investigative agency has ruled out the possibility of two or more of them introducing wrong answers to the same question. The investigative agency has a copy of the correct answer key and has tabulated the following data. These data represent question numbers.

| Name | Wrong Answer(s) | Blank answer(s) |
|---|---|---|
| A | 46 | -- |
| B | 96 | 46, 90, 25 |
| C | 27, 56 | 17, 46, 90 |
| D | 17 | -- |
| E | 46, 90 | -- |
| F | 14, 46 | 92, 90 |
| G | 25 | -- |
| H | 46, 92 | -- |
| I | 27 | 17, 26, 90 |

How many people (excluding the mastermind) needed to make answer before C could make his answer key?

A. 2 B. 3 C. 4 D. 5

cat2003-2 data-interpretation tabular-data

## 1.7.73 Tabular Data: CAT 2003 | Question: 2-112 top

**Answer the questions on the basis of the following information.**

Recently, the answers of a test held nationwide were leaked to a group of unscrupulous people. The investigative agency has arrested the mastermind and nine other people A, B, C, D, E, F, G, H and I in this matter. Interrogating them, the following facts have been obtained regarding their operation. Initially the mastermind obtains the correct answer-key. All the others create their answer-key from one or two people who already possess the same. These people are called his/her "sources". If the person has two sources, then he/she compares the answer-keys obtained from both sources. If the key to a question from both sources is identical, it is copied, otherwise it is left blank. If the person has only one source, he/she copies the source's answers into his/her copy. ## 1.7.76 Tabular Data: CAT 2003 | Question: 2-125 top

**Answer the question on the basis of the following table.**

Below is a table that lists countries region-wise. Each region-wise list is sorted, first by birth rate and then alphabetically by the name of the country. We now wish to merge the region-wise list into one consolidated list and provide overall rankings to each country based first on birth rate and then on death rate. Thus, if some countries have the same birth rate, then the country with a lower death rate will be ranked higher. Further, countries having identical birth and death rates will get the same rank. For example, if two countries are tied for the third position, then both will be given rank 3, while the next country (in the ordered list) will be ranked 5.

| Rank | Country | Birth Rate | Death Rate | Region |
|---|---|---|---|---|
| 1 | South Africa | 36 | 12 | Africa |
| 2 | Egypt | 39 | 13 | Africa |
| 3 | Cameroon | 42 | 22 | Africa |
| 4 | Mozambique | 45 | 18 | Africa |
| 5 | Zaire | 45 | 18 | Africa |
| 6 | Ghana | 46 | 14 | Africa |
| 7 | Angola | 47 | 23 | Africa |
| 8 | Madagascar | 47 | 22 | Africa |
| 9 | Morocco | 47 | 16 | Africa |
| 10 | Tanzania | 47 | 17 | Africa |
| 11 | Ethiopia | 45 | 23 | Africa |

## 1.7.79 Tabular Data: CAT 2003 | Question: 2-128 top

**Answer the question on the basis of the following table.**

Below is a table that lists countries region-wise. Each region-wise list is sorted, first by birth rate and then alphabetically by the name of the country. We now wish to merge the region-wise list into one consolidated list and provide overall rankings to each country based first on birth rate and then on death rate. Thus, if some countries have the same birth rate, then the country with a lower death rate will be ranked higher. Further, countries having identical birth and death rates will get the same rank. For example, if two countries are tied for the third position, then both will be given rank 3, while the next country (in the ordered list) will be ranked 5.

| Rank | Country | Birth Rate | Death Rate | Region |
|---|---|---|---|---|
| 1 | South Africa | 36 | 12 | Africa |
| 2 | Egypt | 39 | 13 | Africa |
| 3 | Cameroon | 42 | 22 | Africa |
| 4 | Mozambique | 45 | 18 | Africa |
| 5 | Zaire | 45 | 18 | Africa |
| 6 | Ghana | 46 | 14 | Africa |
| 7 | Angola | 47 | 23 | Africa |
| 8 | Madagascar | 47 | 22 | Africa |
| 9 | Morocco | 47 | 16 | Africa |

## 1.7.80 Tabular Data: CAT 2003 | Question: 2-139 top

Answer the question on the basis of following information.
In a Decathlon, the events are 100 m, 400 m, 100 m hurdles, 1500 m, High jump, Pole vault, Long jump, Discus, Shot put and Javelin. The performance in the first four of these events is consolidated into Score 1, the next three into Score 2, and the last three into Score 3. Each such consolidation is obtained by giving appropriate positive weights to individual events. The final score is simply the total of these three scores. The athletes with the highest, second highest and the third highest final scores receive the gold, silver and bronze medals, respectively. The table given below gives the scores and performance of nineteen top athletes in this event.

| Name | Country | Final Score | Score-1 | Score-2 | Score-3 | 100m | High jump | Pole-vault |
|---|---|---|---|---|---|---|---|---|
| Eduard Hamalainen | BLS | 8802 | 491 | 5322 | 2989 | 10.74 | 2.1 | 4.8 |
| Michael Smith | CAN | 8855 | 174 | 5274 | 3407 | 11.23 | 2.0 | 4.9 |
| Tomas Dvorak | CZE | 8796 | 499 | 5169 | 3128 | 10.63 | 1.9 | 4.7 |
| Uwe Frrimuth | DDR | 8799 | 441 | 5491 | 3124 | 11.06 | 2.0 | 4.8 |
| Torsten Voss | DHK | 8880 | 521 | 5234 | 5868 | 10.69 | 2.1 | 5.1 |
| Erki Nool | EST | 8768 | 408 | 5553 | 2808 | 10.71 | 2.0 | 5.4 |
| Christian Plaziat | FRA | 8775 | 563 | 5430 | 2781 | 10.72 | 2.1 | 5.0 |
| Jurgen Hingsen | FRG | 8792 | 451 | 5223 | 3033 | 10.95 | 2.0 | 4.9 |
| Siegfried Wentz | FRG | 8856 | 470 | 5250 | 3137 | 10.85 | 2.1 | 4.8 |
| Guido Kratschmer | FRG | 8861 | 575 | 5308 | 3064 | 10.58 | 2.0 | 4.6 |

| Dan O'Brien | USA | 8897 | 408 | 5331 | 3120 | 10.36 | 2.1 | 4.8 |

At least how many competitors (excluding Daley Thompson) must Michael Smith have out-jumped in the long jump event?

A. 1 B. 2 C. 3 D. 4

cat2003-2 data-interpretation tabular-data

## 1.7.82 Tabular Data: CAT 2003 | Question: 2-141 top

**Answer the question on the basis of the following information.**

**The following is the Wholesale Price Index (WPI) of a select list of items with the base year of 1993-94. In other words, all the item prices are made 100 in that year (1993-94). Price in all other years for an item are measured with respect to its price in the base year. For instance, the price of cement went up by 1% in 1994-95 as compared to 1993-94. Similarly, the price of power went up by 3% in 1996–97 as compared to 1993-94.**

| | 1993-94 | 1994-95 | 1995-96 | 1996-97 | 1997-98 | 1998-99 | 1999-2000 | 2000-01 | 2001-02 | 2002-03 |
|---|---|---|---|---|---|---|---|---|---|---|
| **All Items** | 100 | 102.0 | 102.5 | 104.00 | 103.00 | 105.00 | 106.00 | 108.00 | 107.00 | 106.00 |
| **Cement** | 100 | 101.0 | 100.5 | 103.00 | 102.50 | 103.50 | 103.10 | 103.80 | 103.70 | 104.00 |

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| **Limestone** | 100 | 102.0 | 102.5 | 102.75 | 102.25 | 103.00 | 104.00 | 105.00 | 104.50 | 105.00 |
| **Power** | 100 | 101.5 | 102.5 | 103.00 | 103.50 | 104.00 | 106.00 | 107.00 | 107.50 | 108.00 |
| **Steel** | 100 | 101.5 | 101.0 | 103.50 | 104.00 | 104.25 | 105.00 | 105.50 | 106.00 | 105.50 |
| **Timber** | 100 | 100.5 | 101.5 | 102.00 | 102.50 | 102.00 | 103.00 | 103.50 | 104.00 | 104.50 |
| **Wages** | 100 | 101.5 | 103.0 | 103.50 | 104.00 | 104.25 | 104.00 | 104.75 | 104.90 | 105.30 |

Let us suppose that one bag of cement $(50$ kgs) consumes $100$ kgs of limestones and $10$ units of power. The only other cost item in producing cement is in the form of wages. During $1993-94$, limestone, power and wages contribute, respectively, $20\%, 25\%$, and $15\%$ to the cement price per bag. The average operating profit ($\%$ of price per cement bag) earned by a cement manufacturer during $2002-03$ is closest to

A. $40\%$ B. $39.5\%$ C. $38.5\%$ D. $37.5\%$

|---|---|---|---|---|---|---|---|---|---|---|
| **All Items** | 100 | 102.0 | 102.5 | 104.00 | 103.00 | 105.00 | 106.00 | 108.00 | 107.00 | 106.00 |
| **Cement** | 100 | 101.0 | 100.5 | 103.00 | 102.50 | 103.50 | 103.10 | 103.80 | 103.70 | 104.00 |
| **Limestone** | 100 | 102.0 | 102.5 | 102.75 | 102.25 | 103.00 | 104.00 | 105.00 | 104.50 | 105.00 |
| **Power** | 100 | 101.5 | 102.5 | 103.00 | 103.50 | 104.00 | 106.00 | 107.00 | 107.50 | 108.00 |
| **Steel** | 100 | 101.5 | 101.0 | 103.50 | 104.00 | 104.25 | 105.00 | 105.50 | 106.00 | 105.50 |
| **Timber** | 100 | 100.5 | 101.5 | 102.00 | 102.50 | 102.00 | 103.00 | 103.50 | 104.00 | 104.50 |
| **Wages** | 100 | 101.5 | 103.0 | 103.50 | 104.00 | 104.25 | 104.00 | 104.75 | 104.90 | 105.30 |

Steel manufacturing requires the use of iron ore, power and manpower. The cost of iron ore has followed the All Item index. During $1993-94$ power accounted for $30\%$ of the selling price of steel, iron ore for $25\%$, and wages for $10\%$ of the selling price of steel. Assuming the cost and price data for cement as given in the previous question, the operating profit ($\%$ of selling price) of an average steel manufacture in $2002-03$

A. is more than that of a cement manufacturer
B. is less than that of a cement manufacturer
C. is the same as that of a cement manufacturer
D. cannot be determined

Answer key

## 1.7.85 Tabular Data: CAT 2003 | Question: 2-144 top

**Answer the question on the basis of the following information.**

**The following is the Wholesale Price Index (WPI) of a select list of items with the base year of 1993-94. In other words, all the item prices are made 100 in that year (1993-94). Price in all other years for an item are measured with respect to its price in the base year. For instance, the price of cement went up by 1% in 1994-95 as compared to 1993-94. Similarly, the price of power went up by 3% in 1996–97 as compared to 1993-94.**

| | **1993-94** | **1994-95** | **1995-96** | **1996-97** | **1997-98** | **1998-99** | **1999-2000** | **2000-01** | **2001-02** | **2002-03** |
|---|---|---|---|---|---|---|---|---|---|---|
| **All Items** | 100 | 102.0 | 102.5 | 104.00 | 103.00 | 105.00 | 106.00 | 108.00 | 107.00 | 106.00 |
| **Cement** | 100 | 101.0 | 100.5 | 103.00 | 102.50 | 103.50 | 103.10 | 103.80 | 103.70 | 104.00 |
| **Limestone** | 100 | 102.0 | 102.5 | 102.75 | 102.25 | 103.00 | 104.00 | 105.00 | 104.50 | 105.00 |
| **Power** | 100 | 101.5 | 102.5 | 103.00 | 103.50 | 104.00 | 106.00 | 107.00 | 107.50 | 108.00 |
| **Steel** | 100 | 101.5 | 101.0 | 103.50 | 104.00 | 104.25 | 105.00 | 105.50 | 106.00 | 105.50 |
| **Timber** | 100 | 100.5 | 101.5 | 102.00 | 102.50 | 102.00 | 103.00 | 103.50 | 104.00 | 104.50 |
| **Wages** | 100 | 101.5 | 103.0 | 103.50 | 104.00 | 104.25 | 104.00 | 104.75 | 104.90 | 105.30 |

Which item(s) experienced only one decline in price during the ten-year period?

A. Steel and Limestone B. Steel and Timber C. Timber D. Timber and Wages

## 1.7.89 Tabular Data: CAT 2004 | Question: 01 top

**Answer the questions based on the information given below:**

Prof. Singh has been tracking the number of visitors to his homepage. his service provider has provided him with the following data on the country of origin of the visitors and the university they belong to:

| **Number of Visitors** | | | |
|---|---|---|---|
| **Countries** | **Day** | | |
| | **1** | **2** | **3** |
| Canada | 2 | 0 | 0 |
| Netherlands | 1 | 1 | 0 |
| India | 1 | 2 | 0 |
| UK | 2 | 0 | 2 |
| USA | 1 | 0 | 1 |

| **Number of Visitors** | | | |
|---|---|---|---|
| **UNIVERSITY** | **Day** | | |
| | **1** | **2** | **3** |
| University 1 | 1 | 0 | 0 |
| University 2 | 2 | 0 | 0 |

| | | | |
|---|---|---|---|
| University 3 | 0 | 1 | 0 |
| University 4 | 0 | 0 | 2 |
| University 5 | 1 | 0 | 0 |
| University 6 | 1 | 0 | 1 |
| University 7 | 2 | 0 | 0 |
| University 8 | 0 | 2 | 0 |

University 1 can belong to _____

A. UK B. Canada C. Netherlands D. USA

cat2004 data-interpretation tabular-data

## 1.7.90 Tabular Data: CAT 2004 | Question: 02 top

**Answer the questions based on the information given below:**

Prof. Singh has been tracking the number of visitors to his homepage. his service provider has provided him with the following data on the country of origin of the visitors and the university they belong to:

| **Number of Visitors** | | | |
|---|---|---|---|
| **Countries** | **Day** | | |
| | **1** | **2** | **3** |
| Canada | 2 | 0 | 0 |
| Netherlands | 1 | 1 | 0 |
| India | 1 | 2 | 0 |
| UK | 2 | 0 | 2 |
| USA | 1 | 0 | 1 |

| **Number of Visitors** | | | |
|---|---|---|---|
| **UNIVERSITY** | **Day** | | |
| | **1** | **2** | **3** |
| University 1 | 1 | 0 | 0 |
| University 2 | 2 | 0 | 0 |

Which among the listed countries can possibly host three of the eight listed universities?

A. None B. Only UK C. Only India D. Both India and UK

cat2004 data-interpretation tabular-data

Answer key

## 1.7.93 Tabular Data: CAT 2004 | Question: 13 top

**Answer the questions based on the information given below:**

The Dean's office recently scanned student results into the central computer system. When their character reading software cannot read something it leaves that space blank. The scanner output reads as follows:

| Name | Finance | Marketing | Statistics | Strategy | Operations | GPA |
|---|---|---|---|---|---|---|
| **Aparna** | | B | F | | | 1.4 |
| **Bikas** | D | D | F | F | | |
| **Chandra** | | D | A | F | F | 2.4 |
| **Deepak** | A | B | 2 | D | D | 3.2 |
| **Fazal** | D | F | B | | D | 2.4 |
| **Gowri** | C | C | A | | B | 3.8 |
| **Hari** | | B | A | | D | 2.8 |
| **Ismet** | | | B | | A | |
| **Jagdeep** | A | A | B | | C | 3.8 |
| **Kunal** | F | | A | F | F | 1.8 |
| **Leena** | B | A | | B | F | 3.2 |
| **Manab** | | | A | B | B | |
| **Nisha** | A | D | B | A | F | 3.6 |
| **Osman** | C | | B | B | A | 4.6 |
| **Preeti** | F | D | | D | | 3.2 |
| **Rahul** | A | C | A | | F | 4.2 |
| **Sameer** | | C | F | B | | |
| **Tara** | B | | | | | 2.4 |
| **Utkarsh** | | | F | C | A | 3.0 |
| **Vipul** | A | | C | C | F | 2.4 |

In the grading system, A, B, C, D and F grades fetch $6, 4, 3, 2,$ and $0$ respectively. The Grade Point Average (GPA) is the arithmetic mean of the grade point obtained in five subjects. For example, Nisha's GPA is $(6 + 2 + 4 + 6 + 0)/5 = 3.6$

Some additional facts are also known about the students' grades. These are:

- Vipul obtained the same grade in Marketing as Aparna obtained in Finance and Strategy.
- Fazal obtained the same grade in Strategy as Utkarsh did in Marketing.
- Tara received the same grade in exactly three courses.

In Operations, Tara could have received the same grade as _____

A. Ismet B. Hari C. Jagdeep D. Manab

cat2004 data-interpretation tabular-data

## 1.7.94 Tabular Data: CAT 2004 | Question: 14 top

**Answer the questions based on the information given below:**

The Dean's office recently scanned student results into the central computer system. When their character reading software cannot read something it leaves that space blank. The scanner output reads as follows:

| Name | Finance | Marketing | Statistics | Strategy | Operations | GPA |
|---|---|---|---|---|---|---|
| **Aparna** | | B | F | | | 1.4 |
| **Bikas** | D | D | F | F | | |
| **Chandra** | | D | A | F | F | 2.4 |
| **Deepak** | A | B | 2 | D | D | 3.2 |

| | | | | | | |
|---|---|---|---|---|---|---|
| **Fazal** | D | F | B | | D | 2.4 |
| **Gowri** | C | C | A | | B | 3.8 |
| **Hari** | | B | A | | D | 2.8 |
| **Ismet** | | | B | | A | |
| **Jagdeep** | A | A | B | | C | 3.8 |
| **Kunal** | F | | A | F | F | 1.8 |
| **Leena** | B | A | | B | F | 3.2 |
| **Manab** | | | A | B | B | |
| **Nisha** | A | D | B | A | F | 3.6 |
| **Osman** | C | | B | B | A | 4.6 |
| **Preeti** | F | D | | D | | 3.2 |
| **Rahul** | A | C | A | | F | 4.2 |
| **Sameer** | | C | F | B | | |
| **Tara** | B | | | | | 2.4 |
| **Utkarsh** | | | F | C | A | 3.0 |
| **Vipul** | A | | C | C | F | 2.4 |

In the grading system, A, B, C, D and F grades fetch $6, 4, 3, 2,$ and $0$ respectively. The Grade Point Average (GPA) is the arithmetic mean of the grade point obtained in five subjects. For example, Nisha's GPA is $(6 + 2 + 4 + 6 + 0)/5 = 3.6$

Some additional facts are also known about the students' grades. These are:

- Vipul obtained the same grade in Marketing as Aparna obtained in Finance and Strategy.
- Fazal obtained the same grade in Strategy as Utkarsh did in Marketing.
- Tara received the same grade in exactly three courses.

What grade did Preeti obtain in Statistics?

A. A B. B C. C D. D

cat2004 data-interpretation tabular-data

## 1.7.95 Tabular Data: CAT 2004 | Question: 15 top

**Answer the questions based on the information given below:**

The Dean's office recently scanned student results into the central computer system. When their character reading software cannot read something it leaves that space blank. The scanner output reads as follows:

| Name | Finance | Marketing | Statistics | Strategy | Operations | GPA |
|---|---|---|---|---|---|---|
| **Aparna** | | B | F | | | 1.4 |
| **Bikas** | D | D | F | F | | |
| **Chandra** | | D | A | F | F | 2.4 |
| **Deepak** | A | B | 2 | D | D | 3.2 |
| **Fazal** | D | F | B | | D | 2.4 |
| **Gowri** | C | C | A | | B | 3.8 |
| **Hari** | | B | A | | D | 2.8 |
| **Ismet** | | | B | | A | |
| **Jagdeep** | A | A | B | | C | 3.8 |
| **Kunal** | F | | A | F | F | 1.8 |
| **Leena** | B | A | | B | F | 3.2 |
| **Manab** | | | A | B | B | |
| **Nisha** | A | D | B | A | F | 3.6 |
| **Osman** | C | | B | B | A | 4.6 |
| **Preeti** | F | D | | D | | 3.2 |
| **Rahul** | A | C | A | | F | 4.2 |
| **Sameer** | | C | F | B | | |
| **Tara** | B | | | | | 2.4 |
| **Utkarsh** | | | F | C | A | 3.0 |
| **Vipul** | A | | C | C | F | 2.4 |

In the grading system, A, B, C, D and F grades fetch $6, 4, 3, 2,$ and $0$ respectively. The Grade Point Average (GPA) is the arithmetic mean of the grade point obtained in five subjects. For example, Nisha's GPA is $(6 + 2 + 4 + 6 + 0)/5 = 3.6$

Some additional facts are also known about the students' grades. These are:

- Vipul obtained the same grade in Marketing as Aparna obtained in Finance and Strategy.
- Fazal obtained the same grade in Strategy as Utkarsh did in Marketing.
- Tara received the same grade in exactly three courses.

What grade did Utkarsh obtain in Finance?

A. B B. C C. D D. F

## 1.7.96 Tabular Data: CAT 2004 | Question: 16 top

**Answer the questions based on the information given below:**

The Dean's office recently scanned student results into the central computer system. When their character reading software cannot read something it leaves that space blank. The scanner output reads as follows:

| Name | Finance | Marketing | Statistics | Strategy | Operations | GPA |
|---|---|---|---|---|---|---|
| **Aparna** | | B | F | | | 1.4 |
| **Bikas** | D | D | F | F | | |
| **Chandra** | | D | A | F | F | 2.4 |
| **Deepak** | A | B | 2 | D | D | 3.2 |
| **Fazal** | D | F | B | | D | 2.4 |
| **Gowri** | C | C | A | | B | 3.8 |
| **Hari** | | B | A | | D | 2.8 |
| **Ismet** | | | B | | A | |
| **Jagdeep** | A | A | B | | C | 3.8 |
| **Kunal** | F | | A | F | F | 1.8 |
| **Leena** | B | A | | B | F | 3.2 |
| **Manab** | | | A | B | B | |
| **Nisha** | A | D | B | A | F | 3.6 |
| **Osman** | C | | B | B | A | 4.6 |
| **Preeti** | F | D | | D | | 3.2 |
| **Rahul** | A | C | A | | F | 4.2 |
| **Sameer** | | C | F | B | | |
| **Tara** | B | | | | | 2.4 |
| **Utkarsh** | | | F | C | A | 3.0 |
| **Vipul** | A | | C | C | F | 2.4 |

In the grading system, A, B, C, D and F grades fetch $6, 4, 3, 2,$ and $0$ respectively. The Grade Point Average (GPA) is the arithmetic mean of the grade point obtained in five subjects. For example, Nisha's GPA is $(6 + 2 + 4 + 6 + 0)/5 = 3.6$

Some additional facts are also known about the students' grades. These are:

- Vipul obtained the same grade in Marketing as Aparna obtained in Finance and Strategy.
- Fazal obtained the same grade in Strategy as Utkarsh did in Marketing.
- Tara received the same grade in exactly three courses.

In Strategy, Gowri's grade point was higher than that obtained by _____

A. Fazal B. Hari C. Nisha D. Rahul

## 1.7.97 Tabular Data: CAT 2005 | Question: 65 top

**Answer the following question based on the information given below:**

The table below reports annual statistics related to rice production in select states in India for a particular year.

| State | Total Area | % of Area Under | Production | Population |
|---|---|---|---|---|
| Himachal Pradesh | 6 | 20 | 1.2 | 6 |
| Kerala | 4 | 60 | 4.8 | 32 |
| Rajasthan | 34 | 20 | 6.8 | 56 |
| Bihar | 10 | 60 | 12 | 83 |
| Karnataka | 19 | 50 | 19 | 53 |
| Haryana | 4 | 80 | 19.2 | 21 |
| West Bengal | 9 | 80 | 21.6 | 80 |
| Gujarat | 20 | 60 | 24 | 51 |
| Punjab | 5 | 80 | 24 | 24 |
| Madhya Pradesh | 31 | 40 | 24.8 | 60 |
| Tamilnadu | 13 | 70 | 27.3 | 62 |
| Maharastra | 31 | 50 | 48 | 97 |
| Uttar Pradesh | 24 | 70 | 67.2 | 166 |
| Andhra Pradesh | 28 | 80 | 112 | 76 |

Which two states account for the highest productivity of rice (tons produced by hectare of rice cultivation)?

A. Haryana and Punjab
B. Punjab and Andhra Pradesh
C. Andhra Pradesh and Haryana
D. Uttar Pradesh and Haryana

## 1.7.100 Tabular Data: CAT 2005 | Question: 68 top

**Answer the following question based on the information given below:**

The table below reports the gender, designation and age-group of the employees in an organization. It also provides information on their commitment to projects coming up in the months of January (Jan), February (Feb), March (Mar) and April (Apr), as well as their interest in attending workshops on: Business Opportunities (BO), Communication Skills (CS), and E-Governance (EG).

| Sl No | Name | Gender | Designation | Age Group | Committed to problems during | Interested in workshop on |
|---|---|---|---|---|---|---|

| | | | | | | |
|---|---|---|---|---|---|---|
| 1 | Anshul | M | Mgr | Y | Jan, Mar | CS, EG |
| 2 | Bushkant | M | Dir | I | Feb, Mar | BO, EG |
| 3 | Charu | F | Mgr | I | Jan, Feb | BO, CS |
| 4 | Dinesh | M | Exe | O | Jan, Apr | BO, CS, EG |
| 5 | Eashwaran | M | Dir | O | Feb, Apr | BO |
| 6 | Fatima | F | Mgr | Y | Jan, Mar | BO, CS |
| 7 | Gayatri | F | Exe | Y | Feb, Mar | EG |
| 8 | Hari | M | Mgr | I | Feb, Mar | BO, CS, EG |
| 9 | Indira | F | Dir | O | Feb, Apr | BO, EG |
| 10 | John | M | Dir | Y | Jan, Mar | BO |
| 11 | Kalindi | F | Exe | I | Jan, Apr | BO, CS, EG |
| 12 | Lavanya | F | Mgr | O | Feb, Apr | CS, EG |
| 13 | Mandeep | M | Mgr | O | Mar, Apr | BO, EG |
| 14 | Nandlal | M | Dir | O | Jan, Feb | BO, EG |
| 15 | Parul | F | Exe | Y | Feb, Apr | CS, EG |
| 16 | Rahul | M | Mgr | Y | Mar, Apr | CS, EG |
| 17 | Sunita | F | Dir | Y | Jan, Feb | BO, EG |
| 18 | Urvashi | F | Exe | I | Feb, Mar | EG |
| 19 | Yamini | F | Mgr | O | Mar, Apr | CS, EG |
| 20 | Zeena | F | Exe | Y | Jan, Mar | BO, CS, EG |

For each workshop, exactly four employees to be sent, of which at least two should be Females and at least one should be Young. No employee can be sent to the workshop in which he/she is not interested in. An employee cannot attend the workshop on

- Communication Skills, if she or he is committed to internal projects in the month of January.
- Business Opportunities, if she or he is committed to internal projects in the month of February.
- E-Governance, if she or he is committed to internal projects in the month of March.

Assuming that Parul and Hari are attending the workshop on Communication Skills (CS), then which of the following employees can possibly attend the CS workshop?

A. Rahul and Yamini B. Dinesh and Lavanya C. Anshul and Yamini D. Fatima and Zeena

Answer key

## 1.7.103 Tabular Data: CAT 2005 | Question: 71 top

**Answer the following question based on the information given below:**

In the table below is the listing of players, seeded from highest $(\#1)$ to the lowest $(\#32)$, who are due to play in an Association of Tennis Players (ATP) tournament for women. This tournament has four knockout rounds before the final, i.e., first round, second round, quarter finals and semi-finals. In the first round, the highest seeded player plays the lowest seeded player (seed $\#32$) which is designated match no. $1$ of first round; the seeded player plays the $31$ st seeded player which is designated match no $2$ of first round and so on. Thus, for instance, match no $16$ of first round is to be played between $16$th player and the $17$th seeded player. In the second round, the winner of match no $1$ of first round plays the winner of match no $16$ of first round and is designated match no $1$ of second round. Similarly the winner of match no $2$, of first round plays the winner of match no $15$ of first round, and is designated match no $2$ of second round. Thus for instance, match no $8$ of the second round is to be played between the winner of match no $8$ of first round and the winner of match no $9$ of first round. The same pattern is followed for later rounds as well.

| Seed # | Name of Player | Seed # | Name of Player | Seed # | Name of Player |
|---|---|---|---|---|---|
| 1 | Maria Sharapova | 12 | Mary Pierce | 23 | Silvia Farina Elia |
| 2 | Lindsay Davensport | 13 | Anastasia Myskina | 24 | Tatiana Golovin |
| 3 | Amelie Maureso | 14 | Alicia Molik | 25 | Shinobu Asagoe |
| 4 | Kim Clijesters | 15 | Nathalie Detchy | 26 | Francesca Schiavone |
| 5 | Svetlana Kuznetsova | 16 | Elena Bovina | 27 | Nicole Vaidisova |
| 6 | Elena Dematieva | 17 | Jelena Jankovic | 28 | Gisela Dulko |

| | | | | | |
|---|---|---|---|---|---|
| 7 | Justine Henin | 18 | Ana Ivanovic | 29 | Flavia Pennetta |
| 8 | Serena Williams | 19 | Vera Zvonareva | 30 | Anna Chakvetadze |
| 9 | Nadia Petrova | 20 | Elena Lukhovtseva | 31 | Ai Sugiyama |
| 10 | Venus Williams | 21 | Daniella Hantuchova | 32 | Anna-lena Gronefeld |
| 11 | Patty Schnyder | 22 | Dinara Safina | | |

If there are no upsets ( the lower seeded player beating higher seeded player) in the first round, and only the match nos $6, 7$ and $8$ of the second round result in upsets, then who would meet Lindsay Davenport in quarter finals, in case, Davenport reaches quarter finals?

A. Justine Henin
B. Nadia Petrova
C. Patty Schnyder
D. Venus Williams

cat2005 data-interpretation tabular-data

## 1.7.104 Tabular Data: CAT 2005 | Question: 72 top

**Answer the following question based on the information given below:**

In the table below is the listing of players, seeded from highest $(\#1)$ to the lowest $(\#32)$, who are due to play in an Association of Tennis Players (ATP) tournament for women. This tournament has four knockout rounds before the final, i.e., first round, second round, quarter finals and semi-finals. In the first round, the highest seeded player plays the lowest seeded player (seed $\#32$) which is designated match no. $1$ of first round; the seeded player plays the $31$ st seeded player which is designated match no $2$ of first round and so on. Thus, for instance, match no $16$ of first round is to be played between $16$th player and the $17$th seeded player. In the second round, the winner of match no $1$ of first round plays the winner of match no $16$ of first round and is designated match no $1$ of second round. Similarly the winner of match no $2$, of first round plays the winner of match no $15$ of first round, and is designated match no $2$ of second round. Thus for instance, match no $8$ of the second round is to be played between the winner of match no $8$ of first round and the winner of match no $9$ of first round. The same pattern is followed for later rounds as well.

| Seed # | Name of Player | Seed # | Name of Player | Seed # | Name of Player |
|---|---|---|---|---|---|
| 1 | Maria Sharapova | 12 | Mary Pierce | 23 | Silvia Farina Elia |
| 2 | Lindsay Davensport | 13 | Anastasia Myskina | 24 | Tatiana Golovin |
| 3 | Amelie Maureso | 14 | Alicia Molik | 25 | Shinobu Asagoe |
| 4 | Kim Clijesters | 15 | Nathalie Detchy | 26 | Francesca Schiavone |
| 5 | Svetlana Kuznetsova | 16 | Elena Bovina | 27 | Nicole Vaidisova |
| 6 | Elena Dematieva | 17 | Jelena Jankovic | 28 | Gisela Dulko |
| 7 | Justine Henin | 18 | Ana Ivanovic | 29 | Flavia Pennetta |
| 8 | Serena Williams | 19 | Vera Zvonareva | 30 | Anna Chakvetadze |
| 9 | Nadia Petrova | 20 | Elena Lukhovtseva | 31 | Ai Sugiyama |
| 10 | Venus Williams | 21 | Daniella Hantuchova | 32 | Anna-lena Gronefeld |
| 11 | Patty Schnyder | 22 | Dinara Safina | | |

If Elena Dementieva and Serena Williams lose in the second round, while Justinee Henin and Nadia Petrova make it to the semi-finals, then who would play Maria Sharapova in the quarter finals, in the event of Sharapova reaches the quarter finals?

A. Dinara Safina
B. Justine Henin
C. Nadia Petrova
D. Patty Schnyder

cat2005 data-interpretation tabular-data

## 1.7.105 Tabular Data: CAT 2005 | Question: 73 top

**Answer the following question based on the information given below:**

In the table below is the listing of players, seeded from highest $(\#1)$ to the lowest $(\#32)$, who are due to play in an Association of Tennis Players (ATP) tournament for women. This tournament has four knockout rounds before the final, i.e., first round, second round, quarter finals and semi-finals. In the first round, the highest seeded player plays the lowest seeded player (seed $\#32$) which is designated match no. $1$ of first round; the seeded player plays the $31$ st seeded player which is designated match no $2$ of first round and so on. Thus, for instance, match no $16$ of first round is to be played between $16$th player and the $17$th seeded player. In the second round, the winner of match no $1$ of first round plays the winner of match no $16$ of first round and is designated match no $1$ of second round. Similarly the winner of match no $2$, of first round plays the winner of match no $15$ of first round, and is designated match no $2$ of second round. Thus for instance, match no $8$ of the second round is to be played between the winner of match no $8$ of first round and the winner of match no $9$ of first round. The same pattern is followed for later rounds as well.

| Seed # | Name of Player | Seed # | Name of Player | Seed # | Name of Player |
|---|---|---|---|---|---|
| 1 | Maria Sharapova | 12 | Mary Pierce | 23 | Silvia Farina Elia |
| 2 | Lindsay Davensport | 13 | Anastasia Myskina | 24 | Tatiana Golovin |
| 3 | Amelie Maureso | 14 | Alicia Molik | 25 | Shinobu Asagoe |
| 4 | Kim Clijesters | 15 | Nathalie Detchy | 26 | Francesca Schiavone |
| 5 | Svetlana Kuznetsova | 16 | Elena Bovina | 27 | Nicole Vaidisova |
| 6 | Elena Dematieva | 17 | Jelena Jankovic | 28 | Gisela Dulko |
| 7 | Justine Henin | 18 | Ana Ivanovic | 29 | Flavia Pennetta |
| 8 | Serena Williams | 19 | Vera Zvonareva | 30 | Anna Chakvetadze |
| 9 | Nadia Petrova | 20 | Elena Lukhovtseva | 31 | Ai Sugiyama |
| 10 | Venus Williams | 21 | Daniella Hantuchova | 32 | Anna-lena Gronefeld |
| 11 | Patty Schnyder | 22 | Dinara Safina | | |

If, in the first round, all even numbered matches (and none of the odd numbered ones) result in upsets, and there are no upsets in the second round, then who could be the lowest seeded player facing Maria Sharapova in semi-finals?

A. Anastasia Myskina
B. Flavia Pennetta
C. Nadia Petrova
D. Svetlana Kuznetsova

cat2005 data-interpretation tabular-data

## 1.7.106 Tabular Data: CAT 2005 | Question: 74 top

**Answer the following question based on the information given below:**

In the table below is the listing of players, seeded from highest $(\#1)$ to the lowest $(\#32)$, who are due to play in an Association of Tennis Players (ATP) tournament for women. This tournament has four knockout rounds before the final, i.e., first round, second round, quarter finals and semi-finals. In the first round, the highest seeded player plays the lowest seeded player (seed $\#32$) which is designated match no. $1$ of first round; the seeded player plays the $31$ st seeded player which is designated match no $2$ of first round and so on. Thus, for instance, match no $16$ of first round is to be played between $16$th player and the $17$th seeded player. In the second round, the winner of match no $1$ of first round plays the winner of match no $16$ of first round and is designated match no $1$ of second round. Similarly the winner of match no $2$, of first round plays the winner of match no $15$ of first round, and is designated match no $2$ of second round. Thus for instance, match no $8$ of the

second round is to be played between the winner of match no 8 of first round and the winner of match no 9 of first round. The same pattern is followed for later rounds as well.

| Seed # | Name of Player | Seed # | Name of Player | Seed # | Name of Player |
|---|---|---|---|---|---|
| 1 | Maria Sharapova | 12 | Mary Pierce | 23 | Silvia Farina Elia |
| 2 | Lindsay Davensport | 13 | Anastasia Myskina | 24 | Tatiana Golovin |
| 3 | Amelie Maureso | 14 | Alicia Molik | 25 | Shinobu Asagoe |
| 4 | Kim Clijesters | 15 | Nathalie Detchy | 26 | Francesca Schiavone |
| 5 | Svetlana Kuznetsova | 16 | Elena Bovina | 27 | Nicole Vaidisova |
| 6 | Elena Dematieva | 17 | Jelena Jankovic | 28 | Gisela Dulko |
| 7 | Justine Henin | 18 | Ana Ivanovic | 29 | Flavia Pennetta |
| 8 | Serena Williams | 19 | Vera Zvonareva | 30 | Anna Chakvetadze |
| 9 | Nadia Petrova | 20 | Elena Lukhovtseva | 31 | Ai Sugiyama |
| 10 | Venus Williams | 21 | Daniella Hantuchova | 32 | Anna-lena Gronefeld |
| 11 | Patty Schnyder | 22 | Dinara Safina | | |

If the top eight seeds make it to the quarter finals, then who, amongst the players listed below, would definitely not play against Maria Sharapova in the final, in case Sharapova reaches the final?

A. Amelie Mauresmo
B. Elena Dementieva
C. Kim Clijsters
D. Lindsay Davenport

## 1.7.107 Tabular Data: CAT 2006 | Question: 1 top

**Answer the given question based on the information given below**

In a Class X Board examination, ten papers are distributed over five groups i.e., PCB, Mathematics, Social Science, Vernacular and English. Each of the ten papers is evaluated out of 100. The final score of the student is calculated in the following manner. First the Group Scores are obtained by averaging the marks in the papers within the group. The final score is the simple average of the Group Scores. The data for the top tem students are given below. (Dipan's score in English paper II has been intentionally removed from the table).

| | PCB Group | | | Mathematics Group | Social Science Group | | Vernacular Group | | English Group | | Final Score |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Name of the student | Phy | Che | Bio | | Hist | Geo | Paper I | Paper II | Paper I | Paper II | |
| Ayesh (G) | 98 | 96 | 97 | 98 | 95 | 93 | 94 | 96 | 96 | 98 | 96.2 |
| Ram (B) | 97 | 99 | 95 | 97 | 95 | 96 | 94 | 94 | 96 | 98 | 96.1 |
| Dipan (B) | 98 | 98 | 98 | 95 | 96 | 95 | 96 | 94 | 96 | ?? | 96.0 |
| Sagnik (B) | 97 | 98 | 99 | 96 | 96 | 98 | 94 | 97 | 92 | 94 | 95.9 |

| | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Sanjiv (B) | 95 | 96 | 97 | 98 | 97 | 96 | 92 | 93 | 95 | 96 | 95.7 |
| Shreya (G) | 96 | 89 | 85 | 100 | 97 | 98 | 94 | 95 | 96 | 95 | 95.5 |
| Joseph (B) | 90 | 94 | 98 | 100 | 94 | 97 | 90 | 92 | 94 | 95 | 95.0 |
| Agni (B) | 96 | 99 | 96 | 99 | 95 | 96 | 82 | 93 | 92 | 93 | 94.3 |
| Pritam (B) | 98 | 98 | 95 | 98 | 83 | 95 | 90 | 93 | 94 | 94 | 93.9 |
| Tirna (G) | 96 | 98 | 79 | 99 | 85 | 94 | 92 | 91 | 87 | 96 | 93.7 |

**Note:** B or G against the name of the student respectively indicates whether the student is a boy or girl

How much did Dipan get in English paper II?

A. 94 B. 96.5 C. 97 D. 98 E. 99

| Shreya (G) | 96 | 89 | 85 | 100 | 97 | 98 | 94 | 95 | 96 | 95 | 95.5 |
| Joseph (B) | 90 | 94 | 98 | 100 | 94 | 97 | 90 | 92 | 94 | 95 | 95.0 |
| Agni (B) | 96 | 99 | 96 | 99 | 95 | 96 | 82 | 93 | 92 | 93 | 94.3 |
| Pritam (B) | 98 | 98 | 95 | 98 | 83 | 95 | 90 | 93 | 94 | 94 | 93.9 |
| Tirna (G) | 96 | 98 | 79 | 99 | 85 | 94 | 92 | 91 | 87 | 96 | 93.7 |

**Note:** B or G against the name of the student respectively indicates whether the student is a boy or girl

Among the top ten students, how many boys scored at least 95 in at least one paper from each of the group?

A. 1 B. 2 C. 3 D. 4 E. 5

cat2006 data-interpretation tabular-data

## 1.7.110 Tabular Data: CAT 2006 | Question: 4 top

**Answer the given question based on the information given below**

In a Class X Board examination, ten papers are distributed over five groups i.e., PCB, Mathematics, Social Science, Vernacular and English. Each of the ten papers is evaluated out of 100. The final score of the student is calculated in the following manner. First the Group Scores are obtained by averaging the marks in the papers within the group. The final score is the simple average of the Group Scores. The data for the top tem students are given below. (Dipan's score in English paper II has been intentionally removed from the table).

| | PCB Group | | Mathematics | Social Science Group | Vernacular Group | English Group | Final |
|---|---|---|---|---|---|---|---|

| Name of the student | Phy | Che | Bio | Group | Hist | Geo | Paper I | Paper II | Paper I | Paper II | Score |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Ayesh (G) | 98 | 96 | 97 | 98 | 95 | 93 | 94 | 96 | 96 | 98 | 96.2 |
| Ram (B) | 97 | 99 | 95 | 97 | 95 | 96 | 94 | 94 | 96 | 98 | 96.1 |
| Dipan (B) | 98 | 98 | 98 | 95 | 96 | 95 | 96 | 94 | 96 | ?? | 96.0 |
| Sagnik (B) | 97 | 98 | 99 | 96 | 96 | 98 | 94 | 97 | 92 | 94 | 95.9 |
| Sanjiv (B) | 95 | 96 | 97 | 98 | 97 | 96 | 92 | 93 | 95 | 96 | 95.7 |
| Shreya (G) | 96 | 89 | 85 | 100 | 97 | 98 | 94 | 95 | 96 | 95 | 95.5 |
| Joseph (B) | 90 | 94 | 98 | 100 | 94 | 97 | 90 | 92 | 94 | 95 | 95.0 |
| Agni (B) | 96 | 99 | 96 | 99 | 95 | 96 | 82 | 93 | 92 | 93 | 94.3 |
| Pritam (B) | 98 | 98 | 95 | 98 | 83 | 95 | 90 | 93 | 94 | 94 | 93.9 |
| Tirna (G) | 96 | 98 | 79 | 99 | 85 | 94 | 92 | 91 | 87 | 96 | 93.7 |

**Note:** B or G against the name of the student respectively indicates whether the student is a boy or girl

Each of the ten students was allowed to improve his/her score in exactly one paper of choice with the objective of maximizing his/her final score. Everyone scored 100 in the paper in which he or she chose to improve. After that the topper among the ten student was

A. Ram B. Agni C. Pritam D. Ayesha E. Dipan

cat2006 data-interpretation tabular-data

## 1.7.111 Tabular Data: CAT 2006 | Question: 5 top

**Answer the given question based on the information given below**

In a Class X Board examination, ten papers are distributed over five groups i.e., PCB, Mathematics, Social Science, Vernacular and English. Each of the ten papers is evaluated out of 100. The final score of the student is calculated in the following manner. First the Group Scores are obtained by averaging the marks in the papers within the group. The final score is the simple average of the Group Scores. The data for the top tem students are given below. (Dipan's score in English paper II has been intentionally removed from the table).

| | PCB Group | | | Mathematics Group | Social Science Group | | Vernacular Group | | English Group | | Final Score |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Name of the student | Phy | Che | Bio | | Hist | Geo | Paper I | Paper II | Paper I | Paper II | |
| Ayesh (G) | 98 | 96 | 97 | 98 | 95 | 93 | 94 | 96 | 96 | 98 | 96.2 |
| Ram (B) | 97 | 99 | 95 | 97 | 95 | 96 | 94 | 94 | 96 | 98 | 96.1 |
| Dipan (B) | 98 | 98 | 98 | 95 | 96 | 95 | 96 | 94 | 96 | ?? | 96.0 |
| Sagnik (B) | 97 | 98 | 99 | 96 | 96 | 98 | 94 | 97 | 92 | 94 | 95.9 |

| | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Sanjiv (B) | 95 | 96 | 97 | 98 | 97 | 96 | 92 | 93 | 95 | 96 | 95.7 |
| Shreya (G) | 96 | 89 | 85 | 100 | 97 | 98 | 94 | 95 | 96 | 95 | 95.5 |
| Joseph (B) | 90 | 94 | 98 | 100 | 94 | 97 | 90 | 92 | 94 | 95 | 95.0 |
| Agni (B) | 96 | 99 | 96 | 99 | 95 | 96 | 82 | 93 | 92 | 93 | 94.3 |
| Pritam (B) | 98 | 98 | 95 | 98 | 83 | 95 | 90 | 93 | 94 | 94 | 93.9 |
| Tirna (G) | 96 | 98 | 79 | 99 | 85 | 94 | 92 | 91 | 87 | 96 | 93.7 |

**Note:** B or G against the name of the student respectively indicates whether the student is a boy or girl

Had Joseph, Agni, Pritam and Tirna each obtained Group Score of $100$ in the Social Science Group, then their standing in decreasing order of final score would be

A. Pritam, Joseph, Tirna, Agni
B. Joseph, Tirna, Agni, Pritam
C. Pritam, Agni, Tirna, Joseph
D. Joseph, Tirna, Pritam, Agni
E. Pritam, Tirna, Agni, Joseph

## 1.7.112 Tabular Data: CAT 2007 | Question: 30 top

**Answer the following question based on the information given below:**

The proportion of male students and the proportion of vegetarian student students in a school are given below. The school has total of $800$ students, $80\%$ of whom are in the Secondary Section and rest equally divided between Class $11$ and $12$.

| | Male(M) | Vegetarian (V) |
|---|---|---|
| Class 12 | 0.6 | |
| Class 11 | 0.55 | 0.5 |
| Secondary Section | | 0.55 |
| Total | 0.475 | 0.53 |

What is the percentage of vegetarian students in Class $12$?

A. $40$ B. $45$ C. $50$ D. $55$ E. $60$

cat2007 data-interpretation tabular-data

## 1.7.113 Tabular Data: CAT 2007 | Question: 31 top

**Answer the following question based on the information given below:**

The proportion of male students and the proportion of vegetarian student students in a school are given below. The school has total of $800$ students, $80\%$ of whom are in the Secondary Section and rest equally divided between Class $11$ and $12$.

| | Male(M) | Vegetarian (V) |
|---|---|---|
| Class 12 | 0.6 | |
| Class 11 | 0.55 | 0.5 |
| Secondary Section | | 0.55 |
| Total | 0.475 | 0.53 |

In Class $12$, $25\%$ of vegetarian are male. What is the difference between the number of female vegetarians and male non-vegetarians?

A. less than 8 B. $10$ C. $12$ D. $14$ E. $16$

cat2007 data-interpretation tabular-data

## 1.7.114 Tabular Data: CAT 2007 | Question: 32 top

**Answer the following question based on the information given below:**

The proportion of male students and the proportion of vegetarian student students in a school are given below. The school has total of $800$ students, $80\%$ of whom are in the Secondary Section and rest equally divided between Class $11$ and $12$.

| | Male(M) | Vegetarian (V) |
|---|---|---|
| Class 12 | 0.6 | |
| Class 11 | 0.55 | 0.5 |
| Secondary Section | | 0.55 |
| Total | 0.475 | 0.53 |

What is the percentage of male students in the secondary section?

A. 40 B. 45 C. 50 D. 55 E. 60

cat2007 data-interpretation tabular-data

## 1.7.115 Tabular Data: CAT 2007 | Question: 33 top

**Answer the following question based on the information given below:**

The proportion of male students and the proportion of vegetarian student students in a school are given below. The school has total of 800 students, 80% of whom are in the Secondary Section and rest equally divided between Class 11 and 12.

| | Male(M) | Vegetarian (V) |
|---|---|---|
| Class 12 | 0.6 | |
| Class 11 | 0.55 | 0.5 |
| Secondary Section | | 0.55 |
| Total | 0.475 | 0.53 |

In the Secondary Section, 50% of the students are vegetarian males . Which of the following statements is correct?

A. Except vegetarian males, all other groups have same number of students.
B. Except non-vegetarian males, all other groups have same number of students.
C. Except vegetarian females, all other groups have same number of students.
D. Except non-vegetarian females, all other groups have same number of students.
E. All of the above groups have same number of students.

## 1.7.116 Tabular Data: CAT 2007 | Question: 34 top

**Answer the following question based on the information given below:**

The following table shows the break-up actual costs incurred by a company in last five years [year 2002 to year 2006] to produce a particular product.

The production capacity of the company is 2000 units. The selling price for the year 2006 was Rs. 125 per unit. Some costs change almost in direct proportion to the change in volume of production, while the other do not follow any obvious pattern of change with respect to the volume of production and hence are considered fixed. Using the information provided for the year 2006 as the basis for projecting the figures for the year 2007, answer the following questions

| | Year 2002 | Year 2003 | Year 2004 | Year 2005 | Year 2006 |
|---|---|---|---|---|---|
| Volume of production | 1000 | 900 | 1100 | 1200 | 1200 |
| Cost(Rs) | | | | | |
| Material | 50,000 | 45,100 | 55, 200 | 59, 900 | 60, 000 |
| Labour | 20,000 | 18,000 | 22, 100 | 24,150 | 24,000 |
| Consumables | 2,000 | 2,200 | 1,800 | 1,600 | 1,400 |
| Rent of building | 1000 | 1000 | 1100 | 1100 | 1200 |
| Repair and maintenance expenses | 800 | 820 | 780 | 790 | 800 |
| Operating cost of machines | 30,000 | 27,000 | 33,500 | 36,020 | 36,000 |

| | | | | | |
|---|---|---|---|---|---|
| Rates and taxes | 400 | 400 | 400 | 400 | 400 |
| Selling and marketing expenses | 5,750 | 5,800 | 5, 800 | 5,750 | 5,800 |

What is the approximate cost per unit in rupees, if the company produces and sells 1400 units in the year of 2007?

A. 104 B. 107 C. 110 D. 115 E. 116

cat2007 data-interpretation tabular-data

## 1.7.117 Tabular Data: CAT 2007 | Question: 35 top

**Answer the following question based on the information given below:**

The following table shows the break-up actual costs incurred by a company in last five years [year 2002 to year 2006] to produce a particular product.

The production capacity of the company is 2000 units. The selling price for the year 2006 was Rs. 125 per unit. Some costs change almost in direct proportion to the change in volume of production, while the other do not follow any obvious pattern of change with respect to the volume of production and hence are considered fixed. Using the information provided for the year 2006 as the basis for projecting the figures for the year 2007, answer the following questions

| | Year 2002 | Year 2003 | Year 2004 | Year 2005 | Year 2006 |
|---|---|---|---|---|---|
| Volume of production | 1000 | 900 | 1100 | 1200 | 1200 |
| Cost(Rs) | | | | | |
| Material | 50,000 | 45,100 | 55, 200 | 59, 900 | 60, 000 |
| Labour | 20,000 | 18,000 | 22, 100 | 24,150 | 24,000 |
| Consumables | 2,000 | 2,200 | 1,800 | 1,600 | 1,400 |
| Rent of building | 1000 | 1000 | 1100 | 1100 | 1200 |
| Repair and maintenance expenses | 800 | 820 | 780 | 790 | 800 |
| Operating cost of machines | 30,000 | 27,000 | 33,500 | 36,020 | 36,000 |
| Rates and taxes | 400 | 400 | 400 | 400 | 400 |
| Selling and marketing expenses | 5,750 | 5,800 | 5, 800 | 5,750 | 5,800 |

What is the minimum number of units that the company needs to produce and sell to avoid any loss?

A. 313 B. 350 C. 383 D. 747 E. 928

cat2007 data-interpretation tabular-data

## 1.7.118 Tabular Data: CAT 2007 | Question: 36 top

**Answer the following question based on the information given below:**

The following table shows the break-up actual costs incurred by a company in last five years [year 2002 to year 2006] to produce a particular product.

The production capacity of the company is 2000 units. The selling price for the year 2006 was Rs. 125 per unit. Some costs change almost in direct proportion to the change in volume of production, while the other do not follow any obvious pattern of

change with respect to the volume of production and hence are considered fixed. Using the information provided for the year 2006 as the basis for projecting the figures for the year 2007, answer the following questions

| | Year 2002 | Year 2003 | Year 2004 | Year 2005 | Year 2006 |
|---|---|---|---|---|---|
| Volume of production | 1000 | 900 | 1100 | 1200 | 1200 |
| Cost(Rs) | | | | | |
| Material | 50,000 | 45,100 | 55, 200 | 59, 900 | 60, 000 |
| Labour | 20,000 | 18,000 | 22, 100 | 24,150 | 24,000 |
| Consumables | 2,000 | 2,200 | 1,800 | 1,600 | 1,400 |
| Rent of building | 1000 | 1000 | 1100 | 1100 | 1200 |
| Repair and maintenance expenses | 800 | 820 | 780 | 790 | 800 |
| Operating cost of machines | 30,000 | 27,000 | 33,500 | 36,020 | 36,000 |
| Rates and taxes | 400 | 400 | 400 | 400 | 400 |
| Selling and marketing expenses | 5,750 | 5,800 | 5, 800 | 5,750 | 5,800 |

Given that the company cannot sell more than 1700 units, and it will have to reduce the price by Rs. 5 for all units, if it wants to sell more than 1400 units, what is the maximum profit, in rupees, the company can earn?

A. $25,400$ B. $24,400$ C. $31,400$ D. $32,900$ E. $32,000$

cat2007 data-interpretation tabular-data

## 1.7.119 Tabular Data: CAT 2007 | Question: 37 top

**Answer the following question based on the information given below:**

The following table shows the break-up actual costs incurred by a company in last five years [year 2002 to year 2006] to produce a particular product.

The production capacity of the company is 2000 units. The selling price for the year 2006 was Rs. 125 per unit. Some costs change almost in direct proportion to the change in volume of production, while the other do not follow any obvious pattern of change with respect to the volume of production and hence are considered fixed. Using the information provided for the year 2006 as the basis for projecting the figures for the year 2007, answer the following questions

| | Year 2002 | Year 2003 | Year 2004 | Year 2005 | Year 2006 |
|---|---|---|---|---|---|
| Volume of production | 1000 | 900 | 1100 | 1200 | 1200 |
| Cost(Rs) | | | | | |
| Material | 50,000 | 45,100 | 55, 200 | 59, 900 | 60, 000 |
| Labour | 20,000 | 18,000 | 22, 100 | 24,150 | 24,000 |
| Consumables | 2,000 | 2,200 | 1,800 | 1,600 | 1,400 |
| Rent of building | 1000 | 1000 | 1100 | 1100 | 1200 |

| | | | | | |
|---|---|---|---|---|---|
| Repair and maintenance expenses | 800 | 820 | 780 | 790 | 800 |
| Operating cost of machines | 30,000 | 27,000 | 33,500 | 36,020 | 36,000 |
| Rates and taxes | 400 | 400 | 400 | 400 | 400 |
| Selling and marketing expenses | 5,750 | 5,800 | 5, 800 | 5,750 | 5,800 |

If the company reduces the price by $5\%$, it can produce and sell as many units as it desires. How many units the company should produce to maximize its profit?

A. 1400 B. 1600 C. 1800 D. 1900 E. 2000

## 1.7.120 Tabular Data: CAT 2007 | Question: 38 top

**Answer the following question based on the information given below**

The table shows the comparative costs, in US Dollars, of major surgeries in USA and a select few Asian countries.

| **Procedure** | **Comparative Costs in USA and some Asian countries (in US Dollars)** | | | | |
|---|---|---|---|---|---|
| | **USA** | **India** | **Thailand** | **Singapore** | **Malaysia** |
| Heart Bypass | 130000 | 10000 | 11000 | 18500 | 9000 |
| Heart Valve Replacement | 160000 | 9000 | 10000 | 12500 | 9000 |
| Angioplasty | 57000 | 11000 | 13000 | 13000 | 11000 |
| Hip Replacement | 43000 | 9000 | 12000 | 12000 | 10000 |
| Hysterectomy | 20000 | 3000 | 4500 | 6000 | 3000 |
| Knee Replacement | 40000 | 8500 | 10000 | 13000 | 8000 |
| Spinal Fusion | 62000 | 5500 | 7000 | 9000 | 6000 |

The equivalent of one US Dollar in the total currencies is given below:

| | **1 US Dollar Equivalent** | |
|---|---|---|
| India | 40.928 | Rupees |
| Malaysia | 3.51 | Ringits |
| Thailand | 32.89 | Bahts |
| Singapore | 1.53 | Dollars |

A consulting firm found that the quality of the health services were not the same in all the countries above. A poor quality surgery may have significant repercussions in future, resulting in more cost in correcting mistakes. The cost of poor quality surgery is given in the table below:

| **Procedure** | **Comparative Costs in USA and some Asian countries (in US Dollars)** | | | | |
|---|---|---|---|---|---|
| | **USA** | **India** | **Thailand** | **Singapore** | **Malaysia** |
| Heart Bypass | 0 | 3 | 3 | 2 | 4 |
| Heart Valve Replacement | 0 | 5 | 4 | 5 | 5 |
| Angioplasty | 0 | 5 | 5 | 4 | 6 |
| Hip Replacement | 0 | 7 | 5 | 5 | 8 |
| Hysterectomy | 0 | 5 | 6 | 5 | 4 |
| Knee Replacement | 0 | 9 | 6 | 4 | 4 |
| Spinal Fusion | 0 | 5 | 6 | 5 | 6 |

The rupee value increases to Rs. 35 for a US Dollar, and all other things including quality, remain the same. What is the approximate difference in cost, in US Dollars, between Singapore and India for a Spinal Fusion, taking this change into account?

A. 700 B. 2500 C. 4500 D. 8000 E. No difference

cat2007 data-interpretation tabular-data

## 1.7.121 Tabular Data: CAT 2007 | Question: 39 top

**Answer the following question based on the information given below**

The table shows the comparative costs, in US Dollars, of major surgeries in USA and a select few Asian countries.

| **Procedure** | **Comparative Costs in USA and some Asian countries (in US Dollars)** | | | | |
|---|---|---|---|---|---|
| | **USA** | **India** | **Thailand** | **Singapore** | **Malaysia** |
| Heart Bypass | 130000 | 10000 | 11000 | 18500 | 9000 |
| Heart Valve Replacement | 160000 | 9000 | 10000 | 12500 | 9000 |
| Angioplasty | 57000 | 11000 | 13000 | 13000 | 11000 |
| Hip Replacement | 43000 | 9000 | 12000 | 12000 | 10000 |
| Hysterectomy | 20000 | 3000 | 4500 | 6000 | 3000 |
| Knee Replacement | 40000 | 8500 | 10000 | 13000 | 8000 |
| Spinal Fusion | 62000 | 5500 | 7000 | 9000 | 6000 |

The equivalent of one US Dollar in the total currencies is given below:

| | **1 US Dollar Equivalent** | |
|---|---|---|
| India | 40.928 | Rupees |
| Malaysia | 3.51 | Ringits |
| Thailand | 32.89 | Bahts |
| Singapore | 1.53 | $ Dollars |

A consulting firm found that the quality of the health services were not the same in all the countries above. A poor quality surgery may have significant repercussions in future, resulting in more cost in correcting mistakes. The cost of poor quality surgery is given in the table below:

| **Procedure** | **Comparative Costs in USA and some Asian countries (in US Dollars)** | | | | |
|---|---|---|---|---|---|
| | **USA** | **India** | **Thailand** | **Singapore** | **Malaysia** |
| Heart Bypass | 0 | 3 | 3 | 2 | 4 |
| Heart Valve Replacement | 0 | 5 | 4 | 5 | 5 |
| Angioplasty | 0 | 5 | 5 | 4 | 6 |
| Hip Replacement | 0 | 7 | 5 | 5 | 8 |
| Hysterectomy | 0 | 5 | 6 | 5 | 4 |
| Knee Replacement | 0 | 9 | 6 | 4 | 4 |
| Spinal Fusion | 0 | 5 | 6 | 5 | 6 |

Approximately, what difference in amount in Bahts will make it to a Thai citizen if she were to get a hysterectomy done in India instead of in her native country, taking into account the cost of poor quality? It costs 7500 Bhats for one-vary travel between Thailand and India.

A. 23500 B. 40500 C. 57500 D. 67500 E. 75000

cat2007 data-interpretation tabular-data

## 1.7.122 Tabular Data: CAT 2007 | Question: 40 top

**Answer the following question based on the information given below**

The table shows the comparative costs, in US Dollars, of major surgeries in USA and a select few Asian countries.

| **Procedure** | **Comparative Costs in USA and some Asian countries (in US Dollars)** | | | | |
|---|---|---|---|---|---|
| | **USA** | **India** | **Thailand** | **Singapore** | **Malaysia** |
| Heart Bypass | 130000 | 10000 | 11000 | 18500 | 9000 |
| Heart Valve Replacement | 160000 | 9000 | 10000 | 12500 | 9000 |
| Angioplasty | 57000 | 11000 | 13000 | 13000 | 11000 |
| Hip Replacement | 43000 | 9000 | 12000 | 12000 | 10000 |
| Hysterectomy | 20000 | 3000 | 4500 | 6000 | 3000 |
| Knee Replacement | 40000 | 8500 | 10000 | 13000 | 8000 |
| Spinal Fusion | 62000 | 5500 | 7000 | 9000 | 6000 |

The equivalent of one US Dollar in the total currencies is given below:

| | **1 US Dollar Equivalent** | |
|---|---|---|
| India | 40.928 | Rupees |
| Malaysia | 3.51 | Ringits |
| Thailand | 32.89 | Bahts |
| Singapore | 1.53 | $ Dollars |

A consulting firm found that the quality of the health services were not the same in all the countries above. A poor quality surgery may have significant repercussions in future, resulting in more cost in correcting mistakes. The cost of poor quality surgery is given in the table below:

| **Procedure** | **Comparative Costs in USA and some Asian countries (in US Dollars)** | | | | |
|---|---|---|---|---|---|
| | **USA** | **India** | **Thailand** | **Singapore** | **Malaysia** |
| Heart Bypass | 0 | 3 | 3 | 2 | 4 |
| Heart Valve Replacement | 0 | 5 | 4 | 5 | 5 |
| Angioplasty | 0 | 5 | 5 | 4 | 6 |
| Hip Replacement | 0 | 7 | 5 | 5 | 8 |
| Hysterectomy | 0 | 5 | 6 | 5 | 4 |
| Knee Replacement | 0 | 9 | 6 | 4 | 4 |
| Spinal Fusion | 0 | 5 | 6 | 5 | 6 |

A US citizen is hurt in an accident and requires an angioplasty, hip replacement and knee replacement. Cost of foreign travel and stay is not a consideration since the government will take care of it. Which country will result in the cheapest package, taking cost of poor quality into account?

A. India B. Thailand C. Malaysia D. Singapore E. USA

cat2007 data-interpretation tabular-data

## 1.7.123 Tabular Data: CAT 2007 | Question: 41 top

**Answer the following question based on the information given below**

The table shows the comparative costs, in US Dollars, of major surgeries in USA and a select few Asian countries.

| Procedure | Comparative Costs in USA and some Asian countries (in US Dollars) | | | | |
|---|---|---|---|---|---|
| | USA | India | Thailand | Singapore | Malaysia |
| Heart Bypass | 130000 | 10000 | 11000 | 18500 | 9000 |
| Heart Valve Replacement | 160000 | 9000 | 10000 | 12500 | 9000 |
| Angioplasty | 57000 | 11000 | 13000 | 13000 | 11000 |
| Hip Replacement | 43000 | 9000 | 12000 | 12000 | 10000 |
| Hysterectomy | 20000 | 3000 | 4500 | 6000 | 3000 |
| Knee Replacement | 40000 | 8500 | 10000 | 13000 | 8000 |
| Spinal Fusion | 62000 | 5500 | 7000 | 9000 | 6000 |

The equivalent of one US Dollar in the total currencies is given below:

| | 1 US Dollar Equivalent | |
|---|---|---|
| India | 40.928 | Rupees |
| Malaysia | 3.51 | Ringits |
| Thailand | 32.89 | Bahts |
| Singapore | 1.53 | $ Dollars |

A consulting firm found that the quality of the health services were not the same in all the countries above. A poor quality surgery may have significant repercussions in future, resulting in more cost in correcting mistakes. The cost of poor quality surgery is given in the table below:

| Procedure | Comparative Costs in USA and some Asian countries (in US Dollars) | | | | |
|---|---|---|---|---|---|
| | USA | India | Thailand | Singapore | Malaysia |
| Heart Bypass | 0 | 3 | 3 | 2 | 4 |
| Heart Valve Replacement | 0 | 5 | 4 | 5 | 5 |
| Angioplasty | 0 | 5 | 5 | 4 | 6 |
| Hip Replacement | 0 | 7 | 5 | 5 | 8 |
| Hysterectomy | 0 | 5 | 6 | 5 | 4 |
| Knee Replacement | 0 | 9 | 6 | 4 | 4 |
| Spinal Fusion | 0 | 5 | 6 | 5 | 6 |

Taking the cost of poor quality into account which country/countries will be the most expensive for knee replacement?

A. India B. Thailand C. Malaysia D. Singapore E. India and Singapore

## 1.7.124 Tabular Data: CAT 2007 | Question: 42 top

**Answer the following question based on the information given below:**

A low-cost airline company connects ten Indian cities, A to J. The table below gives the distance between a pair of airports and the corresponding price charged by the company. Travel is permitted only from a departure to an arrival airport. The customers do not travel by a route where they have to stop at more than two intermediate airports.

| Sector No. | Airport of Departure | Airport of Arrival | Distance between the airports (km.) | Price (Rs.) |
|---|---|---|---|---|
| 1 | A | B | 560 | 670 |
| 2 | A | C | 790 | 1350 |

| | | | | |
|---|---|---|---|---|
| 3 | A | D | 850 | 1250 |
| 4 | A | E | 1245 | 1600 |
| 5 | A | F | 1345 | 1700 |
| 6 | A | G | 1350 | 2450 |
| 7 | A | H | 1950 | 1850 |
| 8 | B | C | 1650 | 2000 |
| 9 | B | H | 1750 | 1900 |
| 10 | B | I | 2100 | 2450 |
| 11 | B | J | 2300 | 2275 |
| 12 | C | D | 460 | 450 |
| 13 | C | F | 410 | 430 |
| 14 | C | G | 910 | 1100 |
| 15 | D | E | 540 | 590 |
| 16 | D | F | 625 | 700 |
| 17 | D | G | 640 | 750 |
| 18 | D | H | 950 | 1250 |
| 19 | D | J | 1650 | 2450 |
| 20 | E | F | 1250 | 1700 |
| 21 | E | G | 970 | 1150 |
| 22 | E | H | 850 | 875 |
| 23 | F | G | 900 | 1050 |
| 24 | F | I | 875 | 950 |
| 25 | F | J | 970 | 1150 |
| 26 | G | I | 510 | 550 |
| 27 | G | J | 830 | 890 |
| 28 | H | I | 790 | 970 |
| 29 | H | J | 400 | 425 |
| 30 | I | J | 460 | 540 |

What is the lowest price, in rupees, a passenger has to pay for travelling by the shortest route from A to J?

A. 2275 B. 2850 C. 2890 D. 2930 E. 3340

## 1.7.125 Tabular Data: CAT 2007 | Question: 43 top

**Answer the following question based on the information given below:**

A low-cost airline company connects ten Indian cities, A to J. The table below gives the distance between a pair of airports and the corresponding price charged by the company. Travel is permitted only from a departure to an arrival airport. The customers do not travel by a route where they have to stop at more than two intermediate airports.

| Sector No. | Airport of Departure | Airport of Arrival | Distance between the airports (km.) | Price (Rs.) |
|---|---|---|---|---|
| 1 | A | B | 560 | 670 |
| 2 | A | C | 790 | 1350 |
| 3 | A | D | 850 | 1250 |
| 4 | A | E | 1245 | 1600 |
| 5 | A | F | 1345 | 1700 |
| 6 | A | G | 1350 | 2450 |
| 7 | A | H | 1950 | 1850 |
| 8 | B | C | 1650 | 2000 |
| 9 | B | H | 1750 | 1900 |

| | | | | |
|---|---|---|---|---|
| 10 | B | I | 2100 | 2450 |
| 11 | B | J | 2300 | 2275 |
| 12 | C | D | 460 | 450 |
| 13 | C | F | 410 | 430 |
| 14 | C | G | 910 | 1100 |
| 15 | D | E | 540 | 590 |
| 16 | D | F | 625 | 700 |
| 17 | D | G | 640 | 750 |
| 18 | D | H | 950 | 1250 |
| 19 | D | J | 1650 | 2450 |
| 20 | E | F | 1250 | 1700 |
| 21 | E | G | 970 | 1150 |
| 22 | E | H | 850 | 875 |
| 23 | F | G | 900 | 1050 |
| 24 | F | I | 875 | 950 |
| 25 | F | J | 970 | 1150 |
| 26 | G | I | 510 | 550 |
| 27 | G | J | 830 | 890 |
| 28 | H | I | 790 | 970 |
| 29 | H | J | 400 | 425 |
| 30 | I | J | 460 | 540 |

The company plans to introduce a direct flight between A to J. The market research results indicate that all its existing passengers travelling between A to J will use this direct flight if it is priced 5% below the minimum price that they pay at present. What should the company charge approximately, in rupees, for this direct flight?

A. 1991 B. 2161 C. 2707 D. 2745 E. 2783

## 1.7.129 Tabular Data: CAT 2007 | Question: 47 top

**Answer the following question based on the information given below:**

A health-drink company's R & D department is trying to make various diet formulations, which can be used for certain specific purposes. It is considering a choice of 5 alternative ingredients (O, P, Q, R and S), which can be used in different proportions in the formulations. The table below gives the compositions of these ingredients. The cost per unit of each of these ingredients is O: 150, P: 50, Q: 200, R: 500, S: 100.

| | Composition | | | |
|---|---|---|---|---|
| Ingredient | Carbohydrate% | Protein % | Fat % | Minerals% |
| O | 50 | 30 | 10 | 10 |
| P | 80 | 20 | 0 | 0 |
| Q | 10 | 30 | 50 | 10 |
| R | 5 | 50 | 40 | 5 |
| S | 45 | 50 | 0 | 5 |

The company is planning to launch a balanced diet required for growth needs of adolescent children. The diet must contain at least 30% each of carbohydrate and protein, no more than $25\%$ fat and at least $5\%$ minerals. Which one of the following combinations of equally mixed ingredients is feasible?

A. O and P B. R and S C. P and S D. Q and R E. O and S

cat2007 data-interpretation tabular-data

## 1.7.130 Tabular Data: CAT 2007 | Question: 48 top

**Answer the following question based on the information given below:**

A health-drink company's R & D department is trying to make various diet formulations, which can be used for certain specific purposes. It is considering a choice of 5 alternative ingredients (O, P, Q, R and S), which can be used in different proportions in the formulations. The table below gives the compositions of these ingredients. The cost per unit of each of these ingredients is O: 150, P: 50, Q: 200, R: 500, S: 100.

| | Composition | | | |
|---|---|---|---|---|
| Ingredient | Carbohydrate% | Protein % | Fat % | Minerals% |

| | | | | |
|---|---|---|---|---|
| O | 50 | 30 | 10 | 10 |
| P | 80 | 20 | 0 | 0 |
| Q | 10 | 30 | 50 | 10 |
| R | 5 | 50 | 40 | 5 |
| S | 45 | 50 | 0 | 5 |

For a recuperating patient, the doctor recommended a diet containing $10\%$ minerals and at least $30\%$ protein. In how many different ways can we prepare this diet by mixing at least two ingredients?

A. One B. Two C. Three D. Four E. None

cat2007 data-interpretation tabular-data

Answer key

## 1.7.131 Tabular Data: CAT 2007 | Question: 49 top

**Answer the following question based on the information given below:**

A health-drink company's R & D department is trying to make various diet formulations, which can be used for certain specific purposes. It is considering a choice of $5$ alternative ingredients $(O, P, Q, R \text{ and } S)$, which can be used in different proportions in the formulations. The table below gives the compositions of these ingredients. The cost per unit of each of these ingredients is O: 150, P: 50, Q: 200, R: 500, S: 100.

| | **Composition** | | | |
|---|---|---|---|---|
| Ingredient | Carbohydrate% | Protein % | Fat % | Minerals% |
| O | 50 | 30 | 10 | 10 |
| P | 80 | 20 | 0 | 0 |
| Q | 10 | 30 | 50 | 10 |
| R | 5 | 50 | 40 | 5 |
| S | 45 | 50 | 0 | 5 |

Which among the following is the formulation having the lowest cost per unit for a diet having $10\%$ fat and at least $30\%$ protein? This diet has to be formed by mixing two ingredients.

A. P and Q B. P and S C. P and R D. Q and S E. R and S

cat2007 data-interpretation tabular-data

## 1.7.132 Tabular Data: CAT 2007 | Question: 50 top

**Answer the following question based on the information given below:**

A health-drink company's R & D department is trying to make various diet formulations, which can be used for certain specific purposes. It is considering a choice of $5$ alternative ingredients $(O, P, Q, R \text{ and } S)$, which can be used in different proportions in the formulations. The table below gives the compositions of these ingredients. The cost per unit of each of these ingredients is O: 150, P: 50, Q: 200, R: 500, S: 100.

| | **Composition** | | | |
|---|---|---|---|---|
| Ingredient | Carbohydrate% | Protein % | Fat % | Minerals% |
| O | 50 | 30 | 10 | 10 |
| P | 80 | 20 | 0 | 0 |
| Q | 10 | 30 | 50 | 10 |
| R | 5 | 50 | 40 | 5 |
| S | 45 | 50 | 0 | 5 |

In what proportion P, Q and S should be mixed to make a diet having at least $60\%$ carbohydrate at the lowest cost per unit?

A. 2 : 1 : 3 B. 4 : 1 : 2 C. 2 : 1 : 4 D. 3 : 1 : 2 E. 4 : 1 : 1

cat2007 data-interpretation tabular-data

Answer key

## 1.7.133 Tabular Data: CAT 2008 | Question: 26 top

**Answer the following question based on the information given below.**

There are $100$ employees in an organization across five departments. The following table gives the department-wise distribution of average age, average basic pay and allowances. The gross pay of an employee is the sum of his/her basic pay

and allowances.

| Department | Number of Employees | Average Age (years) | Average Basic Pay (Rs) | Allowances (% of Basic Pay) |
|---|---|---|---|---|
| HR | 5 | 45 | 5000 | 70 |
| Marketing | 30 | 35 | 6000 | 80 |
| Finance | 20 | 30 | 6500 | 60 |
| Business Development | 35 | 42 | 7500 | 75 |
| Maintenance | 10 | 35 | 5500 | 50 |

There are limited number of employees considered for transfer/promotion across departments. Whenever a person is transferred/promoted from a department of lower average age to a department of higher average age, he/she will get an additional allowance of 10% of basic pay over and above his/her current allowance. There will not be any change in pay structure if a person is transferred/promoted from a department with higher average age to a department with lower average age.

There was a mutual transfer of an employee between Marketing and Finance departments and transfer of one employee from Marketing to HR. As a result the average age of Finance department increased by one year and that of Marketing department remained the same. What is the new average age of HR department?

A. 30
B. 35
C. 40
D. 45
E. cannot be determined

cat2008 data-interpretation tabular-data

Answer key

## 1.7.134 Tabular Data: CAT 2008 | Question: 27 top

**Answer the following question based on the information given below.**

There are 100 employees in an organization across five departments. The following table gives the department-wise distribution of average age, average basic pay and allowances. The gross pay of an employee is the sum of his/her basic pay and allowances.

| Department | Number of Employees | Average Age (years) | Average Basic Pay (Rs) | Allowances (% of Basic Pay) |
|---|---|---|---|---|
| HR | 5 | 45 | 5000 | 70 |
| Marketing | 30 | 35 | 6000 | 80 |
| Finance | 20 | 30 | 6500 | 60 |
| Business Development | 35 | 42 | 7500 | 75 |
| Maintenance | 10 | 35 | 5500 | 50 |

There are limited number of employees considered for transfer/promotion across departments. Whenever a person is transferred/promoted from a department of lower average age to a department of higher average age, he/she will get an additional allowance of 10% of basic pay over and above his/her current allowance. There will not be any change in pay structure if a person is transferred/promoted from a department with higher average age to a department with lower average age.

What is the approximate percentage change in the average gross pay of the HR department due to due to transfer of a 40-year old person with basic pay of Rs. 8000 from the Marketing department?

A. 9%
B. 11%
C. 13%
D. 15%
E. 17%

cat2008 data-interpretation tabular-data

## 1.7.135 Tabular Data: CAT 2008 | Question: 28 top

**Answer the following question based on the information given below.**

There are 100 employees in an organization across five departments. The following table gives the department-wise distribution of average age, average basic pay and allowances. The gross pay of an employee is the sum of his/her basic pay

and allowances.

| Department | Number of Employees | Average Age (years) | Average Basic Pay (Rs) | Allowances (% of Basic Pay) |
|---|---|---|---|---|
| HR | 5 | 45 | 5000 | 70 |
| Marketing | 30 | 35 | 6000 | 80 |
| Finance | 20 | 30 | 6500 | 60 |
| Business Development | 35 | 42 | 7500 | 75 |
| Maintenance | 10 | 35 | 5500 | 50 |

There are limited number of employees considered for transfer/promotion across departments. Whenever a person is transferred/promoted from a department of lower average age to a department of higher average age, he/she will get an additional allowance of 10% of basic pay over and above his/her current allowance. There will not be any change in pay structure if a person is transferred/promoted from a department with higher average age to a department with lower average age.

If two employees (each with a basic pay of Rs. 6000) are transferred from Maintenance department to HR department. and one person (with a basic pay of Rs. 8000) was transferred from Marketing department to HR department, what will be the percentage change in average basic pay of HR department?

A. 10.5% B. 12.5% C. 15% D. 30% E. 40%

cat2010 data-interpretation tabular-data

### 1.7.145 Tabular Data: CAT 2010 | Question: 52 top

What was the difference, if any, between the number of permanent workers employed by M/s Mega Corp Limited on March 1 and the number of permanent workers employed on April 1?

A. 0 B. 50 C. 100 D. 150

cat2010 data-interpretation tabular-data

### 1.7.146 Tabular Data: CAT 2010 | Question: 53 top

What was the total number of units shipped by M/s Mega Corp Limited for the months of January, February and March (approximately)?

A. 40,000 B. 55,000 C. 60,000 D. 70,000

cat2010 data-interpretation tabular-data

### 1.7.147 Tabular Data: CAT 2010 | Question: 54 top

If on May 1, 60% of the permanent workers and 40% of the temporary workers employed by M/s Mega Corp Limited were women, how many of the workers employed by M/s Mega Corp Limited at that time were women?

A. 200 B. 120 C. 410 D. 260

cat2010 data-interpretation tabular-data

### 1.7.148 Tabular Data: CAT 2010 | Question: 58 top

The completion of one cycle of the network results in one bottle ready to be sold in the market . The project involves a total of 800 bottles. What is the average cost of the entire project?

A. Rs 74400 B. Rs 372000 C. Rs 15000 D. Rs 18500

cat2010 data-interpretation tabular-data

### 1.7.149 Tabular Data: CAT 2010 | Question: 59 top

If profit is defined as the difference between the selling price and the average cost, and each bottle is solid for Rs 510, what is the approximate percent profit earned by the firm?

A. 5% B. 10% C. 15% D. 17.5%

cat2010 data-interpretation tabular-data

### 1.7.150 Tabular Data: CAT 2011 | Question: 22 top

Study the following table and answer the questions that follow.

Disbursement of Loans by Various Banks from 1982 to 1986 (In ₹ Crore)

| Banks | 1982 | 1983 | 1984 | 1985 | 1986 |
|---|---|---|---|---|---|
| A | 18 | 23 | 45 | 30 | 70 |
| B | 27 | 33 | 18 | 41 | 37 |
| C | 29 | 29 | 22 | 17 | 11 |
| D | 31 | 16 | 28 | 32 | 43 |
| E | 13 | 19 | 27 | 34 | 42 |
| Total | 118 | 120 | 140 | 154 | 203 |

In which year did the average disbursement of loans record the highest percentage increase over that of the previous year?

A. 1984 B. 1986 C. 1985 D. 1983

cat2011 data-interpretation tabular-data

### 1.7.151 Tabular Data: CAT 2011 | Question: 23 top

Study the following table and answer the questions that follow.

Disbursement of Loans by Various Banks from 1982 to 1986 (In ₹ Crore)

| Banks | 1982 | 1983 | 1984 | 1985 | 1986 |
|---|---|---|---|---|---|
| A | 18 | 23 | 45 | 30 | 70 |
| B | 27 | 33 | 18 | 41 | 37 |
| C | 29 | 29 | 22 | 17 | 11 |
| D | 31 | 16 | 28 | 32 | 43 |
| E | 13 | 19 | 27 | 34 | 42 |
| Total | 118 | 120 | 140 | 154 | 203 |

In which year and for which bank was the percentage contribution to the total value of loans disbursed for that year the lowest?

A. C, 1986 B. B, 1984 C. C, 1985 D. A, 1985

cat2011 data-interpretation tabular-data

### 1.7.152 Tabular Data: CAT 2011 | Question: 24 top

Study the following table and answer the questions that follow.

Disbursement of Loans by Various Banks from 1982 to 1986 (In ₹ Crore)

| Banks | 1982 | 1983 | 1984 | 1985 | 1986 |
|---|---|---|---|---|---|
| A | 18 | 23 | 45 | 30 | 70 |
| B | 27 | 33 | 18 | 41 | 37 |
| C | 29 | 29 | 22 | 17 | 11 |
| D | 31 | 16 | 28 | 32 | 43 |
| E | 13 | 19 | 27 | 34 | 42 |
| Total | 118 | 120 | 140 | 154 | 203 |

For a certain scheme, the qualification is that a bank should have consistently achieved a minimum of $20\%$ of the total disbursement of all banks for each of the last four years. Which of the banks qualify as on the year $1986$?

A. A B. B C. C D. None of these

cat2011 data-interpretation tabular-data

## 1.7.153 Tabular Data: CAT 2014 | Question: 28 top

**Directions for Questions:**

Answer the following questions based on the information given below: The following table shows the break-up of actual costs incurred by a company in last five years (year $2012$ to year $2016$) to produce a particular product:

The production capacity of the company is $2000$ units. The selling price for the year $2016$ was Rs.$125$ per unit. Some costs change almost in direct proportion to the change in volume of production, while others do not follow any obvious pattern of change with respect to the volume of production and hence are considered fixed. Using the information provided for the year $2016$ as the basis for projecting the figures for the year $2017$, answer the following questions:

| | Year 2012 | Year 2013 | Year 2014 | Year 2015 | Year 2016 |
|---|---|---|---|---|---|
| Volume of production and sale | 1000 | 900 | 1100 | 1200 | 1300 |
| Cost (Rs.) | | | | | |
| Input Material | 50,000 | 45,100 | 55,200 | 59, 900 | 60,000 |
| Manpower | 20,000 | 18,000 | 22,100 | 24, 150 | 24,000 |
| Variables | 2,000 | 2,200 | 1,800 | 1,600 | 1,400 |
| Rent | 1,000 | 1,000 | 1,100 | 1,100 | 1,200 |
| Taxes | 400 | 400 | 400 | 400 | 400 |
| Maintenance | 800 | 820 | 780 | 790 | 800 |
| Operating Cost | 30,000 | 27,000 | 33,500 | 36,020 | 36,000 |
| Marketing | 5,750 | 5,800 | 5,800 | 5,750 | 5,800 |

What is the approximate cost per unit in rupees, if the company produces and sells $1400$ units in the year $2017$?

A. 104 B. 107 C. 110 D. 115

cat2014 data-interpretation tabular-data

## 1.7.154 Tabular Data: CAT 2014 | Question: 29 top

**Directions for Questions:**

| Marketing | 5,750 | 5,800 | 5,800 | 5,750 | 5,800 |

What is the minimum number of units that the company needs to produce and sell to avoid any loss?

A. 313 B. 350 C. 384 D. 747

cat2014 data-interpretation tabular-data

## 1.7.155 Tabular Data: CAT 2014 | Question: 30 top

**Directions for Questions:**

Answer the following questions based on the information given below: The following table shows the break-up of actual costs incurred by a company in last five years (year 2012 to year 2016) to produce a particular product:

The production capacity of the company is 2000 units. The selling price for the year 2016 was Rs.125 per unit. Some costs change almost in direct proportion to the change in volume of production, while others do not follow any obvious pattern of change with respect to the volume of production and hence are considered fixed. Using the information provided for the year 2016 as the basis for projecting the figures for the year 2017, answer the following questions:

| | Year 2012 | Year 2013 | Year 2014 | Year 2015 | Year 2016 |
|---|---|---|---|---|---|
| Volume of production and sale | 1000 | 900 | 1100 | 1200 | 1300 |
| Cost (Rs.) | | | | | |
| Input Material | 50,000 | 45,100 | 55,200 | 59,900 | 60,000 |
| Manpower | 20,000 | 18,000 | 22,100 | 24,150 | 24,000 |
| Variables | 2,000 | 2,200 | 1,800 | 1,600 | 1,400 |
| Rent | 1,000 | 1,000 | 1,100 | 1,100 | 1,200 |
| Taxes | 400 | 400 | 400 | 400 | 400 |
| Maintenance | 800 | 820 | 780 | 790 | 800 |
| Operating Cost | 30,000 | 27,000 | 33,500 | 36,020 | 36,000 |
| Marketing | 5,750 | 5,800 | 5,800 | 5,750 | 5,800 |

If the company reduces the price by 5%, it can produce and sell as many units as it desires. How many units the company should produce to maximize its profit?

A. 1400 B. 1600 C. 1800 D. 2000

cat2014 data-interpretation tabular-data

## 1.7.156 Tabular Data: CAT 2014 | Question: 31 top

**Directions for Questions:**

Answer the following questions based on the information given below: The following table shows the break-up of actual costs incurred by a company in last five years (year 2012 to year 2016) to produce a particular product:

The production capacity of the company is 2000 units. The selling price for the year 2016 was Rs.125 per unit. Some costs change almost in direct proportion to the change in volume of production, while others do not follow any obvious pattern of change with respect to the volume of production and hence are considered fixed. Using the information provided for the year 2016 as the basis for projecting the figures for the year 2017, answer the following questions:

| | Year 2012 | Year 2013 | Year 2014 | Year 2015 | Year 2016 |
|---|---|---|---|---|---|
| Volume of production and sale | 1000 | 900 | 1100 | 1200 | 1300 |
| Cost (Rs.) | | | | | |
| Input Material | 50,000 | 45,100 | 55,200 | 59,900 | 60,000 |
| Manpower | 20,000 | 18,000 | 22,100 | 24,150 | 24,000 |
| Variables | 2,000 | 2,200 | 1,800 | 1,600 | 1,400 |
| Rent | 1,000 | 1,000 | 1,100 | 1,100 | 1,200 |
| Taxes | 400 | 400 | 400 | 400 | 400 |
| Maintenance | 800 | 820 | 780 | 790 | 800 |
| Operating Cost | 30,000 | 27,000 | 33,500 | 36,020 | 36,000 |
| Marketing | 5,750 | 5,800 | 5,800 | 5,750 | 5,800 |

Given that the company cannot sell more than 1700 units, and it will have to reduce the price by Rs.5 for all units, if it wants to sell more than 1400 units, what is the maximum profit, in rupees, that the company can earn?

A. 25,400 B. 24,400 C. 31,400 D. 32,900

## 1.7.157 Tabular Data: CAT 2016 | Question: 47 top

Purana and Naya are two brands of kitchen mixer-grinders available in the local market. Purana is an old brand that was introduced in 1990, while Naya was introduced in 1997. For both these brands, 20% of the mixer-grinders bought in a particular year are disposed off as junk exactly two years later. It is known that 10 Purana mixer-grinders were disposed off in 1997. The following figures show the number of Purana and Naya mixer-grinders in operation from 1995 to 2000, as at the end of the year.

| | 1995 | 1996 | 1997 | 1998 | 1999 | 2000 |
|---|---|---|---|---|---|---|
| **Purana** | 120 | 162 | 182 | 222 | 236 | 236 |
| **Naya** | 0 | 0 | 30 | 80 | 124 | 134 |

How many Naya mixer-grinders were disposed off by the end of 2000 _____

cat2016 data-interpretation tabular-data numerical-answer

## 1.7.158 Tabular Data: CAT 2016 | Question: 48 top

Purana and Naya are two brands of kitchen mixer-grinders available in the local market. Purana is an old brand that was introduced in 1990, while Naya was introduced in 1997. For both these brands, 20% of the mixer-grinders bought in a particular year are disposed off as junk exactly two years later. It is known that 10 Purana mixer-grinders were disposed off in

1997. The following figures show the number of Purana and Naya mixer-grinders in operation from 1995 to 2000, as at the end of the year.

### 1.7.161 Tabular Data: CAT 2017 Set-1 | Question: 39 top

A study to look at the early teaming of rural kids was carried out in a number of villages spanning three states, chosen from the North East (NE), the West (W) and the South (S). 50 four-year old kids each were sampled from each of the 150 villages from W and 200 villages from S. It was found that of the 30000 surveyed feds 55% studied in primary schools run by government (G), 37% in private schools (P) while the remaining 8% did not go to School (O).

The kids were surveyed were further divided into two groups based on whether their mother dropped out of school before completing primary education or not. The table below gives the number of kids in different types of schools for mother who dropped-out of school before completing primary education.

| | G | P | O | Total |
|---|---|---|---|---|
| NE | 4200 | 500 | 300 | 5000 |
| W | 4200 | 1900 | 1200 | 7300 |
| S | 5100 | 300 | 300 | 5700 |
| Total | 13500 | 2700 | 1800 | 18000 |

It is also known that:

1. In S, 60% of the surveyed kids were in G. Moreover, in S, all surveyed kids whose mothers had completed primary education were in school.
2. In NE, among the O kids, 50% had mothers who had dropped out before completing primary education
3. The number of kids in G in NE was the same as the number of kids in G in W.

What percentage of kids from S were studying in P?

A. 37% B. 6% C. 79% D. 56%

cat2017-1 data-interpretation tabular-data

### 1.7.162 Tabular Data: CAT 2017 Set-1 | Question: 40 top

A study to look at the early teaming of rural kids was carried out in a number of villages spanning three states, chosen from the North East (NE), the West (W) and the South (S). 50 four-year old kids each were sampled from each of the 150 villages from W and 200 villages from S. It was found that of the 30000 surveyed feds 55% studied in primary schools run by government (G), 37% in private schools (P) while the remaining 8% did not go to School (O).

The kids were surveyed were further divided into two groups based on whether their mother dropped out of school before completing primary education or not. The table below gives the number of kids in different types of schools for mother who dropped-out of school before completing primary education.

| | G | P | O | Total |
|---|---|---|---|---|
| NE | 4200 | 500 | 300 | 5000 |
| W | 4200 | 1900 | 1200 | 7300 |
| S | 5100 | 300 | 300 | 5700 |
| Total | 13500 | 2700 | 1800 | 18000 |

It is also known that:

1. In S, 60% of the surveyed kids were in G. Moreover, in S, all surveyed kids whose mothers had completed primary education were in school.
2. In NE, among the O kids, 50% had mothers who had dropped out before completing primary education
3. The number of kids in G in NE was the same as the number of kids in G in W.

Among the kids in W whose mothers had completed primary education, how many were not in school?

A. 300 B. 1200 C. 1050 D. 1500

cat2017-1 data-interpretation tabular-data

### 1.7.163 Tabular Data: CAT 2017 Set-1 | Question: 41 top

A study to look at the early teaming of rural kids was carried out in a number of villages spanning three states, chosen from the North East (NE), the West (W) and the South (S). 50 four-year old kids each were sampled from each of the 150 villages from W and 200 villages from S. It was found that of the 30000 surveyed feds 55% studied in primary schools run by government (G), 37% in private schools (P) while the remaining 8% did not go to School (O).

The kids were surveyed were further divided into two groups based on whether their mother dropped out of school before completing primary education or not. The table below gives the number of kids in different types of schools for mother who dropped-out of school before completing primary education.

| | G | P | O | Total |
|---|---|---|---|---|
| NE | 4200 | 500 | 300 | 5000 |
| W | 4200 | 1900 | 1200 | 7300 |
| S | 5100 | 300 | 300 | 5700 |
| Total | 13500 | 2700 | 1800 | 18000 |

It is also known that:

1. In S, 60% of the surveyed kids were in G. Moreover, in S, all surveyed kids whose mothers had completed primary education were in school.
2. In NE, among the O kids, 50% had mothers who had dropped out before completing primary education
3. The number of kids in G in NE was the same as the number of kids in G in W.

In a follow up survey of the same kids two years later, it was found that all the kids were now in school. Of the kids who were not in school earlier, In one region, 25% were in G now, whereas the rest were enrolled in P; in the second region, all such kids were in G now; while the third region, 50% of such kids had now joined while the rest had joined P. As a result in all three regions put together, 50% of the kids who were earlier out of school had joined G. It was also seen that no surveyed kid had changed schools.

What number of the surveyed kids now were in G in W?

A. 6000 B. 5250 C. 6750 D. 6300

cat2017-1 data-interpretation tabular-data

## 1.7.164 Tabular Data: CAT 2017 Set-1 | Question: 42 top

A study to look at the early teaming of rural kids was carried out in a number of villages spanning three states, chosen from the North East (NE), the West (W) and the South (S). 50 four-year old kids each were sampled from each of the 150 villages from W and 200 villages from S. It was found that of the 30000 surveyed feds 55% studied in primary schools run by government (G), 37% in private schools (P) while the remaining 8% did not go to School (O).

The kids were surveyed were further divided into two groups based on whether their mother dropped out of school before completing primary education or not. The table below gives the number of kids in different types of schools for mother who dropped-out of school before completing primary education.

| | G | P | O | Total |
|---|---|---|---|---|
| NE | 4200 | 500 | 300 | 5000 |
| W | 4200 | 1900 | 1200 | 7300 |
| S | 5100 | 300 | 300 | 5700 |

## 1.7.165 Tabular Data: CAT 2018 Set-2 | Question: 55 top

An agency entrusted to accredit colleges looks at four parameters: faculty quality $(\mathrm{F})$, reputation $(\mathrm{R})$, placement quality $(\mathrm{P})$, and infrastructure $(\mathrm{I})$. The four parameters are used to arrive at an overall score, which the agency uses to give an accreditation to the colleges. In each parameter, there are five possible letter grades given, each carrying certain points: $\mathrm{A}$ $(50$ points), $\mathrm{B}$ $(40$ points), $\mathrm{C}$ $(30$ points), $\mathrm{D}$ $(20$ points), and $\mathrm{F}$ $(0$ points). The overall score for a college is the weighted sum of the points scored in the four parameters. The weights of the parameters are $0.1, 0.2, 0.3$ and $0.4$ in some order, but the order is not disclosed. Accreditation is awarded based on the following scheme:

| Range | Accreditation |
|---|---|
| Overall score $\geq 45$ | AAA |
| $35 \leq$ Overall score $<45$ | AA |
| $25 \leq$ Overall score $<35$ | A |
| $15 \leq$ Overall score $<25$ | B |
| Overall score $<15$ | Junk |

Eight colleges apply for accreditation, and receive the following grades in the four parameters $(\mathrm{F}, \mathrm{R}, \mathrm{P}, \text{and } \mathrm{I})$ :

| | F | R | P | I |
|---|---|---|---|---|
| A-one | A | A | A | B |
| Best Ed | B | C | D | D |
| Cosmopolitan | B | D | D | C |
| Dominance | D | D | B | C |
| Education Aid | A | A | B | A |
| Fancy | A | A | B | B |
| Global | C | F | D | D |
| High Q | C | D | D | B |

It is further known that in terms of overall scores:

1. High Q is better than Best Ed;
2. Best Ed is better than Cosmopolitan; and
3. Education Aid is better than A-one.

What is the weight of the faculty quality parameter?

A. 0.3 B. 0.2 C. 0.4 D. 0.1

cat2018-2 data-interpretation tabular-data

## 1.7.166 Tabular Data: CAT 2018 Set-2 | Question: 56 top

An agency entrusted to accredit colleges looks at four parameters: faculty quality $(\mathrm{F})$, reputation $(\mathrm{R})$, placement quality $(\mathrm{P})$, and infrastructure $(\mathrm{I})$. The four parameters are used to arrive at an overall score, which the agency uses to give an accreditation to the colleges. In each parameter, there are five possible letter grades given, each carrying certain points: $\mathrm{A}$ $(50$ points), $\mathrm{B}$ $(40$ points), $\mathrm{C}$ $(30$ points), $\mathrm{D}$ $(20$ points), and $\mathrm{F}$ $(0$ points). Two clocks are set right at 10 a.m. One gains 20 seconds and the other loses 40 seconds in 24 hours. What will be the true time when the first clock indicates 4 p.m. on the following day?

Answer key

### 2.0.6 syllogism NET 2018 top

If the proposition 'domestic animals are hardly ferocious' is taken to be false, which of the following proposition/propositions can be claimed to be certainly true ? Select the correct code :
Propositions :

a. All domestic animals are ferocious.
b. Most of the domestic animals are ferocious.
c. No domestic animal is ferocious.
d. Some domestic animals are non-ferocious.

Code :

1. (a) and (b)
2. (a) only
3. (c) and (d)
4. (b) only

### 2.0.7 The Egg Problem top

There were 2 friends who started buying 14 eggs at Rs.3 per egg daily from september. Both will eat 4 boiled eggs daily and store the remaining eggs keeping in mind the price hike during winter. One odd day due to some emergency one of the friend had to go out. He returned after 5 days and during these days no extra egg was bought, but his friend continued the routine of consuming 4 boiled eggs. Both of them were bad at maths and had different reasoning for the settlement.

Friend A : While you were not here I ate 20 eggs from the store. For these 20 stocked eggs you contributed Rs.30 as your share. So I will give you Rs.30

Friend B : You ate 20 extra eggs so I am taking 20 eggs from the store now or give me Rs.60

i. Friend A is correct
ii. Friend B is correct
iii. Both are correct
iv. None is correct

Answer key

### 2.0.8 CAT 2014 | Question: 9 top

ONWARD, 5; REGRESS, 4. Which of the following statements about the above instructions is true?

a. $n2 = n1 + 4$ Provided $1 < n1 < 7$
b. $n2 = n1$ provided $M < 6$
c. $n2 = n1 + 1$ provided $M - n1 > 5$
d. $n2 - n1 < 0$ provided $M > 0$

### 2.0.10 sania was given some money by her father on her birthday top

sania was given some money by her father on her birthday .she spent all of it in 5 shops . in each shop she spent one rupee more than half of what she had when she came in . how much did she get from her father

A. 30 B. 120 C. 46 D. 62

Answer key

### 2.0.11 Strong or weak Argument top

Statement : Should hand baggage on all international flights be permanently banned

Arguments :

1. No, it causes a lot of inconvenience since items of minimum requirement need to be carried during long haul flights
2. Yes,it is necessary to ensure security of passengers on board

Answer key

### 2.0.12 Strong Arguments top

Statement : Some of people say that use of "The Geeta" in court during judgments should not be allowed

Argument :

1. They feel The Geeta is being insulted
2. Some people may swear falsely with The Geeta

Answer key

## 2.0.13 Statement-argument top

Statement: Should Foreign Films be banned in India.

Arguments:

1. Yes, They depict an alien culture which adversely affect our value
2. No, Foreign Films are of a high artistic standard

a. 1 is strong
b. 2 is strong
c. either 1 or 2 is strong
d. neither 1 nor 2 is strong
e. both are strong

Please help me how to solve these kind of question

verbal-ability

Answer key

## 2.0.14 Strong Arguments top

Statement : Should Their be a ban on product advertising ?

Arguments :

1. No, it is an age of advertising. Unless your advertisement is better than your other competitors. the product will not be sold
2. Yes, the money spent on advertising is very huge and it inflates the cost of the product

As per me Argument 2 is strong but not 1

## 2.0.15 statements-conclusions top

Statements :1. Some soldiers are famous.
2. Some soldiers are intelligent.
Conclusions:1.Some soldiers are either famous or intelligent.
2.Some soldiers are neither famous nor intelligent.

Answer key

## 2.0.16 statement-conclusion top

1. **Statements:** In a one day cricket match, the total runs made by a team were 200. Out of these 160 runs were made by spinners.
**Conclusions:**
I. 80% of the team consists of spinners.
II. The opening batsmen were spinners.
A. Only conclusion I follows
B. Only conclusion II follows
C. Either I or II follows
D. Neither I nor II follows
E. Both I and II follow

**Statements:** In a one day cricket match, the total run made by a team were 200. Out of these 160 runs were made by spinners.

### 2.1.2 Algebra: CAT 2011 | Question: 52 top

Consider the following operators defined below

$x@y$: gives the positive difference of $x$ and $y$.

$x\$y$: gives the sum of squares of $x$ and $y$.

$x£y$: gives the positive difference of the squares of $x$ and $y$.

$x\&y$:gives the product of $x$ and $y$.

Also, $x, y \in R$ and $x \neq y$. The other standard algebraic operations are unchanged.

Given that $x@y = x - y$, then find $(x\$y) + (x£y)$.

A. $2x^2$
B. $2y^2$
C. $2(x^2 + y^2)$
D. Cannot be determined

cat2011 logical-reasoning algebra

### 2.1.3 Algebra: CAT 2011 | Question: 53 top

Consider the following operators defined below

$x@y$: gives the positive difference of $x$ and $y$.

$x\$y$: gives the sum of squares of $x$ and $y$.

$x£y$: gives the positive difference of the squares of $x$ and $y$.

$x\&y$:gives the product of $x$ and $y$.

Also, $x, y \in R$ and $x \neq y$. The other standard algebraic operations are unchanged.

The expression $[(x£y) \div (x@y)]^2 - 2(x£y)$ will be equal to

A. $x£y$
B. $x\$y$
C. $(x£y)(x@y)$
D. Cannot be determined

## 2.7 Code Language (15) top

### 2.7.1 Code Language: CAT 2018 Set-2 | Question: 59 top

According to a coding scheme the sentence Peacock is designated as the national bird of India is coded as 5688999 35 1135556678 56 458 13666689 1334 79 13366

This coding scheme has the following rules:

1. The scheme is case-insensitive (does not distinguish between upper case and lower case letters).
2. Each letter has a unique code which is a single digit from among $1, 2, 3, \ldots, 9$.
3. The digit 9 codes two letters, and every other digit codes there letters.
4. The code for a word is constructed by arranging the digits corresponding to its letters in a non decreasing sequence.

Answer these questions on the basis of this information.

What best can be concluded about the code for the letter L?

A. 1 B. 1 or 8 C. 6 D. 8

cat2018-2 logical-reasoning code-language

### 2.7.2 Code Language: CAT 2018 Set-2 | Question: 60 top

What is the speed of the car?

A. The speed of the car is 10 more than that of a motorcycle.

B. The motorcycle takes 2 hours more than the car to cover 100 kms.

A. If the question can be answered by using one of the statements alone, but cannot be answered by using the other statement alone.
B. If the question can be answered by using either statement alone.
C. If the question can be answered by using both statements together, but cannot be answered by using either statement alone.
D. If the question cannot be answered even by using both the statements together.

cat1997 logical-reasoning data-sufficiency

### 2.10.7 Data Sufficiency: CAT 1997 | Question: 152 top

Data Sufficiency.

Mark (a) If the question can be answered by using one of the statements alone, but cannot be answered by using the other statement alone.

Mark (b) If the question can be answered by using either statement alone.

Mark (c) If the question can be answered by using both statements together, but cannot be answered by using either statement alone.

Mark (d) If the question cannot be answered even by using both the statements together.

What is the ratio of the volume of the given right circular cone to the one obtained from it?

A. The smaller cone is obtained by passing a plane parallel to the base and dividing the original height in the ratio $1:2$.

B. The height and the base of the new cone are one-third those of the original cone.

A. If the question can be answered by using one of the statements alone, but cannot be answered by using the other statement alone.
B. If the question can be answered by using either statement alone.
C. If the question can be answered by using both statements together, but cannot be answered by using either statement alone.
D. If the question cannot be answered even by using both the statements together.

cat1997 logical-reasoning data-sufficiency

### 2.10.8 Data Sufficiency: CAT 1997 | Question: 153 top

Data Sufficiency.

Mark (a) If the question can be answered by using one of the statements alone, but cannot be answered by using the other statement alone.

Mark (b) If the question can be answered by using either statement alone.

Mark (c) If the question can be answered by using both statements together, but cannot be answered by using either statement alone.

Mark (d) If the question cannot be answered even by using both the statements together.

What is the area bounded by the two lines and the coordinate axes in the first quadrant?

A. The lines intersect at a point which also lies on the lines $3x - 4y = 1$ and $7x - 8y = 5$

B. The lines are perpendicular, and once of them intersects the y-axis at an intercept of $4$.

A. If the question can be answered by using one of the statements alone, but cannot be answered by using the other statement alone.
B. If the question can be answered by using either statement alone.
C. If the question can be answered by using both statements together, but cannot be answered by using either statement alone.
D. If the question cannot be answered even by using both the statements together.

cat1997 logical-reasoning data-sufficiency

### 2.10.9 Data Sufficiency: CAT 1997 | Question: 154 top

Data Sufficiency.

Mark (a) If the question can be answered by using one of the statements alone, but cannot be answered by using the other statement alone.

Mark (b) If the question can be answered by using either statement alone.

Mark (c) If the question can be answered by using both statements together, but cannot be answered by using either statement alone.

Mark (d) If the question cannot be answered even by using both the statements together.

What is the cost price of the chair?

A. The chair and the table are sold, respectively, at a profit of $5\%$ and $20\%$.

B. If the cost price of the chair is increased by $10\%$ and that of the table is increased by $20\%$, the profit reduces by Rs. $20$.

A. If the question can be answered by using one of the statements alone, but cannot be answered by using the other statement alone.
B. If the question can be answered by using either statement alone.
C. If the question can be answered by using both statements together, but cannot be answered by using either statement alone.
D. If the question cannot be answered even by using both the statements together.

cat1997 logical-reasoning data-sufficiency

### 2.10.10 Data Sufficiency: CAT 1997 | Question: 155 top

Data Sufficiency.

Mark (a) If the question can be answered by using one of the statements alone, but cannot be answered by using the other statement alone.

Mark (b) If the question can be answered by using either statement alone.

Mark (c) If the question can be answered by using both statements together, but cannot be answered by using either statement alone.

Mark (d) If the question cannot be answered even by using both the statements together.

After what time will the two persons, $X$ and $Y$ meet while moving around the circular track? Both of them start from the same point and at the same time.

A. $X$ moves at a constant speed of 5 m/s, while $Y$ starts at a speed $2$ m/s and increases his speed by $0.5$ m/s at the end of every second thereafter.

B. $Y$ can complete one entire lap in exactly $10$ seconds.

A. If the question can be answered by using one of the statements alone, but cannot be answered by using the other statement alone.
B. If the question can be answered by using either statement alone.
C. If the question can be answered by using both statements together, but cannot be answered by using either statement alone.
D. If the question cannot be answered even by using both the statements together.

cat1997 logical-reasoning data-sufficiency

## 2.11 Decision Making (10) top

### 2.11.1 Decision Making: CAT 1996 | Question: 176 top

In each question, you are given certain data followed by two statements. For answering the questions:

Mark a, if both the statements together are insufficient to answer the question.

Mark b, if any one of the two statements is sufficient to answer the question.

Mark c, if each statement alone is sufficient to answer the question.

Mark d, if both the statements together are sufficient to answer the question, but neither statement alone is sufficient.

What is the Cost Price of the article?

1. After selling the article, a loss of $25\%$ on Cost Price incurred.

2. The Selling Price is three-fourths of the Cost Price.

A. if both the statements together are insufficient to answer the question.
B. if any one of the two statements is sufficient to answer the question.
C. if each statement alone is sufficient to answer the question.
D. if both the statements together are sufficient to answer the question, but neither statement alone is sufficient.

cat1996 logical-reasoning decision-making

Answer key

## 2.11.2 Decision Making: CAT 1996 | Question: 177 top

In each question, you are given certain data followed by two statements. For answering the questions:

Mark a, if both the statements together are insufficient to answer the question.

Mark b, if any one of the two statements is sufficient to answer the question.

Mark c, if each statement alone is sufficient to answer the question.

Mark d, if both the statements together are sufficient to answer the question, but neither statement alone is sufficient.

If a, b, c are integers, is $(a - b + c) > (a + b - c)$?

1. b is negative

2. c is positive.

A. if both the statements together are insufficient to answer the question.
B. if any one of the two statements is sufficient to answer the question.
C. if each statement alone is sufficient to answer the question.
D. if both the statements together are sufficient to answer the question, but neither statement alone is sufficient.

cat1996 logical-reasoning decision-making

Answer key

## 2.11.3 Decision Making: CAT 1996 | Question: 178 top

In each question, you are given certain data followed by two statements. For answering the questions:

Mark a, if both the statements together are insufficient to answer the question.

Mark b, if any one of the two statements is sufficient to answer the question.

Mark c, if each statement alone is sufficient to answer the question.

Mark d, if both the statements together are sufficient to answer the question, but neither statement alone is sufficient.

What is the Selling Price of the article?

1. The profit on Sales is $20\%$.

2. The profit on each unit is $25\%$ and the Cost Price is Rs. $250$.

A. if both the statements together are insufficient to answer the question.
B. if any one of the two statements is sufficient to answer the question.
C. if each statement alone is sufficient to answer the question.
D. if both the statements together are sufficient to answer the question, but neither statement alone is sufficient.

cat1996 logical-reasoning decision-making

Answer key

## 2.11.4 Decision Making: CAT 1996 | Question: 179 top

In each question, you are given certain data followed by two statements. For answering the questions:

Mark a, if both the statements together are insufficient to answer the question.

Mark b, if any one of the two statements is sufficient to answer the question.

Mark c, if each statement alone is sufficient to answer the question.

Mark d, if both the statements together are sufficient to answer the question, but neither statement alone is sufficient.

A tractor travelled a distance of $5$ m. What is the radius of the rear wheel?

1. The front wheel rotates “N” times more than the rear wheel over this distance.

2. The circumference of the rear wheel is “t” times that of the front wheel.

A. if both the statements together are insufficient to answer the question.
B. if any one of the two statements is sufficient to answer the question.
C. if each statement alone is sufficient to answer the question.
D. if both the statements together are sufficient to answer the question, but neither statement alone is sufficient.

cat1996 logical-reasoning decision-making

Answer key

## 2.11.5 Decision Making: CAT 1996 | Question: 180 top

In each question, you are given certain data followed by two statements. For answering the questions:

Mark a, if both the statements together are insufficient to answer the question.

Mark b, if any one of the two statements is sufficient to answer the question.

Mark c, if each statement alone is sufficient to answer the question.

Mark d, if both the statements together are sufficient to answer the question, but neither statement alone is sufficient.

What is the ratio of the two liquids A and B in the mixture finally, if these two liquids kept in three vessels are mixed together? (The containers are of equal volume)

1. The ratio of liquid A to liquid B in the first and second vessel is, respectively, $3:5, 2:3$.

2. The ratio liquid A to liquid B in vessel 3 is $4:3$.

A. if both the statements together are insufficient to answer the question.
B. if any one of the two statements is sufficient to answer the question.
C. if each statement alone is sufficient to answer the question.
D. if both the statements together are sufficient to answer the question, but neither statement alone is sufficient.

cat1996 logical-reasoning decision-making

Answer key

## 2.11.6 Decision Making: CAT 1996 | Question: 181 top

In each question, you are given certain data followed by two statements. For answering the questions:

Mark a, if both the statements together are insufficient to answer the question.

Mark b, if any one of the two statements is sufficient to answer the question.

Mark c, if each statement alone is sufficient to answer the question.

Mark d, if both the statements together are sufficient to answer the question, but neither statement alone is sufficient.

If $\alpha, \beta$ are the roots of the equation $(ax^2 + bx + c = 0)$, then what is the value of $(\alpha^2 + \beta^2)$?

1. $\alpha + \beta = -(b/a)$

2. $2\alpha\beta = (c/a)$

A. if both the statements together are insufficient to answer the question.
B. if any one of the two statements is sufficient to answer the question.
C. if each statement alone is sufficient to answer the question.
D. if both the statements together are sufficient to answer the question, but neither statement alone is sufficient.

cat1996 logical-reasoning decision-making

Answer key

## 2.11.7 Decision Making: CAT 1996 | Question: 182 top

In each question, you are given certain data followed by two statements. For answering the questions:

Mark a, if both the statements together are insufficient to answer the question.

Mark b, if any one of the two statements is sufficient to answer the question.

Mark c, if each statement alone is sufficient to answer the question.

Mark d, if both the statements together are sufficient to answer the question, but neither statement alone is sufficient.

What is the number of type 2 widgets produced, if the total number of widgets produced is $20,000$?

1. If the production of type- 1 widgets increases by $10\%$ and that of type-2 decreases by $6\%$, the total production remains the same.

2. The ratio in which type- 1 and type- 2 widgets are produced is $2:1$.

cat1996 logical-reasoning decision-making

Answer key

### 2.11.8 Decision Making: CAT 1996 | Question: 183 top

How old is Sachin in $1997$?

1. Sachin is $11$ years younger than Anil whose age will be prime number in $1998$.
2. Anil's age was a prime number in $1996$.

A. if both the statements together are insufficient to answer the question.
B. if any one of the two statements is sufficient to answer the question.
C. if each statement alone is sufficient to answer the question.
D. if both the statements together are sufficient to answer the question, but neither statement alone is sufficient.

cat1996 logical-reasoning decision-making

Answer key

### 2.11.9 Decision Making: CAT 1996 | Question: 184 top

What is the total worth of X's assets?

1. Compound interest at $10\%$ on his assets, followed by a tax of $4\%$ on the interest, fetches him $\text{Rs.}15000$ this year.
2. The interest is compounded once every four months.

A. if both the statements together are insufficient to answer the question.
B. if any one of the two statements is sufficient to answer the question.
C. if each statement alone is sufficient to answer the question.
D. if both the statements together are sufficient to answer the question, but neither statement alone is sufficient.

cat1996 logical-reasoning decision-making

Answer key

### 2.11.10 Decision Making: CAT 1996 | Question: 185 top

How many different triangles can be formed?

1. There are $16$ coplanar, straight lines in all.
2. No two lines are parallel.

A. if both the statements together are insufficient to answer the question.
B. if any one of the two statements is sufficient to answer the question.
C. if each statement alone is sufficient to answer the question.
D. if both the statements together are sufficient to answer the question, but neither statement alone is sufficient.

cat1996 logical-reasoning decision-making

Answer key

## 2.12 Direction Sense (3) top

### 2.12.1 Direction Sense: CAT 2011 | Question: 18 top

$A$ is standing $5$ m East and $4$ m North of a point $P$ while $B$ is standing $15$ m East and $24$ m North of $P$. $A$ walks at a speed of $1.4$ m/s while $B$ walks at a speed of $2.1$ m/s.

If $A$ and $B$ simultaneously start walking towards each other and finally meet at a point $Q$, then find the distance $PQ$.

A. $13$ m B. $12\sqrt{3}$ m C. $15$ m D. $13\sqrt{2}$ m

cat2011 logical-reasoning direction-sense

### 2.12.2 Direction Sense: CAT 2011 | Question: 19 top

A is standing 5 m East and 4 m North of a point P while B is standing 15 m East and 24 m North of P. A walks at a speed of 1.4 m/s while B walks at a speed of 2.1 m/s.

If A and B simultaneously start walking East and South respectively, then which of the following is true of the distance of closest approach '$d_1$' between them?

A. $d_1 > 5$ m
B. $d_1 < 5$ m
C. $d_1 = 5$ m
D. Cannot be determined

cat2011 logical-reasoning direction-sense

### 2.12.3 Direction Sense: CAT 2014 | Question: 36 top

ABC forms an equilateral triangle in which B is 2 km from A. A person starts walking from B in a direction parallel to AC and stops when he reaches a point D directly east of C. He, then, reverses direction and walks till he reaches a point E directly south of C. Then D is

a. 3 km east and 1 km north of A
b. 3 km east and 3 km north of A
c. 3 km east and 1 km south of A
d. 3 km west and 3 km north of A

cat2014 logical-reasoning direction-sense

## 2.13 Fact Judgemeant Inference (10) top

### 2.13.1 Fact Judgemeant Inference: CAT 1994 | Question: 31 top

F: Fact: If it relates to a known matter of direct observation, or an existing reality or something known to be true,

J: Judgment: If it is an opinion or estimate or anticipation of common sense or intention,

I: Inference: If it is a logical conclusion or deduction about something, based on the knowledge of facts

From the alternatives, choose the one which correctly classifies the four sentences as a

A. If India has embarked on the liberalisation route, she cannot afford to go back.

B. Under these circumstances, being an active supporter of WTO policies will be a good idea.

C. The WTO is a truly global organisation aiming at freer trade.

D. Many member countries have already drafted plans to simplify tariff structures.

A. FJFI B. IFJF C. IJFF D. IFIF

cat1994 logical-reasoning fact-judgemeant-inference

### 2.13.2 Fact Judgemeant Inference: CAT 1994 | Question: 32 top

F: Fact: If it relates to a known matter of direct observation, or an existing reality or something known to be true,

J: Judgment: If it is an opinion or estimate or anticipation of common sense or intention,

I: Inference: If it is a logical conclusion or deduction about something, based on the knowledge of facts

From the alternatives, choose the one which correctly classifies the four sentences as a

A. The Minister definitely took the wrong step.

B. Under the circumstances, he had many other alternatives.

C. The Prime Minister is embarrassed due to the Minister's decision

D. If he has put the government in jeopardy, the Minister must resign.

A. JFFI B. IFJI C. FFJI D. IFIJ

cat1994 logical-reasoning fact-judgemeant-inference

### 2.13.3 Fact Judgemeant Inference: CAT 1994 | Question: 33 top

F: Fact: If it relates to a known matter of direct observation, or an existing reality or something known to be true,

J: Judgment: If it is an opinion or estimate or anticipation of common sense or intention,

I: Inference: If it is a logical conclusion or deduction about something, based on the knowledge of facts.

From the alternatives, choose the one which correctly classifies the four sentences as a

A. The ideal solution will be to advertise aggressively.

B. One brand is already popular amongst the youth.

C. Reducing prices will mean trouble as our revenues are already dwindling.
D. The correct solution will be to consolidate by aggressive marketing.

A. JFIJ B. FJJI C. IJFF D. JJIF

cat1994 logical-reasoning fact-judgemeant-inference

### 2.13.4 Fact Judgemeant Inference: CAT 1994 | Question: 34 top

F: Fact: If it relates to a known matter of direct observation, or an existing reality or something known to be true,
J: Judgment: If it is an opinion or estimate or anticipation of common sense or intention,
I: Inference: If it is a logical conclusion or deduction about something, based on the knowledge of facts
From the alternatives, choose the one which correctly classifies the four sentences as a
A. If democracy is to survive, the people must develop a sense of consumerism.
B. Consumerism has helped improve the quality of goods in certain countries.
C. The protected environment in our country is helping local manufacturers.
D. The quality of goods suffers if the manufacturers take undue advantage of this.

A. IJFJ B. JFJI C. IJJF D. IFJJ

cat1994 logical-reasoning fact-judgemeant-inference

### 2.13.5 Fact Judgemeant Inference: CAT 1994 | Question: 35 top

F: Fact: If it relates to a known matter of direct observation, or an existing reality or something known to be true,
J: Judgment: If it is an opinion or estimate or anticipation of common sense or intention,
I: Inference: If it is a logical conclusion or deduction about something, based on the knowledge of facts.
From the alternatives, choose the one which correctly classifies the four sentences as a
A. Unless the banks agree to a deferment of the interest, we cannot show profits this year.
B. This would not have happened had we adopted a stricter credit scheme.
C. The revenues so far cover only the cost and salaries.
D. Let us learn a lesson: we cannot make profits without complete control over credit.

A. IIJF B. IJFI C. FJIF D. FJFI

cat1994 logical-reasoning fact-judgemeant-inference

### 2.13.6 Fact Judgemeant Inference: CAT 1994 | Question: 36 top

F: Fact: If it relates to a known matter of direct observation, or an existing reality or something known to be true,
J: Judgment: If it is an opinion or estimate or anticipation of common sense or intention,
I: Inference: If it is a logical conclusion or deduction about something, based on the knowledge of facts
From the alternatives, choose the one which correctly classifies the four sentences as a
A. Qualities cannot be injected into one's personality.
B. They are completely dependent on the genetic configuration that one inherits.
C. Hence changing our inherent traits is impossible as the genes are unalterable
D. The least one can do is to try and subdue the "bad qualities".

A. FIJI B. JFFI C. JFIJ D. JIFI

cat1994 logical-reasoning fact-judgemeant-inference

### 2.13.7 Fact Judgemeant Inference: CAT 1994 | Question: 37 top

F: Fact: If it relates to a known matter of direct observation, or an existing reality or something known to be true,
J: Judgment: If it is an opinion or estimate or anticipation of common sense or intention,
I: Inference: If it is a logical conclusion or deduction about something, based on the knowledge of facts.
From the alternatives, choose the one which correctly classifies the four sentences as a
A. Everything is purposeless.

B. Nothing before and after the existence of the universe is known with certainty.

C. Man is a part of the purposeless universe, hence man is also purposeless.

D. There is only one way of adding purpose to this universe: Union with Him.

A. JFIJ B. FJJI C. FFI D. IJFJ

cat1994 logical-reasoning fact-judgemeant-inference

### 2.13.8 Fact Judgemeant Inference: CAT 1994 | Question: 38 top

F: Fact: If it relates to a known matter of direct observation, or an existing reality or something known to be true,

J: Judgment: If it is an opinion or estimate or anticipation of common sense or intention,

I: Inference: If it is a logical conclusion or deduction about something, based on the knowledge of facts.

From the alternatives, choose the one which correctly classifies the four sentences as a

A. Everyday social life is impossible without interpersonal relationships.

B. The root of many misunderstandings has been cited in poor relations among individuals.

C. Assuming the above to the true, social life will be much better if people understand the importance of good interpersonal relations.

D. A study reveals that interpersonal relations and hence life in general can be improved with a little effort on the art of individuals.

A. FJIJ B. JFIF C. FIFJ D. IFFJ

cat1994 logical-reasoning fact-judgemeant-inference

### 2.13.9 Fact Judgemeant Inference: CAT 1994 | Question: 39 top

F: Fact: If it relates to a known matter of direct observation, or an existing reality or something known to be true,

J: Judgment: If it is an opinion or estimate or anticipation of common sense or intention,

I: Inference: If it is a logical conclusion or deduction about something, based on the knowledge of facts.

From the alternatives, choose the one which correctly classifies the four sentences as a

A. The prices of electronic goods are falling.

B. Since we have substantial reductions in import duties, this is obvious.

C. The trend is bound to continue in the near future.

D. But the turnover of the electronic industry is still rising, because consumers are increasing at a rapid rate.

A. IFJF B. FJII C. FIJF D. JIFF

cat1994 logical-reasoning fact-judgemeant-inference

Answer key

### 2.13.10 Fact Judgemeant Inference: CAT 1994 | Question: 40 top

F: Fact: If it relates to a known matter of direct observation, or an existing reality or something known to be true,

J: Judgment: If it is an opinion or estimate or anticipation of common sense or intention,

I: Inference: If it is a logical conclusion or deduction about something, based on the knowledge of facts

From the alternatives, choose the one which correctly classifies the four sentences as a

A. In the past, it appears, wealth distribution, and not wealth creation has dominated economic policy.

B. Clearly, the government has not bothered to eradicate poverty.

C. Today's liberalisation is far from the hitherto Nehruvian socialism.

D. Results are evident in the form of a boom in the manufacturing sector output and turnover of all industries.

A. FJIF B. FIFJ C. IJIF D. JIFF

cat1994 logical-reasoning fact-judgemeant-inference

Answer key

## 2.14 Family Relationships (1) top

### 2.14.1 Family Relationships: CAT 2003 | Question: 1-89 top

**Choose 1 if the question can be answered by one of the statements alone but not by other.**

**Choose 2 if the question can be answered by using either statement alone.**

**Choose 3 if the question can be answered by using both the statements together but cannot be answered by using either statement alone.**

**Choose 4 if the question cannot be answered even by using both the statements A and B.**

F and M are father and mother of S, respectively. S has four uncles and three aunts. F has two siblings. The siblings of F and M are unmarried. How many brothers does M have?

A. F has two brothers.
B. M has five siblings.

cat2003-1 logical-reasoning family-relationships

## 2.15 Fill The Blank (4) top

### 2.15.1 Fill The Blank: CAT 2008 | Question: 51 top

**Direction for below question:**

The following question has a sentence with two blanks. Given below each question are five pairs of words. Choose the pair that best completes the sentence.

The genocides in Bosnia and Rwanda, apart from being mis-described in the most sinister and _____ manner as 'ethnic cleansing', were also blamed, in further hand-washing rhetoric, on something dark and interior to _____ and perpetrators alike.

A. innovative; communicator
B. enchanting; leaders
C. disingenuous; victims
D. exigent; exploiters
E. tragic; sufferers

cat2008 verbal-ability appropriate-word fill-the-blank

### 2.15.2 Fill The Blank: CAT 2008 | Question: 52 top

**Direction for below question:**

The following question has a sentence with two blanks. Given below each question are five pairs of words. Choose the pair that best completes the sentence.

As navigators, calendar makers and other _____ of the night sky accumulated evidence to the contrary, ancient, astronomers were forced to ____ that certain bodies might move in circles about points, which in turn moved in circles about the earth.

A. scrutinizers; believe
B. observers; agree
C. scrutinizers; suggest
D. observers; concede
E. students; conclude

cat2008 verbal-ability appropriate-word fill-the-blank

### 2.15.3 Fill The Blank: CAT 2008 | Question: 53 top

**Direction for below question:**

The following question has a sentence with two blanks. Given below each question are five pairs of words. Choose the pair that best completes the sentence.

Every human being, after the first few days of his life, is a products of two factors: on the one hand, there is his _____ endowment; and on the other hand, there is the effect of environment, including _____

A. constitutional; weather
B. congenital; education
C. personal; climate
D. economic; learning
E. genetic; pedagogy

cat2008 verbal-ability appropriate-word fill-the-blank

Answer key

### 2.15.4 Fill The Blank: CAT 2008 | Question: 54 top

**Direction for below question:**

The following question has a sentence with two blanks. Given below each question are five pairs of words. Choose the pair that

best completes the sentence.

Exhaustion of natural resource, destruction of individual initiative by governments, control over men's minds by central _____ of education and propaganda are some of the major evils which appear to be on the increase as a result of the impact of science upon minds suited by _____ to an earlier kind of world.

A. tenets; fixation
B. aspects; inhibitions
C. institutions; inhibitions
D. organs; tradition
E. departments; repulsion

cat2008 verbal-ability appropriate-word fill-the-blank

## 2.16 Functions (2) top

### 2.16.1 Functions: CAT 1999 | Question: 100 top

**Answer the question based on the information given below:**
Let x and y be real numbers and let

$f(x,y) = |x+y|, F(f(x,y)) = -f(x,y)$ and $G(f(x,y)) = -F(f(x,y))$

Which of the following expressions yields $x^2$ as a result?

A. $F(f(x,-x)).G(f(x,-x))$
B. $F(f(x,x)).G(f(x,x)).4$
C. $-F(f(x,x)).G(f(x,-x))$ $\log_2 16$
D. $f(x,x).f(x,x)$

cat1999 logical-reasoning functions

Answer key

### 2.16.2 Functions: CAT 1999 | Question: 98 top

**Answer the question based on the information given below:**

Let x and y be real numbers and let

$f(x,y) = |x+y|, F(f(x,y)) = -f(x,y)$ and $G(f(x,y)) = -F(f(x,y))$

Which of the following statements is true?

A. $F(f(x,y)).G(f(x,y)) = -F(f(x,y)).G(f(x,y))$
B. $F(f(x,y)).G(f(x,y)) > -F(f(x,y)).G(f(x,y))$
C. $F(f(x,y)).G(f(x,y)) \neq G(f(x,y)).F(f(x,y))$
D. $F(f(x,y)) + G(f(x,y)) + f(x,y) = f(-x,-y)$

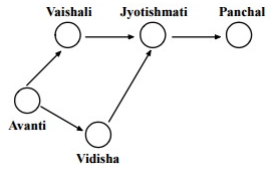
### 2.17.1 Graphs: CAT 2001 | Question: 115 top

The following sketch shows the pipelines carrying material from one location to another. Each location has a demand for material. The demand at Vaishali is $400$, at Jyotishmati is $400$, at Panchal is $700$, and at Vidisha is $200$. Each arrow indicates the direction of material flow through the pipeline. The flow from Vaishali to Jyotishmati is $300$. The quantity of material flow is such that the demands at all these locations are exactly met. The capacity of each pipeline is $1000$.



The quantity moved from Avanti to Vidisha is

A. 200
B. 800
C. 700
D. 1000

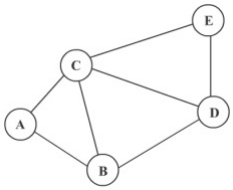
## 2.17.4 Graphs: CAT 2003 | Question: 2-123 top

**Answer the question on the basis of following information.**

Shown below is a layout of major streets in a city.



**Two days (Thursday and Friday) are left for campaigning before a major election, and the city administration has received requests from five political parties for taking out their processions along the following routes.**

**Congress: A-C-D-E**

**BJP: A-B-D-E**

**SP: A-B-C-E**

**BSP: B-C-E**

**CPM: A-C-D**

**Street B-D cannot be used for a political procession on Thursday due to a religious procession. The district administration has a policy of not allowing more than one procession to pass along the same street on the same day. However, the administration must allow all parties to take out their procession during these two days.**

Congress procession can be allowed

A. only on Thursday.
B. only on Friday.
C. on either day.
D. only if the religious procession is cancelled.

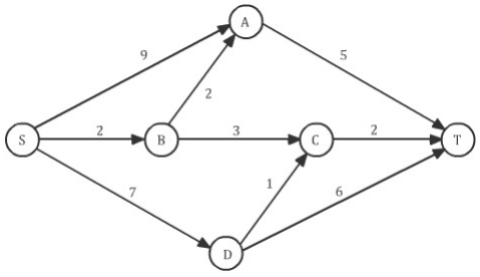
## 2.17.6 Graphs: CAT 2006 | Question: 16 top

**Answer the question based on the information given below:**

A significant amount of traffic flows from point S to point T in the one-way street network shown below. Points A, B, C and D are junctions in the network, and the arrows mark the direction of traffic flow. The fuel cost in rupees for travelling along a street is indicated by the number of adjacent to the arrow representing the street.



Motorists travelling from point S to point T would obviously take the route for which the total cost of travelling is the minimum. If two or more routes have the same least travel cost, then motorists are indifferent between them. hence the traffic gets evenly distributed among all the least cost routes.

The government can control the flow of traffic only by levying appropriate toll at each junction. For example, if a motorist takes a route S-A-T (using junction A alone), then the total cost of travel would be Rs $14$ (ie., Rs $9+$ Rs $5$) plus the toll charged at junction A.

If the government wants to ensure that all motorists travelling from S to T pay the same amount (fuel costs and toll combined) regardless of the route they choose and the street from B to C under repairs (and hence unusable), then a feasible set of toll

charged (in rupees) at junction A, B, C and D are respectively to achieve this goal is

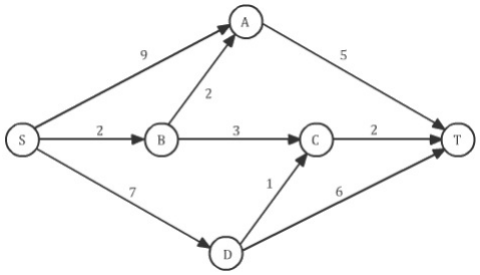
A. $2,5,3,2$ B. $0,5,3,1$ C. $1,5,3,2$ D. $2,3,5,1$ E. $1,3,5,1$

cat2006 logical-reasoning logic-puzzles graphs

## 2.17.7 Graphs: CAT 2006 | Question: 17 top

**Answer the question based on the information given below:**

A significant amount of traffic flows from point S to point T in the one-way street network shown below. Points A, B, C and D are junctions in the network, and the arrows mark the direction of traffic flow. The fuel cost in rupees for travelling along a street is indicated by the number of adjacent to the arrow representing the street.



Motorists travelling from point S to point T would obviously take the route for which the total cost of travelling is the minimum. If two or more routes have the same least travel cost, then motorists are indifferent between them. hence the traffic gets evenly distributed among all the least cost routes.

The government can control the flow of traffic only by levying appropriate toll at each junction. For example, if a motorist takes a route S-A-T (using junction A alone), then the total cost of travel would be Rs $14$ (ie., Rs $9+$ Rs $5$) plus the toll charged at junction A.

If the government wants to ensure that no traffic flows on the street from D to T, while equal amount of traffic flows through junction A and C, than a feasible set of toll charged (in rupees) at junctions A, B, C and D respectively to achieve this goal is

A. $1,5,3,3$ B. $1,4,4,3$ C. $1,5,4,2$ D. $0,5,2,3$ E. $0,5,2,2$

cat2006 logical-reasoning logic-puzzles graphs

## 2.17.8 Graphs: CAT 2006 | Question: 18 top

**Answer the question based on the information given below:**

A significant amount of traffic flows from point S to point T in the one-way street network shown below. ## 2.18.1 Logic Puzzles: CAT 2000 | Question: 111 top

In a recent report, the gross enrolment ratios at the primary level, that is, the number of children enrolled in classes one to five as a proportion of all children aged 6 to 10, were shown to be very high for most states; in many cases they were way above 100 percent! These figures are not worth anything, since they are based on the official enrollment data compiled from school records. They might as well stand for 'gross exaggeration ratios'.

Which one of the following options best supports the claim that the ratios are exaggerated?

A. The definition of gross enrolment ratio does not exclude, in its numerator, children below 6 years or above 10 years enrolled in classes one to five.
B. A school attendance study found that many children enrolled in the school records were not meeting a minimum attendance requirement of 80 percent.
C. A study estimated that close to 22 percent of children enrolled in the class one records were below 6 years of age and still to start going to school.
D. Demographic surveys show shifts in the population profile which indicate that the number of children in the age group 6 to 10 years is declining.

### 2.18.2 Logic Puzzles: CAT 2000 | Question: 112 top

Szymanski suggests that the problem of racism in football may be present even today. He begins by verifying an earlier hypothesis that clubs' wage bills explain 90% of their performance. Thus, if players' salaries were to be only based on their abilities, clubs that spend more should finish higher. If there is pay discrimination against some group of players- fewer teams bidding for black players thus lowering the salaries for blacks with the same ability as whites- that neat relation may no longer hold. He concludes that certain clubs seem to have achieved much less than what they could have, by not recruiting black players.

Which one of the following findings would best support Szymanski's conclusion?

A. Certain clubs took advantage of the situation by hiring above-average shares of black players.
B. Clubs hired white players at relatively high wages and did not show proportionately good performance.
C. During the study period, clubs in towns with a history of discrimination against blacks, under-performed relative to their wage bills.
D. Clubs in one region, which had higher proportions of black players, had significantly lower wage bills than their counterparts in another region which had predominantly white players.

### 2.18.3 Logic Puzzles: CAT 2000 | Question: 113 top

The pressure on Italy's 257 jails has been increasing rapidly. These jails are old and overcrowded. They are supposed to hold up to 43,000 people - 9,000 fewer than now. San Vittore in Milan, which has 1,800 inmates, is designed for 800. The number of foreigners inside jails has also been increasing. The minister in charge of prisons fears that tensions may snap, and so has recommended to the government an amnesty policy.

Which one of the following, if true, would have most influenced the recommendation of the minister?

A. Opinion polls have indicated that many Italians favour a general pardon.
B. The opposition may be persuaded to help since amnesties must be approved by a two third majority in the parliament.
C. During a recent visit to a large prison, the pope, whose pronouncements are taken seriously, appealed for 'a gesture of clemency'.
D. Shortly before the recommendation was made, 58 prisons reported disturbances in a period of two weeks.

cat2000 logical-reasoning logic-puzzles

### 2.18.4 Logic Puzzles: CAT 2000 | Question: 114 top

The offer of the government to make iodised salt available at a low price of one rupee per kilo is welcome, especially since the government seems to be so concerned about the ill effects of noniodised salt. But it is doubtful whether the offer will actually be implemented. Way back in 1994, the government, in an earlier effort, had prepared reports outlining three new and simple but experimental methods for reducing the costs of iodisation to about five paise per kilo. But these reports have remained just those- reports on paper.

Which one of the following, if true, most weakens the author's contention that it is doubtful whether the offer will be actually implemented?

A. The government proposes to save on costs by using the three methods it has already devised for iodisation.
B. The chain of fair-price distribution outlets now covers all the districts of the state.
C. Many small-scale and joint-sector units have completed trials to use the three iodisation methods for regular production.
D. The government which initiated the earlier effort is in place even today and has more information on the effects of noniodised salt.

## 2.18.5 Logic Puzzles: CAT 2000 | Question: 115 top

About 96% of Scandinavian moths have ears tuned to the ultrasonic pulses that bats, their predators, emit. But the remaining 4% do not have ears and are deaf. However, they have a larger wingspan than the hearing moths, and also have higher wingloadings- the ratio between a wing's area and its weight- meaning higher maneuverability.

Which one of the following can be best inferred from the above passage?

A. A higher proportion of deaf moths than hearing moths fall prey to bats.
B. Deaf moths may try to avoid bats by frequent changes in their flight direction.
C. Deaf moths are faster than hearing moths, and so are less prone to becoming a bat's dinner than hearing moths.
D. The large wingspan enables deaf moths to better receive and sense the pulses of their bat predators.

## 2.18.6 Logic Puzzles: CAT 2000 | Question: 116 top

Argentina's beef cattle herd has dropped to under 50 million from 57 million ten years ago in 1990. The animals are worth less, too: prices fell by over a third last year, before recovering slightly. Most local meat packers and processors are infinancial trouble, and recent years have seen a string of plant closures. The Beef Producers' Association has now come up with a massive advertisement campaign calling upon Argentines to eat more beef - their "juicy, healthy, rotund, plate-filling" steaks.

Which one of the following, if true, would contribute most to a failure of the campaign?

A. There has been a change in consumer preference towards eating leaner meats like chicken and fish.
B. Prices of imported beef have been increasing, thus making locally grown beef more competitive in terms of pricing.
C. The inability to cross breed native cattle with improved varieties has not increased production to adequate levels.
D. Animal rights pressure groups have come up rapidly, demanding better and humane treatment of farmyard animals like beef cattle.

cat2000 logical-reasoning logic-puzzles

## 2.18.7 Logic Puzzles: CAT 2000 | Question: 117 top

The problem of traffic congestion in Athens has been testing the ingenuity of politicians and town planners for years. But the measures adopted to date have not succeeded in decreasing the number of cars on the road in the city centre. In 1980, an odds and evens number-plate legislation was introduced, under which odd and even plates were banned in the city centre on alternate days, thereby expecting to halve the number of cars in the city centre. Then in 1993 it was decreed that all cars in use in the city centre must be fitted with catalytic converters; a regulation had just then been introduced, substantially reducing import taxes on cars with catalytic converters, the only condition being that the buyer of such a 'clean' car offered for destruction a car at least 15 years old.

Which one of the following options, if true, would best support the claim that the measures adopted to date have not succeeded?

A. In the 1980s, many families purchased second cars with the requisite odd or even number plate.
B. In the mid-1990s, many families found it feasible to become first-time car owners by buying a car more than 15 years old and turning it in for a new car with catalytic converters.
C. Post-1993, many families seized the opportunity to sell their more than 15 yearold cars and buy 'clean' cars from the open market, even if it meant forgoing the import tax subsidy.
D. All of the above.

cat2000 logical-reasoning logic-puzzles

## 2.18.8 Logic Puzzles: CAT 2000 | Question: 118 top

Although in the limited sense of freedom regarding appointments and internal working, the independence of the Central Bank

is unequivocally ensured, the same cannot be said of its right to pursue monetary policy without coordination with the central government. The role of the Central Bank has turned out to be subordinate and advisory in nature.

Which one of the following best supports the conclusion drawn in the passage?

A. A decision of the chairman of the Central Bank to increase the bank rate by two percentage points sent shock-waves in industry, academic and government circles alike.
B. Government has repeatedly resorted to monetisation of the debt despite the reservation of the Central Bank.
C. The Central Bank does not need the central government's nod for replacing soiled currency notes.
D. The inability to remove coin shortage was a major shortcoming of this government.

cat2000 logical-reasoning logic-puzzles

### 2.18.9 Logic Puzzles: CAT 2000 | Question: 119 top

The Shveta-chattra, the "White Umbrella," was a symbol of sovereign political authority placed over the monarch's head at the time of the coronation. The ruler so inaugurated was regarded not as a temporal autocrat but as the instrument of protective and sheltering firmament of supreme law. The white umbrella symbol is of great antiquity and its varied use illustrates the ultimate common basis of nontheocratic nature of states in the Indian tradition. As such, the umbrella is found, although not necessarily a white one, over the head of Lord Ram, the Mohammedan sultans and Chatrapati Shivaji.

Which one of the following best summarises the above passage?

A. The placing of an umbrella over the ruler's head was a common practice in the Indian subcontinent.
B. The white umbrella represented the instrument of firmament of the supreme law and the non-theocratic nature of Indian states.
C. The umbrella, not necessarily a white one; was a symbol of sovereign political authority.
D. The varied use of the umbrella symbolised the common basis of the non-theocratic nature of states in the Indian tradition.

### 2.18.10 Logic Puzzles: CAT 2000 | Question: 120 top

The theory of games is suggested to some extent by parlour games such as chess and bridge. Friedman illustrates two distinct features of these games. First, in a parlour game played for money, if one wins the other (others) loses (lose). Second, these games are games involving a strategy. In a game of chess, while choosing what action is to be taken, a player tries to guess how his/her opponent will react to the various actions he or she might take. In contrast, the cardpastime, 'patience' or 'solitaire' is played only against chance.

Which one of the following can best be described as a "game?"

A. The team of Tenzing Norgay and Edmund Hillary climbing Mt. Everest for the first time in human history.
B. A national level essay writing competition.
C. A decisive war between the armed forces of India and Pakistan over Kashmir.
D. Oil Exporters' Union deciding on world oil prices, completely disregarding the countries which have at most minimal oil production.

### 2.18.18 Logic Puzzles: CAT 2001 | Question: 133 top

The Banerjees, the Sharmas, and the Pattabhiramans each have a tradition of eating Sunday lunch as a family. Each family serves a special meal at a certain time of day. Each family has a particular set of chinaware used only for this meal. Use the clues below to answer the following question.

- The Sharma family eats at noon.
- The family that serves fried brinjal uses blue chinaware.
- The Banerjee family eats at 2 o'clock.
- The family that serves sambar does not use red chinaware.
- The family that eats at 1 o'clock serves fried brinjal.
- The Pattabhiraman family does not use white chinaware.
- The family that eats last likes makkai-ki-roti.

Which one of the following statements is true?

A. The Banerjees eat makkai-ki-roti at 2 o'clock, the Sharmas eat fried brinjal at 12 o'clock and the Pattabhiramans eat sambar from red chinaware.
B. The Sharmas eat sambar served in white chinaware, the Pattabhiramans eat fried brinjal at 1 o'clock, and the Banerjees eat makkai-ki-roti served in blue chinaware.
C. The Sharmas eat sambar at noon, the Pattabhiramans eat fried brinjal served in blue chinaware, and the Banerjees eat makkai-ki-roti served in red chinaware.
D. The Banerjees eat makkai-ki-roti served in white chinaware, the Sharmas eat fried brinjal at 12 o'clock and the Pattabhiramans eat sambar from red chinaware.

### 2.18.19 Logic Puzzles: CAT 2001 | Question: 134 top

While Balbir had his back turned, a dog ran into his butcher shop, snatched a piece of meat off the counter and ran out. Balbir was mad when he realised what had happened. He asked three other shopkeepers, who had seen the dog, to describe it. The

shopkeepers really didn't want to help Balbir. So each of them made a statement which contained one truth and one lie.

A. Shopkeeper Number 1 said: "The dog had black hair and a long tail."
B. Shopkeeper Number 2 said: "The dog has a short tail and wore a collar."
C. Shopkeeper Number 3 said: "The dog had white hair and no collar."

Based on the above statements, which of the following could be a correct description?

A. The dog had white hair, short tail and no collar.
B. The dog had white hair, long tail and a collar.
C. The dog had black hair, long tail and a collar.
D. The dog had black hair, long tail and no collar.

## 2.18.20 Logic Puzzles: CAT 2001 | Question: 137 top

**Answer the below question based on the following instructions:**
A group of three or four has to be selected from seven persons. Among are two women: Fiza and Kavita, and five men: Ram, Shyam, David, Peter and Rahim. Ram would not like to be in the group if Shyam is also selected. Shyam and Rahim want to be selected together in the group. Kavita would like to be in the group only if David is also there. David, if selected, would not like Peter in the group. Ram would like to be in the group only if Peter is also there. David insists that Fiza be selected in case he is there in the group.

Which of the following is a feasible group of three?

A. David, Ram, Rahim
B. Peter, Shyam, Rahim
C. Kavita, David, Shyam
D. Fiza, David, Ram

## 2.18.23 Logic Puzzles: CAT 2001 | Question: 140 top

On her walk through the park, Hansa collected 50 coloured leaves, all either maple or oak. She sorted them by category when she got home, and found the following:

A. The number of red oak leaves with spots is even.
B. The number of red oak leaves with spots is odd.
C. All red oak leaves are spotted.
D. There are exactly 22 spotted maple leaves that are neither red nor spotted.
E. There are exactly 22 red maple leaves that are neither spotted nor red.
F. There are exactly 22 maple leaves that are neither spotted nor red.

How many oak leaves did she collect?

A. 22 B. 17 C. 25 D. 18

## 2.18.28 Logic Puzzles: CAT 2001 | Question: 145 top

In a "keep-fit" gymnasium class there are fifteen females enrolled in a weight-loss program. They all have been grouped in any one of the five weight-groups $W1$, $W2$, $W3$, $W4$, or $W5$. One instructor is assigned to one weight-group only. Sonali, Shalini, Shubhra, and Shahira belong to the same weight-group. Sonali and Rupa are in one weight-group, Rupali and Renuka are also in one weight-group. Rupa, Radha, Renuka, Ruchika and Ritu belong to different weight-groups. Somya cannot be with Ritu, and Tara cannot be with Radha. Komal cannot be with Radha, Somya, or Ritu. Shahira is in $W1$ and Somya is in $W4$ with Ruchika. Sweta and Jyotika cannot be with Rupali, but are in a weight-group with total membership of four. No weight-group can have more than five or less than one member. Amita, Babita, Chandrika, Deepika, and Elina are instructors of weight-groups with membership sizes $5, 4, 3, 2$ and $1$, respectively. Who is the instructor of Radha?

A. Babita B. Elina C. Chandrika D. Deepika

## 2.18.29 Logic Puzzles: CAT 2001 | Question: 146 top

A king has unflinching loyalty from eight of his ministers $M1$ to $M8$, but he has to select only four to make a cabinet committee. He decides to choose these four such that each selected person shares a liking with at least one of the other three selected. The selected persons must also hate one of the likings of any of the other three persons selected.

- $M1$ likes fishing and smoking, but hates gambling.
- $M2$ likes smoking and drinking, but hates fishing.
- $M3$ likes gambling, but hates smoking.
- $M4$ likes mountaineering, but hates drinking.
- $M5$ likes drinking, but hates smoking and mountaineering.
- $M6$ likes fishing, but hates smoking and mountaineering.
- $M7$ likes gambling and mountaineering, but hates fishing.
- $M8$ likes smoking and gambling, but hates mountaineering.

Who are the four people selected by the king?

A. M1, M2, M5, M6
B. M3, M4, M5, M6
C. M4, M5, M6, M8
D. M1, M2, M4, M7

## 2.18.30 Logic Puzzles: CAT 2001 | Question: 147 top

**Answer the below question based on the following information:**
$A$ and $B$ are two sets (e.g. $A$ = mothers, $B$ = women). The elements that could belong to both the sets (e.g. women who are mothers) is given by the set $C = A.B$. The elements which could belong to either $A$ or $B$, or both, is indicated by the set $D = A \cup B$. A set that does not contain any elements is known as a null set, represented by $\phi$ (for example, if none of the women in the set $B$ is a mother, they $C = A.B$ is a null set, or $C = \phi$).
Let 'V' signify the set of all vertebrates; 'M' the set of all mammals; 'D' dogs; 'F' fish; 'A' Alsatian and 'P', a dog named Pluto.

Given that $X = M.D$ is such that $X = D$, which of the following is true?

A. All dogs are mammals.
B. Some dogs are mammals.
C. $X = \phi$
D. All mammals are dogs.

cat2001 logical-reasoning logic-puzzles

## 2.18.31 Logic Puzzles: CAT 2001 | Question: 148 top

**Answer the below question based on the following information:**
$A$ and $B$ are two sets (e.g. $A$ = mothers, $B$ = women). The elements that could belong to both the sets (e.g. women who are mothers) is given by the set $C = A.B$. The elements which could belong to either $A$ or $B$, or both, is indicated by the set $D = A \cup B$. A set that does not contain any elements is known as a null set, represented by $\phi$ (for example, if none of the women in the set $B$ is a mother, they $C = A.B$ is a null set, or $C = \phi$).
Let 'V' signify the set of all vertebrates; 'M' the set of all mammals; 'D' dogs; 'F' fish; 'A' Alsatian and 'P', a dog named Pluto.

If $Y = F.(D.V)$, is not a null set, it implies that

A. All fish are vertebrates
B. All dogs are vertebrates

C. Some fish are dogs
D. None of the above

cat2001 logical-reasoning logic-puzzles

### 2.18.32 Logic Puzzles: CAT 2001 | Question: 149 top

**Answer the below question based on the following information:**
$A$ and $B$ are two sets (e.g. $A$ = mothers, $B$ = women). The elements that could belong to both the sets (e.g. women who are mothers) is given by the set $C = A.B$. The elements which could belong to either $A$ or $B$, or both, is indicated by the set $D = A \cup B$. A set that does not contain any elements is known as a null set, represented by $\phi$ (for example, if none of the women in the set $B$ is a mother, they $C = A.B$ is a null set, or $C = \phi$).
Let 'V' signify the set of all vertebrates; 'M' the set of all mammals; 'D' dogs; 'F' fish; 'A' Alsatian and 'P', a dog named Pluto.

If $Z = (P.D) \cup M$, then

1. The elements of $Z$ consist of Pluto the dog or any other mammal.
2. $Z$ implies any dog or mammal.
3. $Z$ implies Pluto or any dog that is a mammal.
4. $Z$ is a null set.

cat2001 logical-reasoning logic-puzzles

### 2.18.33 Logic Puzzles: CAT 2001 | Question: 150 top

**Answer the below question based on the following information:**
$A$ and $B$ are two sets (e.g. $A$ = mothers, $B$ = women). The elements that could belong to both the sets (e.g. women who are mothers) is given by the set $C = A.B$. The elements which could belong to either $A$ or $B$, or both, is indicated by the set $D = A \cup B$. A set that does not contain any elements is known as a null set, represented by $\phi$ (for example, if none of the women in the set $B$ is a mother, they $C = A.B$ is a null set, or $C = \phi$).
Let 'V' signify the set of all vertebrates; 'M' the set of all mammals; 'D' dogs; 'F' fish; 'A' Alsatian and 'P', a dog named Pluto.

If $P.A = \phi$ and $P \cup A = D$, then which of the following is true?

A. Pluto and Alsatians are dogs.
B. Pluto is an Alsatian.
C. Pluto is not an Alsatian.
D. $D$ is a null set.

### 2.18.35 Logic Puzzles: CAT 2002 | Question: 150 top

**Read the information given below and answer the question that follow.**

- A causes B or C, but not both.

- F occurs only if B occurs
- D occurs if B or C occurs
- E occurs only if C occurs
- J occurs only if E and F occurs.
- D causes G or H or both
- H occurs if E occurs
- G occurs if F occurs

Which may occur as a result of a cause not mentioned?

A. E B. Both E and F C. Either B or C D. G

cat2002 logical-reasoning logic-puzzles

### 2.18.36 Logic Puzzles: CAT 2003 | Question: 1-100 top

**Answer the question on the basis of the information given below:**

Five friends meet every morning at Sree Sagar restaurant for an idli-vada breakfast. Each consumes a different number of idlis and Vadas. The number of idlis consumed are $1, 4, 5, 6,$ and $8$, while the number of vadas consumed are $0, 1, 2, 4,$ and $6$. Below are some more facts about who eats what and how much?

i. The number of vadas eaten by Ignesh is three times the number of vadas consumed by the person who eats four idlis.
ii. Three persons, inclusing the one who eats four vadas, eat without chutney.
iii. Sandeep does not like any chutney.
iv. The one who eats one idli a day does not eat any vadas or chutney. Furhter, he is not mukesh.
v. Daljit eats idli with chutney and also eats vada.
vi. Mukesh, who does not take chutney, eats half as many as vadas as the person who eats twice as many idlis he does.
vii. Bimal eats two more idlis than Ignesh, but Ignesh eats two more vadas than Bimal.

Which of the following statements is true?

A. Mukesh eats $8$ idlis and $4$ vadas but no chutney
B. The person who eats $5$ idlis and one vada does not take chutney
C. The person who eats equal number of vadas and idlis also takes chutney
D. The person who eats $4$ idlis and $2$ vadas also takes chutney

cat2003-1 logical-reasoning logic-puzzles

### 2.18.37 Logic Puzzles: CAT 2003 | Question: 1-78 top

**Answer the questions on the basis of the information given below:**

A, B, C, D, E and F are a group of friends. There are two housewives, one professor, one engineer, one accountant and one lawyer in the group. There are only two married couples in the group. The lawyer is married to D, who is a housewife. No woman in the group is a either an engineer nor an accountant. C, the accountant, married to F, who is a professor. A is married to a housewife. E is not a housewife.

Which of the following is one of the married couples?

A. A & B B. B & E C. D & E D. A & D

cat2003-1 logical-reasoning logic-puzzles

### 2.18.38 Logic Puzzles: CAT 2003 | Question: 1-79 top

**Answer the question on the basis of the information given below:**

A, B, C, D, E and F are a group of friends. There are two housewives, one professor, one engineer, one accountant and one lawyer in the group. There are only two married couples in the group. The lawyer is married to D, who is a housewife. No woman in the group is a either an engineer nor an accountant. C, the accountant, married to F, who is a professor. A is married to a housewife. E is not a housewife.

What is E's profession?

A. Engineer B. Lawyer C. Professor D. Accountant

## 2.18.39 Logic Puzzles: CAT 2003 | Question: 1-80 top

**Answer the question on the basis of the information given below:**

A, B, C, D, E and F are a group of friends. There are two housewives, one professor, one engineer, one accountant and one lawyer in the group. There are only two married couples in the group. The lawyer is married to D, who is a housewife. No woman in the group is a either an engineer nor an accountant. C, the accountant, married to F, who is a professor. A is married to a housewife. E is not a housewife.

How many members of the group are male?

A. 2
B. 3
C. 4
D. cannot be determined

cat2003-1 logical-reasoning logic-puzzles

Answer key

## 2.18.40 Logic Puzzles: CAT 2003 | Question: 1-81 top

**Answer the questions on the basis of the information given below:**

The Head of a newly formed government desires to appoint five of the six elected members A, B, C, D, E and F to portfolios of Home, Power, Defence, Telecom and Finance. F does not want any portfolio if D gets one of the five. C wants either Home or Finance or no portfolio. B says if D gets either Power or Telecom then she must get the other one. E insists on a portfolio if A gets one.

Which is a valid assignment?

A. A-Home, B-Power, C-Defence, D-Telecom, E-Finance
B. C-Home, D-Power, A-Defence, B-Telecom, E-Finance
C. A-Home, B-Power, E-Defence, D-Telecom, F-Finance
D. B-Home, F-Power, E-Defence, C-Telecom, A-Finance

cat2003-1 logical-reasoning logic-puzzles

## 2.18.41 Logic Puzzles: CAT 2003 | Question: 1-82 top

**Answer the questions on the basis of the information given below:**

The Head of a newly formed government desires to appoint five of the six elected members A, B, C, D, E and F to portfolios of Home, Power, Defence, Telecom and Finance. F does not want any portfolio if D gets one of the five. C wants either Home or Finance or no portfolio. B says if D gets either Power or Telecom then she must get the other one. E insists on a portfolio if A gets one.

If A gets Home and C gets Finance, then which is NOT a valid assignment for Defence and Telecom?

A. D-Defence, B-Telecom
B. F-Defence, B-Telecom
C. B-Defence, E-Telecom
D. B-Defence, D-Telecom

cat2003-1 logical-reasoning logic-puzzles

## 2.18.42 Logic Puzzles: CAT 2003 | Question: 1-83 top

**Answer the question based in the information given below:**

Rang Barsey Paint Company (RBPC) is in the business of manufacturing paints. RBPC buys RED, YELLOW, WHITE, ORANGE and PINK paints. ORANGE paint can also be produced by mixing RED and YELLOW paints in equal proportions. Similarly, PINK paint can also be produced by mixing equal amounts of RED and WHITE paints. Among other paints, RBPC sells CREAM paint (formed by mixing WHITE and YELLOW in the ratio $70:30$) AVACADO paint (formed by mixing equal amounts of ORANGE and PINK paints) and WASHED ORANGE paint (formed by mixing equal amounts of ORANGE and WHITE paints). The following table provides the price at which RBPC buys paints.

| Colour | Rs./Litre |
|---|---|
| RED | 20 |
| YELLOW | 25 |
| WHITE | 15 |
| ORANGE | 22 |
| PINK | 18 |

The cheapest way to manufacture AVACADO point would cost

A. Rs. 19.50 per litre
B. Rs. 19.75 per litre
C. Rs. 20.00 per litre
D. Rs. 20.25 per litre

cat2003-1 logical-reasoning logic-puzzles

## 2.18.43 Logic Puzzles: CAT 2003 | Question: 1-84 top

**Answer the question based in the information given below:**

Rang Barsey Paint Company (RBPC) is in the business of manufacturing paints. RBPC buys RED, YELLOW, WHITE, ORANGE and PINK paints. ORANGE paint can also be produced by mixing RED and YELLOW paints in equal proportions. Similarly, PINK paint can also be produced by mixing equal amounts of RED and WHITE paints. Among other paints, RBPC sells CREAM paint (formed by mixing WHITE and YELLOW in the ratio 70 : 30) AVACADO paint (formed by mixing equal amounts of ORANGE and PINK paints) and WASHED ORANGE paint (formed by mixing equal amounts of ORANGE and WHITE paints). The following table provides the price at which RBPC buys paints.

| Colour | Rs./Litre |
|---|---|
| RED | 20 |
| YELLOW | 25 |
| WHITE | 15 |
| ORANGE | 22 |
| PINK | 18 |

WASHED ORANGE can be manufactured by mixing

A. CREAM and RED in the ratio 14 : 10
B. CREAM and RED in the ratio 3 : 1
C. YELLOW and PINK in the ratio 1 : 1
D. RED, YELLOW and WHITE in the ratio 1 : 1 : 2

cat2003-1 logical-reasoning logic-puzzles

Answer key

## 2.18.44 Logic Puzzles: CAT 2003 | Question: 1-85 top

**Answer the question based in the information given below:**

Rang Barsey Paint Company (RBPC) is in the business of manufacturing paints. RBPC buys RED, YELLOW, WHITE, ORANGE and PINK paints. ORANGE paint can also be produced by mixing RED and YELLOW paints in equal proportions. Similarly, PINK paint can also be produced by mixing equal amounts of RED and WHITE paints. Among other paints, RBPC sells CREAM paint (formed by mixing WHITE and YELLOW in the ratio 70 : 30) AVACADO paint (formed by mixing equal amounts of ORANGE and PINK paints) and WASHED ORANGE paint (formed by mixing equal amounts of ORANGE and WHITE paints). The following table provides the price at which RBPC buys paints.

| Colour | Rs./Litre |
|---|---|
| RED | 20 |
| YELLOW | 25 |
| WHITE | 15 |
| ORANGE | 22 |
| PINK | 18 |

Assume that AVACADO, CREAM and WASHED ORANGE each sells for the same price. Which of the three is the most profitable manufacture?

A. AVACADO
B. CREAM
C. WASHED ORANGE
D. Sufficient data is not available

## 2.18.49 Logic Puzzles: CAT 2003 | Question: 1-91 top

**Choose 1 if the question can be answered by one of the statements alone but not by other.**

**Choose 2 if the question can be answered by using either statement alone.**

**Choose 3 if the question can be answered by using both the statements together but cannot be answered by using either statement alone.**

**Choose 4 if the question cannot be answered even by using both the statements A and B.**

Each packet of SOAP costs Rs. 10. Inside each packet is a gift coupon labelled labelled with one of the letters S, O, A and P. If a customer submits four such coupons that make up the word SOAP, the customer gets a free SOAP packet. Ms. X kept buying packet after packet of SOAP till she could get one set of coupons that formed the word SOAP. How many coupon with the label P did she get in the above process?

A. The last label obtained by her was S and the total number of amount spent was Rs. 210.
B. The total number of vowels obtained was 18.

cat2003-1 logical-reasoning logic-puzzles

## 2.18.50 Logic Puzzles: CAT 2003 | Question: 1-92 top

**Choose 1 if the question can be answered by one of the statements alone but not by other.**

**Choose 2 if the question can be answered by using either statement alone.**

**Choose 3 if the question can be answered by using both the statements together but cannot be answered by using either statement alone.**

**Choose 4 if the question cannot be answered even by using both the statements A and B.**

If A and B run a race, then A wins by $60$ seconds. If B and C run the same race, then B wins by $30$ seconds. Assuming that the C maintains the uniform speed, what is the time taken by C to finish the race?

A. A and C run the same race and A wins by $375$ meters.
B. The length of the race is $1$ km.

cat2003-1 logical-reasoning logic-puzzles

## 2.18.51 Logic Puzzles: CAT 2003 | Question: 1-93 top

**Answer the question on the basis of the information given below:**

Some children were taking free throws at the basket ball court in the school during lunch break. Below are some facts about how many baskets these children shot.

i. Ganesh shot $8$ baskets less than Ashish
ii. Dhanraj and Ramesh together shot $37$ baskets.
iii. Jugraj shot $8$ baskets more than Dhanraj.
iv. Ashish shot $5$ baskets more than Dhanraj.
v. Ashish and Ganesh together shot $40$ baskets.

Which of the following statements is true?

A. Ramesh shot $18$ baskets and Dhanraj shot $19$ baskets.
B. Ganesh shot $24$ baskets and Ashish shot $16$ baskets.
C. Jugraj shot $19$ baskets and Dhanraj shot $27$ baskets.
D. Dhanraj shot $11$ baskets and Ashish shot $16$ baskets.

cat2003-1 logical-reasoning logic-puzzles

## 2.18.52 Logic Puzzles: CAT 2003 | Question: 1-94 top

**Answer the question on the basis of the information given below:**

Some children were taking free throws at the basket ball court in the school during lunch break. Below are some facts about how many baskets these children shot.

i. Ganesh shot $8$ baskets less than Ashish
ii. Dhanraj and Ramesh together shot $37$ baskets.
iii. Jugraj shot $8$ baskets more than Dhanraj.
iv. Ashish shot $5$ baskets more than Dhanraj.
v. Ashish and Ganesh together shot $40$ baskets.

Which of the following statements is true?

A. Dhanrah and Jugraj together shot $46$ baskets.
B. Ganesh shot $18$ baskets and Ramesh shot $21$ baskets.
C. Dhanraj shot $3$ more baskets than Ramesh.
D. Ramesh and Jugraj together shot $29$ baskets.

## 2.18.53 Logic Puzzles: CAT 2003 | Question: 1-95 top

**Answer the question on the basis of the information given below:**

Five women decided to go for shopping in MG road, Bangalore. They arrived at the designated meeting place in the following order: 1. Archana, 2. Chellama, 3. Dhenuka, 4. Helen and 5. Shahnaz. Each women spent at least Rs. 1000. Below are some additional facts about how much they spent during their shopping spree.

i. The woman who spent Rs. 2234 arrived before the lady who spent Rs. 1193
ii. One woman spent Rs. 13404 and she was not Dhenuka
iii. One woman spent Rs. 1378 more than Chellamma.
iv. One woman spent Rs 2517 and she was not Archana.
v. Helen spent more than Dhenuka.
vi. Shahnaz spent the largest amount and Chellamma the smallest.

What was the amount spent by Helen?

A. Rs. 1193 B. Rs. 1340 C. Rs. 2234 D. Rs. 2517

cat2003-1 logical-reasoning logic-puzzles

## 2.18.54 Logic Puzzles: CAT 2003 | Question: 1-96 top

**Answer the question on the basis of the information given below:**

Five women decided to go for shopping in MG road, Bangalore. They arrived at the designated meeting place in the following order: 1. Archana, 2. Chellama, 3. Dhenuka, 4. Helen and 5. Shahnaz. Each women spent at least Rs. 1000. Below are some additional facts about how much they spent during their shopping spree.

i. The woman who spent Rs. 2234 arrived before the lady who spent Rs. 1193
ii. One woman spent Rs. 1340 and she was not Dhenuka
iii. One woman spent Rs. 1378 more than Chellamma.
iv. One woman spent Rs 2517 and she was not Archana.
v. Helen spent more than Dhenuka.
vi. Shahnaz spent the largest amount and Chellamma the smallest.

Which of the following amount was spent by one of them?

A. Rs. 1139 B. Rs. 1378 C. Rs. 2571 D. Rs. 2718

iv. One woman spent Rs 2517 and she was not Archana.
v. Helen spent more than Dhenuka.
vi. Shahnaz spent the largest amount and Chellamma the smallest.

The woman who spent Rs. 1193 is

A. Arahcna B. Chellamma C. Dhenuka D. Helen

cat2003-1 logical-reasoning logic-puzzles

## 2.18.56 Logic Puzzles: CAT 2003 | Question: 1-98 top

**Answer the question on the basis of the information given below:**

Five friends meet every morning at Sree Sagar restaurant for an idli-vada breakfast. Each consumes a different number of idlis and Vadas. The number of idlis consumed are $1, 4, 5, 6,$ and $8$, while the number of vadas consumed are $0, 1, 2, 4,$ and $6$. Below are some more facts about who eats what and how much?

i. The number of vadas eaten by Ignesh is three times the number of vadas consumed by the person who eats four idlis.
ii. Three persons, inclusing the one who eats four vadas, eat without chutney.
iii. Sandeep does not like any chutney.
iv. The one who eats one idli a day does not eat any vadas or chutney. Furhter, he is not mukesh.
v. Daljit eats idli with chutney and also eats vada.
vi. Mukesh, who does not take chutney, eats half as many as vadas as the person who eats twice as many idlis he does.
vii. Bimal eats two more idlis than Ignesh, but Ignesh eats two more vadas than Bimal.

Which of the following statements is true?

A. Daljit eats 5 idlis.
B. Ignesh eats 8 idlis.
C. Bimal eats 1 idlis.
D. Bimal eats 6 idlis.

cat2003-1 logical-reasoning logic-puzzles

## 2.18.57 Logic Puzzles: CAT 2003 | Question: 1-99 top

**Answer the question on the basis of the information given below:**

Five friends meet every morning at Sree Sagar restaurant for an idli-vada breakfast. Each consumes a different number of idlis and Vadas. The number of idlis consumed are $1, 4, 5, 6,$ and $8,$ while the number of vadas consumed are $0, 1, 2, 4,$ and $6.$ Below are some more facts about who eats what and how much?

i. The number of vadas eaten by Ignesh is three times the number of vadas consumed by the person who eats four idlis.
ii. Three persons, inclusing the one who eats four vadas, eat without chutney.
iii. Sandeep does not like any chutney.
iv. The one who eats one idli a day does not eat any vadas or chutney. Furhter, he is not mukesh.
v. Daljit eats idli with chutney and also eats vada.
vi. Mukesh, who does not take chutney, eats half as many as vadas as the person who eats twice as many idlis he does.
vii. Bimal eats two more idlis than Ignesh, but Ignesh eats two more vadas than Bimal.

Which of the following statements is true?

A. Sandeep eats 2 vadas.
B. Mukesh eats 4 vadas.
C. Ignesh eats 6 vadas.
D. Bimal eats 4 vadas.

cat2003-1 logical-reasoning logic-puzzles

## 2.18.58 Logic Puzzles: CAT 2003 | Question: 2-100 top

**Answer the questions on the basis of the information given below.**
The seven basic symbols in a certain numeral system and their respective values are as follows:
$\mathrm{I} = 1, \mathrm{V} = 5, \mathrm{X} = 10, \mathrm{L} = 50, \mathrm{C} = 100, \mathrm{D} = 500, \text{and } \mathrm{M} = 1000$
In general, the symbols in the numeral system are read from left to right, starting with the symbol representing the largest value; the same symbol cannot occur continuously more than three times; the value of the numeral is the sum of the values of the symbols. For example, $\mathrm{XXVII} = 10 + 10 + 5 + 1 + 1 = 27.$ An exception to the left-to-right reading occurs when a symbol is followed immediately by a symbol of greater value; then, the smaller value is subtracted from the large. For example, $\mathrm{XLVI} = (50 - 10) + 5 + 1 = 46.$

Which of the following can represent the numeral for $1995?$

a. MCMLXXV b. MCMXCV c. MVD d. MVM

A. Only (a) B. Only (b) C. Only (c) D. Only (d)

cat2003-2 logical-reasoning logic-puzzles

Answer key

## 2.18.59 Logic Puzzles: CAT 2003 | Question: 2-101 top

**Each question is followed by two statements, A and B. Answer each question using the following instructions.**

- Choose $1$ if the question can be answered by using statement A alone but not by using B alone.
- Choose $2$ if the question can be answered by using statement B alone but not by using A alone.
- Choose $3$ if the question can be answered by using either statement alone.
- Choose $4$ if the question can be answered by using both the statements together but not by either statement.

In a cricket match, the 'man of the match' award is given to the player scoring the highest number of runs. In case of a tie, the player (out of those locked in the tie) who has taken the higher number of catches is chosen. Even thereafter if there is a tie, the

player (out of those locked in the tie) who has dropped fewer catches is selected. Aakash, Biplab and Chirag who were contenders for the award dropped at least one catch each. Biplab dropped 2 catches more than Aakash did, scored 50, and took 2 catches. Chirag got two chances to catch and dropped both. Who was the 'man of the match'?

A. Chirag made 15 runs less than both Aakash and Biplab.
B. The catches dropped by Biplab are 1 more than the catches taken by Aakash.

cat2003-2 logical-reasoning logic-puzzles

### 2.18.60 Logic Puzzles: CAT 2003 | Question: 2-102 top

Each question is followed by two statements, A and B. Answer each question using the following instructions.

- Choose 1 if the question can be answered by using statement A alone but not by using B alone.
- Choose 2 if the question can be answered by using statement B alone but not by using A alone.
- Choose 3 if the question can be answered by using either statement alone.
- Choose 4 if the question can be answered by using both the statements together but not by either statement.

Four friends, A, B, C and D got the top four ranks in a competitive examination, but A did not get the first, B did not get the second, C did not get the third, and D did not get the fourth rank. Who secured which rank?

A. Neither A nor D were among the first 2.
B. Neither B nor C was third or fourth.

cat2003-2 logical-reasoning logic-puzzles

### 2.18.61 Logic Puzzles: CAT 2003 | Question: 2-103 top

**Each question is followed by two statements, A and B. Answer each question using the following instructions.**

- Choose 1 if the question can be answered by using statement A alone but not by using B alone.
- Choose 2 if the question can be answered by using statement B alone but not by using A alone.
- Choose 3 if the question can be answered by using either statement alone.
- Choose 4 if the question can be answered by using both the statements together but not by either statement.

The members of a local club contributed equally to pay Rs. 600 towards a donation. How much did each one pay?

A. If there had been five fewer members, each one would have paid an additional Rs. 10.
B. There were at least 20 members in the club, and each one paid no more than Rs. 30.

cat2003-2 logical-reasoning logic-puzzles

### 2.18.62 Logic Puzzles: CAT 2003 | Question: 2-104 top

**Each question is followed by two statements, A and B. Answer each question using the following instructions.**

- Choose 1 if the question can be answered by using statement A alone but not by using B alone.
- Choose 2 if the question can be answered by using statement B alone but not by using A alone.
- Choose 3 if the question can be answered by using either statement alone.
- Choose 4 if the question can be answered by using both the statements together but not by either statement.

A family has only one kid. The father says “after 'n' years, my age will be 4 times the age of my kid.” The mother says “after 'n' years, my age will be 3 times that of my kid.” What will be the combined ages of the parents after 'n' years?

A. The age difference between the parents is 10 years.
B. After “$n$” years, the kid is going to be twice as old as she is now.

cat2003-2 logical-reasoning logic-puzzles

### 2.18.63 Logic Puzzles: CAT 2003 | Question: 2-106 top

**Answer the question on the basis of following information.**
Four families decided to attend the marriage ceremony of one of their colleagues. One family has no kids, while the others have at least one kid each. Each family with kids has at least one kid attending the marriage. Given below is some information about

the families, and who reached when to attend the marriage.

- The family with 2 kids came just before the family with no kids.
- Shanthi who does not have any kids reached just before Sridevi's family.
- Sunil and his wife reached last with their only kid.
- Anil is not the husband of Joya.
- Anil and Raj are fathers.
- Sridevi's and Anita's daughters go to the same school.
- Joya came before Shanthi and met Anita when she reached the venue.
- Raman stays the farthest from the venue.
- Raj said his son could not come because of his exams.

Which woman arrived third?

A. Shanthi B. Sridevi C. Anita D. Joya

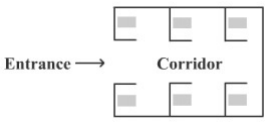
## 2.18.68 Logic Puzzles: CAT 2003 | Question: 2-116 top

Answer the question on the basis of following information.

The plan above shows an office block for six officers, A, B, C, D, E and F. Both B and C occupy offices to the right of corridor (as one enters the office block) and A occupies an office to the left of the corridor. E and F occupy offices on opposite sides of the corridor but their offices do not face each other. The offices of C and D face each other. E does not have a corner office. F's office is further down the corridor than A‟s, but on the same side.



Whose office faces A's office?

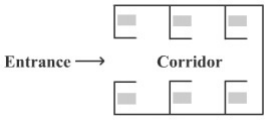
A. B B. C C. D D. E

cat2003-2 logical-reasoning logic-puzzles

## 2.18.69 Logic Puzzles: CAT 2003 | Question: 2-117 top

Answer the question on the basis of following information.

The plan above shows an office block for six officers, A, B, C, D, E and F. Both B and C occupy offices to the right of corridor (as one enters the office block) and A occupies an office to the left of the corridor. E and F occupy offices on opposite sides of the corridor but their offices do not face each other. The offices of C and D face each other. E does not have a corner office. F's office is further down the corridor than A‟s, but on the same side.



Who is/are F's neighbour(s)?

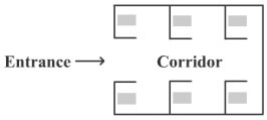
A. A only B. A and D C. C only D. B and C

cat2003-2 logical-reasoning logic-puzzles

## 2.18.70 Logic Puzzles: CAT 2003 | Question: 2-118 top

Answer the question on the basis of following information.

The plan above shows an office block for six officers, A, B, C, D, E and F. Both B and C occupy offices to the right of corridor (as one enters the office block) and A occupies an office to the left of the corridor. E and F occupy offices on opposite sides of the corridor but their offices do not face each other. The offices of C and D face each other. E does not have a corner office. F's office is further down the corridor than A‟s, but on the same side.



D was heard telling someone to go further down the corridor to the last office on the right. To whose room was he trying to direct that person?

A. A B. B C. C D. F

cat2003-2 logical-reasoning logic-puzzles

## 2.18.71 Logic Puzzles: CAT 2003 | Question: 2-119 top

**Answer the question on the basis of the following information.**

Seven faculty members at a management institute frequent a lounge for strong coffee and stimulating conversation. On being asked about their visit to the lounge last Friday we got the following responses.

JC: I came in first, and the next two persons to enter were SS and SM. When I left the lounge, JP and VR were present in the lounge. DG left with me.

JP: When I entered the lounge with VR, JC was sitting there. There was someone else, but I cannot remember who it was.

SM: I went to the lounge for a short while, and met JC, SS and DG in the lounge on that day.

SS: I left immediately after SM left.

DG: I met JC, SS, SM, JP and VR during my first visit to the lounge. I went back to my office with JC. When I went to the lounge the second time, JP and VR were there.

PK: I had some urgent work, so I did not sit in the lounge that day, but just collected my coffee and left. JP and DG were the only people in the lounge while I was there.

VR: No comments.

Based on the responses, which of the two JP or DG, entered the lounge first?

A. JP
B. DG
C. Both entered together
D. Cannot be deduced

## 2.18.75 Logic Puzzles: CAT 2004 | Question: 05 top

**Answer the questions based on the information given below:**

A study was conducted to ascertain the relative importance that employees in five different countries assigned to five different traits in their Chief Executive Officers. The traits were compassion (C), decisiveness (D), negotiation skills (N), public visibility (P), and vision (V). The level of dissimilarity between two countries is the maximum difference in the ranks allotted by the two countries to any of the five traits. The following table indicates the rank order of the five traits for each country.

| | Countries | | | | |
|---|---|---|---|---|---|
| **Rank** | **India** | **China** | **Japan** | **Malaysia** | **Thailand** |
| **1** | C | N | D | V | V |
| **2** | P | C | N | D | C |
| **3** | N | P | C | P | N |
| **4** | V | D | V | C | P |
| **5** | D | V | P | N | D |

Three of the following four pairs of countries have identical levels of dissimilarity. Which pair is the odd one out?

A. Malaysia and China
B. China and Thailand
C. Thailand and Japan
D. Japan and Malaysia

cat2004 logical-reasoning logic-puzzles

## 2.18.76 Logic Puzzles: CAT 2004 | Question: 06 top

**Answer the questions based on the information given below:**

A study was conducted to ascertain the relative importance that employees in five different countries assigned to five different traits in their Chief Executive Officers. The traits were compassion (C), decisiveness (D), negotiation skills (N), public visibility (P), and vision (V). The level of dissimilarity between two countries is the maximum difference in the ranks allotted by the two countries to any of the five traits. The following table indicates the rank order of the five traits for each country.

| | Countries | | | | |
|---|---|---|---|---|---|
| **Rank** | **India** | **China** | **Japan** | **Malaysia** | **Thailand** |
| **1** | C | N | D | V | V |
| **2** | P | C | N | D | C |
| **3** | N | P | C | P | N |
| **4** | V | D | V | C | P |
| **5** | D | V | P | N | D |

Which amongst the following countries is most dissimilar to India?

A. China B. Japan C. Malaysia D. Thailand

## 2.18.79 Logic Puzzles: CAT 2004 | Question: 21 top

The below question is followed by two statements, A and B. Answer the question using the following instructions.

Choose 1 if the question can be answered by using one of the statements alone but not by using the other statement alone.

Choose 2 if the question can be answered by using either of the statements alone

Choose 3 if the question can be answered by using both statements together but not by either statement alone.

Choose 4 if the question can be answered on the basis of two statements.

Ravi spent less than Rs. 75 to buy one kilogram of each of potato, onion, and gourd. Which one of these vegetables bought was the costliest?

A. 2 kg of potato and 1 kg of gourd cost less than 1 kg of potato and 2 kg of gourd.
B. 1 kg potato and 2 kg onion together cost the same as 1 kg onion and 2 kg gourd.

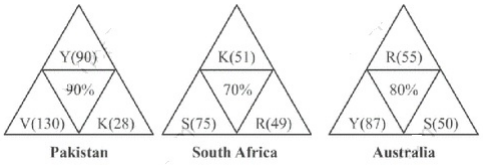
## 2.18.85 Logic Puzzles: CAT 2004 | Question: 27 top

**Answer the questions based on the information given below:**

Coach John sat with the score cards of Indian players from the 3 games in a one day cricket tournament where the same set of players played for India and all the major batsman got out. John summarized the batting performance through 3 diagrams, one for each game. In each diagram, the three outer triangles communicate the number of runs scored by the three top scorers from India, where K, R, S, V, and Y represent Kaif, Rahul, Saurav, Virender and Yuvraj respectively. The middle diagram in each triangle denotes the percentage of total score that was scored by the top 3 Indian scorers in that game. No two players scored the same number of runs in the same game. John also calculated two batting indices for each player based on his scores in the tournament; the R-index of a batsman is the difference between his highest and lowest scores in the 3 games while the M-index is the middle number, if scores are arranged in a non-increasing order.



Which of the players had the best M-index from the tournament?

A. Rahul B. Saurav C. Virender D. Yuvraj

## 2.18.89 Logic Puzzles: CAT 2004 | Question: 31 top

**Answer the questions based on the information given below:**

Twenty one participants from four continents (Africa, Americas, Australia, and Europe) attended a United Nations conference. Each participant was an expert in one of four fields, labour, health, population studies, and refugee relocation. The following five facts about the participants are given:

- The number of labour experts in the camp was exactly half the number of experts in each of the other three categories.
- Africa did not send any labour expert. Otherwise, every continent, including Africa, sent at least one expert for each category.
- None of the continents sent more than three experts in any category.
- If there had been one less Australian expert, then the Americas would have had twice as many experts as each of the other continents.
- Mike and Alfanso are leading experts of population studies who attended the conference. They are from Australia.

Which of the following numbers cannot be determined from the information given?

A. Number of labour experts from Americas
B. Number of health experts from Europe.
C. Number of health experts from Australia

D. Number of experts in refugee relocation from Africa

cat2004 logical-reasoning logic-puzzles

## 2.18.90 Logic Puzzles: CAT 2004 | Question: 32 top

**Answer the questions based on the information given below:**

Twenty one participants from four continents (Africa, Americas, Australia, and Europe) attended a United Nations conference. Each participant was an expert in one of four fields, labour, health, population studies, and refugee relocation. The following five facts about the participants are given:

- The number of labour experts in the camp was exactly half the number of experts in each of the other three categories.
- Africa did not send any labour expert. Otherwise, every continent, including Africa, sent at least one expert for each category.
- None of the continents sent more than three experts in any category.
- If there had been one less Australian expert, then the Americas would have had twice as many experts as each of the other continents.
- Mike and Alfanso are leading experts of population studies who attended the conference. They are from Australia.

Which of the following combinations is not possible?

A. 2 experts in population studies from Americas and 2 experts from Africa attended the conference.
B. 2 experts in population studies from Americas and 1 expert from Africa attended the conference.
C. 2 experts in refugee relocation from Americas and 1 expert from Africa attended the conference.
D. Africa and Americas each had 1 expert in population studies attending the conference.

## 2.18.93 Logic Puzzles: CAT 2004 | Question: 35 top

**Answer the questions based on the information given below:**

The year was 2006. All six teams in Pool A of World Cup Hockey, play each other exactly once. Each win earns a team 3 points, a draw earns one point and a loss earns zero points. The two teams with the highest points qualify for the semi-finals. In case of a tie, the team with the highest goal difference (Goal For – Goal Against) qualifies.

In the opening match, Spain lost to Germany. After the second round (after each team played two matches), the pool table looked as shown below:

| Pool A | | | | | | | |
|---|---|---|---|---|---|---|---|
| **Teams** | **Games Played** | **Won** | **Drawn** | **Lost** | **Goals For** | **Goals Against** | **Points** |
| **Germany** | 2 | 2 | 0 | 0 | 3 | 1 | 6 |
| **Argentina** | 2 | 2 | 0 | 0 | 2 | 0 | 6 |
| **Spain** | 2 | 1 | 0 | 1 | 5 | 2 | 3 |
| **Pakistan** | 2 | 1 | 0 | 1 | 2 | 1 | 3 |
| **New Zealand** | 2 | 0 | 0 | 2 | 1 | 6 | 0 |
| **South Africa** | 2 | 0 | 0 | 2 | 1 | 4 | 0 |

In the third round, Spain Played Pakistan, Argentina played Germany, and New Zealand played South Africa. All third round matches were drawn. The following are some results from the fourth and fifth round matches.

- Spain won both the fourth and fifth round matches.
- Both Argentina and Germany won their fifth round matches by 3 goals to 0.
- Pakistan won both the fourth and fifth round matches by 1 goal to 0.

Which one of the following statements is true about matches played in the first two rounds?

A. Pakistan beat South Africa by 2 goals to 1
B. Argentina beat Pakistan by 1 goal to 0.
C. Germany beat Pakistan by 2 goals to 1.
D. Germany beat Spain by 2 goals to 1.

cat2004 logical-reasoning logic-puzzles

## 2.18.94 Logic Puzzles: CAT 2004 | Question: 36 top

**Answer the questions based on the information given below:**

The year was 2006. All six teams in Pool A of World Cup Hockey, play each other exactly once. Each win earns a team 3 points, a draw earns one point and a loss earns zero points. The two teams with the highest points qualify for the semi-finals. In case of a tie, the team with the highest goal difference (Goal For – Goal Against) qualifies.

In the opening match, Spain lost to Germany. After the second round (after each team played two matches), the pool table looked as shown below:

| Pool A | | | | | | | |
|---|---|---|---|---|---|---|---|
| **Teams** | **Games Played** | **Won** | **Drawn** | **Lost** | **Goals For** | **Goals Against** | **Points** |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| **Germany** | 2 | 2 | 0 | 0 | 3 | 1 | 6 |
| **Argentina** | 2 | 2 | 0 | 0 | 2 | 0 | 6 |
| **Spain** | 2 | 1 | 0 | 1 | 5 | 2 | 3 |
| **Pakistan** | 2 | 1 | 0 | 1 | 2 | 1 | 3 |
| **New Zealand** | 2 | 0 | 0 | 2 | 1 | 6 | 0 |
| **South Africa** | 2 | 0 | 0 | 2 | 1 | 4 | 0 |

In the third round, Spain Played Pakistan, Argentina played Germany, and New Zealand played South Africa. All third round matches were drawn. The following are some results from the fourth and fifth round matches.

| **Pakistan** | 2 | 1 | 0 | 1 | 2 | 1 | 3 |
| **New Zealand** | 2 | 0 | 0 | 2 | 1 | 6 | 0 |
| **South Africa** | 2 | 0 | 0 | 2 | 1 | 4 | 0 |

In the third round, Spain Played Pakistan, Argentina played Germany, and New Zealand played South Africa. All third round matches were drawn. The following are some results from the fourth and fifth round matches.

- Spain won both the fourth and fifth round matches.
- Both Argentina and Germany won their fifth round matches by 3 goals to 0.
- Pakistan won both the fourth and fifth round matches by 1 goal to 0.

Which team finished at the top of the pool after five rounds of matches?

A. Argentina
B. Germany
C. Spain
D. Cannot be determined

cat2004 logical-reasoning logic-puzzles

## 2.18.97 Logic Puzzles: CAT 2005 | Question: 75 top

**Answer the following question based on the information given below:**

Venkat, a stockbroker, invested a part of his money in the stock market of four companies – A, B, C and D. Each of these companies belonged to different industries, viz., Cement, Information Technolog (IT), Auto, and Steel in no particular order. At the time of investment, the price of each stock was Rs. 100. Venkat purchased only stock of each of these companies. He was expecting returns of $20\%, 10\%, 30\%,$ and $40\%$ from the stock of companies A, B, C and D respectively. Returns arc defined as change in the value of the stock after one year, expressed as a percentage of initial value. During the year, two of these companies announced extraordinarily good results. One of these two companies belonged to the cement or the It industry, while the other belonged to the either the Steel or the Auto industry. As a result, the returns on the stock of thse two companies were higher than the initially expected returns. For the company belonging to the Cement or the IT industry with extraordinarily good results, the returns were twice that of the initially expected results. For the company belonging to the Steel or Auto industry, the returns on announcement of extraordinarily good results were only one and half times of that of the initially expected returns. For remaining two companies, which did not announce extraordinarily good results, the returns realized during the year were the same as initially expected.

What is the minimum average return Venkat would have earned during the year?

A. $30\%$
B. $31.25\%$
C. $32.5\%$
D. Cannot be determined

cat2005 logical-reasoning logic-puzzles

## 2.18.98 Logic Puzzles: CAT 2005 | Question: 76 top

**Answer the following question based on the information given below:**

Venkat, a stockbroker, invested a part of his money in the stock market of four companies – A, B, C and D. Each of these companies belonged to different industries, viz., Cement, Information Technolog (IT), Auto, and Steel in no particular order. At the time of investment, the price of each stock was Rs. 100. Venkat purchased only stock of each of these companies. He was expecting returns of $20\%, 10\%, 30\%,$ and $40\%$ from the stock of companies A, B, C and D respectively. Returns arc defined as change in the value of the stock after one year, expressed as a percentage of initial value. During the year, two of these companies announced extraordinarily good results. One of these two companies belonged to the cement or the It

industry, while the other belonged to the either the Steel or the Auto industry. As a result, the returns on the stock of thse two companies were higher than the initially expected returns. For the company belonging to the Cement or the IT industry with extraordinarily good results, the returns were twice that of the initially expected results. For the company belonging to the Steel or Auto industry, the returns on announcement of extraordinarily good results were only one and half times of that of the initially expected returns. For remaining two companies, which did not announce extraordinarily good results, the returns realized during the year were the same as initially expected.

If Venkat earned a $35\%$ return on average during the year, then which of these statements would necessarily be true?

I. Company A belonged to either Auto or to Steel industry
II. Company B did not announce extraordinarily good results.
III. Company A announced extraordinarily good results.
IV. Company D did not announce extraordinarily good results.

A. I and II only B. II and III only C. I and IV only D. II and IV only

## 2.18.99 Logic Puzzles: CAT 2005 | Question: 77 top

**Answer the following question based on the information given below:**

Venkat, a stockbroker, invested a part of his money in the stock market of four companies – A, B, C and D. Each of these companies belonged to different industries, viz., Cement, Information Technolog (IT), Auto, and Steel in no particular order. At the time of investment, the price of each stock was Rs. $100$. Venkat purchased only stock of each of these companies. He was expecting returns of $20\%, 10\%, 30\%,$ and $40\%$ from the stock of companies A, B, C and D respectively. Returns arc defined as change in the value of the stock after one year, expressed as a percentage of initial value. During the year, two of these companies announced extraordinarily good results. One of these two companies belonged to the cement or the It industry, while the other belonged to the either the Steel or the Auto industry. As a result, the returns on the stock of thse two companies were higher than the initially expected returns. For the company belonging to the Cement or the IT industry with extraordinarily good results, the returns were twice that of the initially expected results. For the company belonging to the Steel or Auto industry, the returns on announcement of extraordinarily good results were only one and half times of that of the initially expected returns. For remaining two companies, which did not announce extraordinarily good results, the returns realized during the year were the same as initially expected.

If Venkat earned a $38.75\%$ return on average during the year, then which of these statements would necessarily be true?

I. Company C belonged to either Auto or to Steel industry
II. Company D belonged to either Auto or to Steel industry
III. Company A announced extraordinarily good results.
IV. Company B did not announce extraordinarily good results.

A. I and II only B. II and III only C. I and IV only D. II and IV only

## 2.18.100 Logic Puzzles: CAT 2005 | Question: 78 top

**Answer the following question based on the information given below:**

Venkat, a stockbroker, invested a part of his money in the stock market of four companies – A, B, C and D. Each of these companies belonged to different industries, viz., Cement, Information Technolog (IT), Auto, and Steel in no particular order. At the time of investment, the price of each stock was Rs. $100$. Venkat purchased only stock of each of these companies. He was expecting returns of $20\%, 10\%, 30\%,$ and $40\%$ from the stock of companies A, B, C and D respectively. Returns arc defined as change in the value of the stock after one year, expressed as a percentage of initial value. During the year, two of these companies announced extraordinarily good results. One of these two companies belonged to the cement or the It industry, while the other belonged to the either the Steel or the Auto industry. As a result, the returns on the stock of thse two companies were higher than the initially expected returns. For the company belonging to the Cement or the IT industry with extraordinarily good results, the returns were twice that of the initially expected results. For the company belonging to the Steel or Auto industry, the returns on announcement of extraordinarily good results were only one and half times of that of the initially expected returns. For remaining two companies, which did not announce extraordinarily good results, the returns realized during the year were the same as initially expected.

If Company belonged to the Cement or IT industry and did announce extraordinarily good results, then which of these statements would necessarily be true?

I. Venkat earned not more than $36.25\%$ return on average.
II. Venkat earned not less than $33.75\%$ return on average.
III. If Venkat earned $33.75\%$ return on average, Company A announced extraordinarily good results.
IV. If Venkat earned $33.75\%$ return on average, Company B belonged to either Auto or to Steel industry

A. I and II only B. II and IV only C. II and III only D. III and IV only

## 2.18.101 Logic Puzzles: CAT 2005 | Question: 79 top

**Answer the following questions based on the information given below:**

The year is 2089. Beijing, London, New York and Paris are in contention to host the 2096 Olympics. The eventual winner is determined through several rounds of voting by members of the IOC with each member representing a different city. All four cities in contention are also represented in IOC.

- In any round of voting, the city receiving the lowest number of votes in that round gets eliminated. The survivor after the last round of voting gets to host the event.
- A member is allowed to east votes for at most two different cities in all rounds of voting combined. (Hence, a member becomes ineligible to cast vote in a given round if both the cities (s)he voted for in earlier rounds are out of contention in that round of voting).
- A member is also ineligible to cast a vote in a round of the city (s)he represent is in contention in that round of voting.
- As long as a member is eligible, (s)he must vote and vote for only one candidate city in any round of voting.
- The following incomplete table shows the information of cities that received the maximum and minimum votes in different rounds, the number of votes cast in their favour, and the total votes that were cast in those rounds.

| Round | Total votes cast | Maximum votes cast | | Eliminated | |
|---|---|---|---|---|---|
| | | City | No. of votes | City | No. of votes |
| 1 | | London | 30 | New York | 12 |
| 2 | 83 | Paris | 32 | Beijing | 21 |
| 3 | 75 | | | | |

It is also known that:

- All those who voted for London and Paris in round 1, continued to vote for the same cities in subsequent rounds as long as cities were in contention. 75% of those who voted for Beijing in round 1, voted for Beijing in round 2 as well.
- Those who voted for New York and Paris in round 1, voted either for Beijing or Paris in round 2.
- The difference in votes cast for the two contenting cities in the last round was 1.
- 50% of those who voted for Beijing in round 1, voted for Paris in round 3.

What percentage of members from among those who voted for New York in round 1, voted for Beijing in round 2?

A. 33.33 B. 50 C. 66.67 D. 75

cat2005 logical-reasoning logic-puzzles

## 2.18.102 Logic Puzzles: CAT 2005 | Question: 80 top

**Answer the following questions based on the information given below:**

The year is 2089. Beijing, London, New York and Paris are in contention to host the 2096 Olympics. The eventual winner is determined through several rounds of voting by members of the IOC with each member representing a different city. All four cities in contention are also represented in IOC.

- In any round of voting, the city receiving the lowest number of votes in that round gets eliminated. The survivor after the last round of voting gets to host the event.

- A member is also ineligible to cast a vote in a round of the city (s)he represent is in contention in that round of voting.

- As long as a member is eligible, (s)he must vote and vote for only one candidate city in any round of voting.
- The following incomplete table shows the information of cities that received the maximum and minimum votes in different rounds, the number of votes cast in their favour, and the total votes that were cast in those rounds.

| Round | Total votes cast | Maximum votes cast | | Eliminated | |
|---|---|---|---|---|---|
| | | City | No. of votes | City | No. of votes |
| 1 | | London | 30 | New York | 12 |
| 2 | 83 | Paris | 32 | Beijing | 21 |
| 3 | 75 | | | | |

It is also known that:

- All those who voted for London and Paris in round 1, continued to vote for the same cities in subsequent rounds as long as cities were in contention. 75% of those who voted for Beijing in round 1, voted for Beijing in round 2 as well.
- Those who voted for New York and Paris in round 1, voted either for Beijing or Paris in round 2.
- The difference in votes cast for the two contenting cities in the last round was 1.
- 50% of those who voted for Beijing in round 1, voted for Paris in round 3.

Which of the following statements must be true?

a. IOC member from New York must have voted for Paris in round 2.
b. IOC member from Beijing voted for London in round 3.

A. Only a
B. Only b
C. Both a and b
D. Neither A nor B

cat2005 logical-reasoning logic-puzzles

## 2.18.105 Logic Puzzles: CAT 2005 | Question: 83 top

**Answer the following question based on the information given below:**

The table below presents the revenue (in million rupees) of four firms in three states. These firms, Honest Ltd., Aggressive Ltd., Truthful Ltd., and Profitable Ltd., are disguised in the table as A, B, C and D in no particular order.

| States | Firm A | Firm B | Firm C | Firm D |
|---|---|---|---|---|
| UP | 49 | 82 | 80 | 55 |
| Bihar | 69 | 72 | 70 | 65 |
| MP | 72 | 63 | 72 | 65 |

Further, it is known that,

- In the state of MP, Truthful Ltd, has the highest market share.
- Aggressive Ltd's aggregate revenue differs from Honest Ltd's by Rs. 5 million.

What can be said regarding the following two statements? Statement 1 : Profitable Ltd has the lowest share in MP market. Statement 2 : Honest Ltd's total revenue is more than Profitable Ltd.,

A. If Statement 1 is true then Statement 2 is necessarily true.
B. If Statement 1 is true then Statement 2 is necessarily false.
C. Both Statement 1 and Statement 2 are true.
D. Neither Statement 1 nor Statement 2 is true.

cat2005 logical-reasoning logic-puzzles

## 2.18.106 Logic Puzzles: CAT 2005 | Question: 84 top

**Answer the following question based on the information given below:**

The table below presents the revenue (in million rupees) of four firms in three states. These firms, Honest Ltd., Aggressive Ltd., Truthful Ltd., and Profitable Ltd., are disguised in the table as A, B, C and D in no particular order.

| States | Firm A | Firm B | Firm C | Firm D |
|---|---|---|---|---|
| UP | 49 | 82 | 80 | 55 |
| Bihar | 69 | 72 | 70 | 65 |
| MP | 72 | 63 | 72 | 65 |

Further, it is known that,

- In the state of MP, Truthful Ltd, has the highest market share.
- Aggressive Ltd's aggregate revenue differs from Honest Ltd's by Rs. 5 million.

What can be said regarding the following two statements? Statement 1 : Aggressive Ltd's lowest revenues are from MP. Statement 2 : Honest Ltd's lowest revenues are from Bihar.

A. If Statement 1 is true then Statement 2 is necessarily false.
B. If Statement 1 is false then Statement 2 is necessarily true.
C. If Statement 1 is true then Statement 2 is necessarily true.
D. None of the above.

| UP | 49 | 82 | 80 | 55 |
| Bihar | 69 | 72 | 70 | 65 |
| MP | 72 | 63 | 72 | 65 |

Further, it is known that,

- In the state of MP, Truthful Ltd, has the highest market share.
- Aggressive Ltd's aggregate revenue differs from Honest Ltd's by Rs. 5 million.

If Profitable Ltd's lowest revenue is from UP, then which of the following is true?

A. Truthful Ltd's lowest revenue is from MP
B. Truthful Ltd's lowest revenue is from Bihar
C. Truthful Ltd's lowest revenue is from UP
D. No definite conclusion is possible

cat2005 logical-reasoning logic-puzzles

## 2.18.109 Logic Puzzles: CAT 2005 | Question: 87 top

**Answer the following questions based on the information given below:**

Help Distress (HD) is an NGO involved in providing assistance to people suffering from natural disasters. Currently, it has 37 volunteers. They are involved in three projects: Tsunami Relief (TR) in Tamilnadu, Floor Relief in Maharastra (FR) and Earthquake Relief (ER) in Gujarat. Each volunteer working with Help Distress has to be involved at least in one project.

- A maximum number of volunteers are involved in FR project. Among them, the number of volunteers involved in FR project alone is equal to the volunteers having additional involvement in the ER project.
- Among them, the number of volunteers involved in ER project alone is double the number of volunteers involved in all three projects.
- 17 volunteers are involved in TR project.
- Among them, the number of volunteers involved in TR project alone is one less than the number of volunteers involved in the ER project alone.
- Ten volunteers involved in TR project are also involved in at least one more project.

Based on the information given above, the minimum number of volunteers involved in both FR and TR projects, but not in the ER project is:

A. 1 B. 3 C. 4 D. 5

cat2005 logical-reasoning logic-puzzles

## 2.18.110 Logic Puzzles: CAT 2005 | Question: 88 top

**Answer the following questions based on the information given below:**

Help Distress (HD) is an NGO involved in providing assistance to people suffering from natural disasters. Currently, it has 37 volunteers. They are involved in three projects: Tsunami Relief (TR) in Tamilnadu, Floor Relief in Maharastra (FR) and Earthquake Relief (ER) in Gujarat. Each volunteer working with Help Distress has to be involved at least in one project.

- A maximum number of volunteers are involved in FR project. Among them, the number of volunteers involved in FR project alone is equal to the volunteers having additional involvement in the ER project.
- Among them, the number of volunteers involved in ER project alone is double the number of volunteers involved in all three projects.
- 17 volunteers are involved in TR project.
- Among them, the number of volunteers involved in TR project alone is one less than the number of volunteers involved in the ER project alone.
- Ten volunteers involved in TR project are also involved in at least one more project.

Which of the following information would enable to find the exact number of volunteers involved in various projects?

A. Twenty volunteers are involved in FR.
B. Four volunteers are involved in all the three projects.
C. Twenty three volunteers are involved in exactly one project.
D. No need for any additional information.

cat2005 logical-reasoning logic-puzzles

## 2.18.111 Logic Puzzles: CAT 2005 | Question: 89 top

**Answer the following questions based on the information given below:**

Help Distress (HD) is an NGO involved in providing assistance to people suffering from natural disasters. Currently, it has 37 volunteers. They are involved in three projects: Tsunami Relief (TR) in Tamilnadu, Floor Relief in Maharastra (FR) and Earthquake Relief (ER) in Gujarat. Each volunteer working with Help Distress has to be involved at least in one project.

- A maximum number of volunteers are involved in FR project. Among them, the number of volunteers involved in FR project alone is equal to the volunteers having additional involvement in the ER project.
- Among them, the number of volunteers involved in ER project alone is double the number of volunteers involved in all three projects.
- 17 volunteers are involved in TR project.
- Among them, the number of volunteers involved in TR project alone is one less than the number of volunteers involved in the ER project alone.
- Ten volunteers involved in TR project are also involved in at least one more project.

After some time, the volunteers who were involved in all three projects were asked to withdraw from one project. As a result, one of the volunteers opted out of the TR project, and one opted out of the ER project, while the remaining ones involved in all

three projects, opted out of the FR project. Which of the following statements, then, necessarily follows?

A. The lowest number of volunteers is now in TR project.
B. More volunteers are now in FR project as compared to ER project.
C. More volunteers are now in TR project as compared to ER project.
D. None of the above.

cat2005 logical-reasoning logic-puzzles

## 2.18.112 Logic Puzzles: CAT 2005 | Question: 90 top

**Answer the following questions based on the information given below:**

Help Distress (HD) is an NGO involved in providing assistance to people suffering from natural disasters. Currently, it has $37$ volunteers. They are involved in three projects: Tsunami Relief (TR) in Tamilnadu, Floor Relief in Maharastra (FR) and Earthquake Relief (ER) in Gujarat. Each volunteer working with Help Distress has to be involved at least in one project.

- A maximum number of volunteers are involved in FR project. Among them, the number of volunteers involved in FR project alone is equal to the volunteers having additional involvement in the ER project.
- Among them, the number of volunteers involved in ER project alone is double the number of volunteers involved in all three projects.
- $17$ volunteers are involved in TR project.
- Among them, the number of volunteers involved in TR project alone is one less than the number of volunteers involved in the ER project alone.
- Ten volunteers involved in TR project are also involved in at least one more project.

After withdrawal of volunteers, as indicated in the previous question (question $\#89$), some new volunteers joined the NGO. Each one of them was allotted only one project in a manner such that, the number of volunteers working in one project alone for each of the three projects became identical. At that point, it was also found that the number of volunteers involved in FR and ER projects was the same as the number of volunteers involved in TR and ER projects. Which of the projects now has the highest number of volunteers?

A. ER
B. TR
C. FR
D. Cannot be determined

cat2005 logical-reasoning logic-puzzles

## 2.18.113 Logic Puzzles: CAT 2006 | Question: 10 top

**Answer the questions based on the information given below:**

Mathematicians are assigned a number called Erdos number, (named after the famous mathematician, Paul Erdos). Only Paul Erdos himself has an Erdos number of zero. Any mathematician who has written a research paper with Erdos has an Erdos number of $1$. For other mathematicians, the calculation of his/her Erdos number is illustrated below:

Suppose that a mathematician X has co-authored papers with several other mathematicians. From among them, mathematician Y has the Smallest Erdos number. Let the Erdos number of Y be $y$. Then X has the Erdos number of $y+1$. Hence any mathematician with no co-authorship chain connected to Erdos has an Erdos number of infinity.

- In a seven day long mini-conference organized in memory of Paul Erdos, a close group of eight mathematicians, call them A, B, C, D, E, F, G and H, discussed some research problems. At eh beginning of the conference, A was the only participant who had an infinite Erdos number. Nobody had an Erdos number less than that of F.
- On the third day of the conference F co-authored a paper jointly with A and C. This reduced the average Erdos number of the group of eight mathematicians to $3$. The Erdos number of B, D, E, G and H remained unchanged with the writing of this paper. Further, no other co-authorship among any three members would have reduced the average Erdos number of the group of eight to as low as $3$.
- At the end of the third day, five members of this group had identical Erdos numbers while the other three had Erdos numbers distinct from each other.
- On the fifth day, E co-authored a paper with F which reduced the group's average Erdos number by $0.5$. The Erdos numbers of the remaining six were unchanged with the writing of this paper.
- No other paper was written during the conference.

How many participants had the same Erdos number at the beginning of the conference

A. $2$
B. $3$
C. $4$
D. $5$
E. cannot be determined

cat2006 logical-reasoning logic-puzzles

## 2.18.114 Logic Puzzles: CAT 2006 | Question: 11 top

**Answer the question based on the information given below:**

Two traders, Chetan and Michael, were involved in the buying and selling of MCS shares over five trading days. At the beginning of the first day, the MCS share was prices at Rs 100, while at the end of the fifth day it was priced at Rs 110. At the end of each day, the MCS share price either went up by Rs 10, or else, it came down by Rs 10. Both Chetan and Michael took buying and selling decisions at the end of each trading day.

The beginning price of MCS share on a given day was the same as the ending price of the previous day.

Chetan and Michael started with the same number of shares and amount of cash, and had enough of both. Below are some additional facts about how Chetan and Michael traded over the five trading days.

- Each day if the price went up, Chetan sold 10 shares of MCS at the closing price. On the other hand, each day if the price went down, he bought 10 shares at the closing price.
- If on any day, the closing price was above Rs 110, then Michael sold 10 shares of MCS, while if it was below Rs 90, he bought 10 shares, all at the closing price.

If Chetan sold 10 shares of MCS on three consecutive days, while Michael sold only once during the five days, what was the price of MCS at the end of day 3?

A. Rs 90 B. Rs 100 C. Rs 110 D. Rs 120 E. Rs 130

cat2006 logical-reasoning logic-puzzles

Answer key

## 2.18.115 Logic Puzzles: CAT 2006 | Question: 12 top

**Answer the question based on the information given below:**

Two traders, Chetan and Michael, were involved in the buying and selling of MCS shares over five trading days. At the beginning of the first day, the MCS share was prices at Rs 100, while at the end of the fifth day it was priced at Rs 110. At the end of each day, the MCS share price either went up by Rs 10, or else, it came down by Rs 10. Both Chetan and Michael took buying and selling decisions at the end of each trading day.

The beginning price of MCS share on a given day was the same as the ending price of the previous day.

Chetan and Michael started with the same number of shares and amount of cash, and had enough of both. Below are some additional facts about how Chetan and Michael traded over the five trading days.

- Each day if the price went up, Chetan sold 10 shares of MCS at the closing price. On the other hand, each day if the price went down, he bought 10 shares at the closing price.
- If on any day, the closing price was above Rs 110, then Michael sold 10 shares of MCS, while if it was below Rs 90, he bought 10 shares, all at the closing price.

If Michael ended up with Rs 100 less cash than Chetan at the end of day 5, what was the difference in number of shares possessed by Michael and Chetan ( at the end of day 5)?

A. Michael had 10 less shares than Chetan
B. Michael had 10 more shares than Chetan
C. Chetan had 10 more shares than Michael
D. Chetan had 20 more shares than Michael
E. Both had same number of shares

cat2006 logical-reasoning logic-puzzles

## 2.18.116 Logic Puzzles: CAT 2006 | Question: 13 top

**Answer the question based on the information given below:**

Two traders, Chetan and Michael, were involved in the buying and selling of MCS shares over five trading days. At the beginning of the first day, the MCS share was prices at Rs 100, while at the end of the fifth day it was priced at Rs 110. At the end of each day, the MCS share price either went up by Rs 10, or else, it came down by Rs 10. Both Chetan and Michael took buying and selling decisions at the end of each trading day.

The beginning price of MCS share on a given day was the same as the ending price of the previous day.

Chetan and Michael started with the same number of shares and amount of cash, and had enough of both. Below are some additional facts about how Chetan and Michael traded over the five trading days.

- Each day if the price went up, Chetan sold 10 shares of MCS at the closing price. On the other hand, each day if the price went down, he bought 10 shares at the closing price.

- If on any day, the closing price was above Rs 110, then Michael sold 10 shares of MCS, while if it was below Rs 90, he bought 10 shares, all at the closing price.

If Chetan ended up with Rs 1300 more cash than Michael at the end of day 5, what was the price of MCS share at the end of day 4?

A. Rs 90
B. Rs 100
C. Rs 110
D. Rs 120
E. Not uniquely determinable

## 2.18.117 Logic Puzzles: CAT 2006 | Question: 14 top

**Answer the question based on the information given below:**

Two traders, Chetan and Michael, were involved in the buying and selling of MCS shares over five trading days. At the beginning of the first day, the MCS share was prices at Rs 100, while at the end of the fifth day it was priced at Rs 110. At the end of each day, the MCS share price either went up by Rs 10, or else, it came down by Rs 10. Both Chetan and Michael took buying and selling decisions at the end of each trading day.

The beginning price of MCS share on a given day was the same as the ending price of the previous day.

Chetan and Michael started with the same number of shares and amount of cash, and had enough of both. Below are some additional facts about how Chetan and Michael traded over the five trading days.

- Each day if the price went up, Chetan sold 10 shares of MCS at the closing price. On the other hand, each day if the price went down, he bought 10 shares at the closing price.
- If on any day, the closing price was above Rs 110, then Michael sold 10 shares of MCS, while if it was below Rs 90, he bought 10 shares, all at the closing price.

What could have been the maximum possible increase in combined cash balance of Chetan and Michael at the end of the fifth day?

A. Rs 3700
B. Rs 4000
C. Rs 4700
D. Rs 5000
E. Rs 6000

cat2006 logical-reasoning logic-puzzles

## 2.18.118 Logic Puzzles: CAT 2006 | Question: 15 top

**Answer the question based on the information given below:**

Two traders, Chetan and Michael, were involved in the buying and selling of MCS shares over five trading days. At the beginning of the first day, the MCS share was prices at Rs 100, while at the end of the fifth day it was priced at Rs 110. At the end of each day, the MCS share price either went up by Rs 10, or else, it came down by Rs 10. Both Chetan and Michael took buying and selling decisions at the end of each trading day.

The beginning price of MCS share on a given day was the same as the ending price of the previous day.

Chetan and Michael started with the same number of shares and amount of cash, and had enough of both. Below are some additional facts about how Chetan and Michael traded over the five trading days.

- Each day if the price went up, Chetan sold 10 shares of MCS at the closing price. On the other hand, each day if the price went down, he bought 10 shares at the closing price.
- If on any day, the closing price was above Rs 110, then Michael sold 10 shares of MCS, while if it was below Rs 90, he bought 10 shares, all at the closing price.

If Michael ended up with 20 more shares than Chetan at the end of day 5, what was the price of the share at the end of day 3?

A. Rs 90
B. Rs 100
C. Rs 110
D. Rs 120
E. Rs 130

cat2006 logical-reasoning logic-puzzles

## 2.18.119 Logic Puzzles: CAT 2006 | Question: 21 top

**Answer the questions based on the information given below:**

K, L, M, N, P, Q, R, S, U and W are the only ten members in the department. There is a proposal to form a team from within the members of the department, subject to the following conditions.

- A team must include exactly one among P, R and S.
- A team must include either M or Q, but not both.
- If a team includes K, then it must also include L and vice versa.

- If a team includes one among S, U and W, then it must also include the other two.
- L and N cannot be the members of the same team.
- L and U cannot be the members of the same team.
- The size of the team is defined as the number of members in the team.

What could be the size of the team that includes K?

A. 2 or 3 B. 2 or 4 C. 3 or 4 D. only 2 E. only 4

## 2.18.124 Logic Puzzles: CAT 2006 | Question: 26 top

**The following question has a set of sequentially ordered statements. Each statement can be classified as one of the following:**

1. Facts, which deals with the pieces of information that one has heard, seen or read and which are open to discovery or verification (the answer option indicates such a statement with an 'F').
2. Inferences, which are conclusions drawn about the unknown, on the basis of the known (the answer option indicates such a statement with an 'I').
3. Judgements, which are opinions that imply approval or disapproval of persons, objects, situations and occurrences in the past, the present or the future (the answer option indicates such a statement with an 'J')

Select the option that best describes the set of statements.

I. So much of our day-to-day seems to be on getting things done, trudging our way through the task of living – it can feel like a treadmill that gets you nowhere; where is the childlike joy?
II. We are not doing the things that make us happy; that which brings us joy; the things we cannot wait to do because we enjoy them so much.
III. This is the stuff that the joyful living is made of –identifying your calling and committing yourself wholeheartedly to it.
IV. When this happens, each moment becomes a celebration for you; there is a rush of energy that comes with feeling completely immersed in doing what you love most.

A. IIIJ B. IFIJ C. JFJJ D. JJJJ E. JFII

cat2006 logical-reasoning logic-puzzles

## 2.18.125 Logic Puzzles: CAT 2006 | Question: 27 top

**The following question has a set of sequentially ordered statements. Each statement can be classified as one of the following:**

1. Facts, which deals with the pieces of information that one has heard, seen or read and which are open to discovery or verification (the answer option indicates such a statement with an 'F').
2. Inferences, which are conclusions drawn about the unknown, on the basis of the known (the answer option indicates such a statement with an 'I').
3. Judgements, which are opinions that imply approval or disapproval of persons, objects, situations and occurrences in the past, the present or the future (the answer option indicates such a statement with an 'J')

Select the option that best describes the set of statements.

A. Given the poor quality B. [illegible]

A. JBIJJCIJ IDIJ IEFJJFII

cat2006 logical-reasoning logic-puzzles

## 2.18.126 Logic Puzzles: CAT 2006 | Question: 28 top

**The following question has a set of sequentially ordered statements. Each statement can be classified as one of the following:**

1. Facts, which deals with the pieces of information that one has heard, seen or read and which are open to discovery or verification (the answer option indicates such a statement with an 'F').
2. Inferences, which are conclusions drawn about the unknown, on the basis of the known (the answer option indicates such a statement with an 'I').
3. Judgements, which are opinions that imply approval or disapproval of persons, objects, situations and occurrences in the past, the present or the future (the answer option indicates such a statement with an 'J')

A. According to all statistics, the Indian economy has grown at 8% in the last decade.

A. IBFJJCIJ IDFJIEFIJIFI

cat2006 logical-reasoning logic-puzzles

## 2.18.127 Logic Puzzles: CAT 2006 | Question: 29 top

**The following question has a set of sequentially ordered statements. Each statement can be classified as one of the following:**

1. Facts, which deals with the pieces of information that one has heard, seen or read and which are open to discovery or verification (the answer option indicates such a statement with an 'F').
2. Inferences, which are conclusions drawn about the unknown, on the basis of the known (the answer option indicates such a statement with an 'I').
3. Judgements, which are opinions that imply approval or disapproval of persons, objects, situations and occurrences in the past, the present or the future (the answer option indicates such a statement with an 'J')

A. We should not be hopeless. The child is a miracle. God has not yet given up on humanity. Every baby that is born is living proof that God still wants us to go on.

A. JBIFJCEJJJDIFIEJFJFJI

cat2006 logical-reasoning logic-puzzles

## 2.18.128 Logic Puzzles: CAT 2006 | Question: 30 top

The following question has a set of sequentially ordered statements. Each statement can be classified as one of the following:

1. Facts, which deals with the pieces of information that one has heard, seen or read and which are open to discovery or verification (the answer option indicates such a statement with an 'F').
2. Inferences, which are conclusions drawn about the unknown, on the basis of the known (the answer option indicates such a statement with an 'I').
3. Judgements, which are opinions that imply approval or disapproval of persons, objects, situations and occurrences in the past, the present or the future (the answer option indicates such a statement with an 'J')

I. Inequitable distribution of all kinds of resources is certainly one of the strongest and most sinister sources of conflict.
II. Even without war, we know that conflicts continue to trouble us – they only change in character.
III. Extensive disarmament is the only insurance for our future; imagine the amount of resources that can be released and redeployed.
IV. The economies of industrialized western world derive $20\%$ of their income from the sale of all kinds of arms.

A. IJJI B. JIJF C. IIJF D. JIIF E. IJIF

cat2006 logical-reasoning logic-puzzles

## 2.18.129 Logic Puzzles: CAT 2006 | Question: 6 top

**Answer the questions based on the information given below:**

Mathematicians are assigned a number called Erdos number, (named after the famous mathematician, Paul Erdos). Only Paul Erdos himself has an Erdos number of zero. Any mathematician who has written a research paper with Erdos has an Erdos number of $1$. For other mathematicians, the calculation of his/her Erdos number is illustrated below:

Suppose that a mathematician X has co-authored papers with several other mathematicians. From among them, mathematician Y has the Smallest Erdos number. Let the Erdos number of Y be $y$. Then X has the Erdos number of $y + 1$. Hence any mathematician with no co-authorship chain connected to Erdos has an Erdos number of infinity.

- In a seven day long mini-conference organized in memory of Paul Erdos, a close group of eight mathematicians, call them A, B, C, D, E, F, G and H, discussed some research problems. At eh beginning of the conference, A was the only participant who had an infinite Erdos number. Nobody had an Erdos number less than that of F.
- On the third day of the conference F co-authored a paper jointly with A and C. This reduced the average Erdos number of the group of eight mathematicians to $3$. The Erdos number of B, D, E, G and H remained unchanged with the writing of this paper. Further, no other co-authorship among any three members would have reduced the average Erdos number of the group of eight to as low as $3$.
- At the end of the third day, five members of this group had identical Erdos numbers while the other three had Erdos numbers distinct from each other.
- On the fifth day, E co-authored a paper with F which reduced the group's average Erdos number by $0.5$. The Erdos numbers of the remaining six were unchanged with the writing of this paper.
- No other paper was written during the conference.

The only person having the largest Erdos number at the end of the conference must have had Erdos number (at that time)

A. $5$ B. $7$ C. $9$ D. $14$ E. $15$

cat2006 logical-reasoning logic-puzzles

## 2.18.130 Logic Puzzles: CAT 2006 | Question: 7 top

**Answer the questions based on the information given below:**

## 2.18.133 Logic Puzzles: CAT 2007 | Question: 16 top

**Directions for the below question:**

Each question is followed by two statements A and B. Answer each question using the below instructions.

- Mark $(1)$ if the question can be by using statement A alone but not by using statement B alone.
- Mark $(2)$ if the question can be answered by sing statement B alone but not by using statement A alone.
- Mark $(3)$ if the question can be answered by using both the statements together but not by using either of the statements alone.
- Mark $(4)$ if the question cannot be answered on the basis of the two statements.

The average weight of class of $100$ students is $45$ kg. The class consists of two sections, I and II, each with $50$ students. The average weight $W_1$, of section I is smaller than the average weight, $W_{II}$, of section II. If the heaviest student, say Deepak, of section II is moved to Section I, and the lightest student, say Poonam, of Section I is moved to Section II, then the average weights of the then the average weights of the two sections are switched i.e., the average weight of Section I becomes $W_{II}$ and that of Section II becomes $W_I$. What is the weight of Poonam?

A. $W_{II}-W_I = 1.0$
B. Moving Deepak from Section II to I (without any move from I to II) makes the average weights of the two sections equal.

Answer key

## 2.18.143 Logic Puzzles: CAT 2008 | Question: 15 top

**Direction for the below question:**

Mark (1) if Q can be answered form A alone but not from B alone.

Mark (2) if Q can be answered form B alone but not from A alone.

Mark (3) if Q can be answered form A alone as well as from B alone.

Mark (4) if Q can be answered form A and B together but not from any of them alone.

Mark (5) if Q cannot be answered even form A and B together.

In a single elimination tournament, any players is eliminated with a single loss. The tournament is played in multiple rounds subject to the following rules:

1. If the number of players, say $n$ in any round is even, then the players get grouped in to $n/2$ pairs. The players in each pair play a match against each other and the winner moves on to the next round.
2. If the number of players, say $n$, in any round is odd, then one of them is given a bye, that is he automatically moves on to the next round. The remaining $(n-1)$ players are grouped in to $(n-1)/2$ pairs. The players in each pair play a match against each other and the winner moves on to the next round. No player gets more than one bye in the entire tournament.

Thus, if $n$ is even, then $n/2$ players move on to the next round, while if $n$ is odd, then $(n+1)/2$ players move on to the next round. The process is continued till the final round, which obviously played between two players. The winner in the final round is the champion of the tournament.

What is the number of matches played by the champion?

A. The entry list for the tournament consists of $83$ players.
B. The champion received one bye

cat2008 logical-reasoning logic-puzzles

## 2.18.144 Logic Puzzles: CAT 2008 | Question: 16 top

**Direction for the below question:**

Mark $(1)$ if Q can be answered form A alone but not from B alone.

Mark $(2)$ if Q can be answered form B alone but not from A alone.

Mark $(3)$ if Q can be answered form A alone as well as from B alone.

Mark $(4)$ if Q can be answered form A and B together but not from any of them alone.

Mark $(5)$ if Q cannot be answered even form A and B together.

In a single elimination tournament, any players is eliminated with a single loss. The tournament is played in multiple rounds subject to the following rules:

1. If the number of players, say $n$ in any round is even, then the players get grouped in to $n/2$ pairs. The players in each pair play a match against each other and the winner moves on to the next round.
2. If the number of players, say $n$, in any round is odd, then one of them is given a bye, that is he automatically moves on to the next round. The remaining $(n-1)$ players are grouped in to $(n-1)/2$ pairs. The players in each pair play a match against each other and the winner moves on to the next round. No player gets more than one bye in the entire tournament.

Thus, if $n$ is even, then $n/2$ players move on to the next round, while if $n$ is odd, then $(n+1)/2$ players move on to the next round. The process is continued till the final round, which obviously played between two players. The winner in the final round is the champion of the tournament.

If the number of players, say $n$ in the first round was between $65$ and $128$, then what is the exact value of $n$?

A. Exactly one player received a bye in the entire tournament.
B. One player received a bye while moving on to the fourth round from the third round

## 2.18.145 Logic Puzzles: CAT 2008 | Question: 21 top

**Directions for below question:**

Five horses, Red, White, Grey, Black and Spotted participated in a race, As per the rules of the race, the persons betting on the winning horse get four times the betting amount and those betting on the horse that came in second get thrice of the bet amount, the bet amount is returned to those betting on the horse that came in third and rest lose the bet amount. Raju bets Rs. $3000$, Rs. $2000$ and Rs. $1000$ on Red, White and Black horses respectively and ends up with no profit and no loss.

Which of the following cannot be true?

A. At least two horses finished before Spotted.
B. Red finished last.
C. There were three horses between Black and Spotted
D. There were three horses between White and Red
E. Grey came in second

cat2008 logical-reasoning logic-puzzles

## 2.18.146 Logic Puzzles: CAT 2008 | Question: 22 top

**Directions for below question:**

Five horses, Red, White, Grey, Black and Spotted participated in a race, As per the rules of the race, the persons betting on the winning horse get four times the betting amount and those betting on the horse that came in second get thrice of the bet amount, the bet amount is returned to those betting on the horse that came in third and rest lose the bet amount. Raju bets Rs. 3000, Rs. 2000 and Rs. 1000 on Red, White and Black horses respectively and ends up with no profit and no loss.

Suppose in addition, it is known that Grey came in fourth. Then which of the following cannot be true?

A. Spotted came in first
B. Red finished last
C. White came in second
D. Black came in second
E. There was one horse between Black and White

## 2.18.147 Logic Puzzles: CAT 2008 | Question: 29 top

**Answer the following question based on the information given below.**

Abdul and Bikram and Chetan are three professional traders who trade in shares of a company XYZ Ltd. Abdul follows the strategy of buying at the opening of the day at 10 am and selling the whole lot at the close of the day at 3 pm. Bikram follows the strategy of buying at hourly intervals 10 am, 11 am, 12 noon, 1 pm and 2 pm, and selling the whole lot at the close of the day. Further he buys an equal number of shares in each purchase. Chetan follows a similar pattern as Bikram but his strategy is somewhat different. Chetan's total investment amount is divided equally among his purchases. The profit or loss made by each investor is the difference between the sale value at the close of the day less the investment in purchase. The "return" for each investor is defined as the ratio of the profit or loss to investment amount expressed as a percentage.

Which one of the statements is always true?

A. Abdul will not be the one with minimum return.
B. Return for Chetan will be higher than that of Bikram
C. Return for Chetan cannot be higher than that ofAbdul
D. Return for Bikram will not be higher than that of Abdul
E. none of the above.

cat2008 logical-reasoning logic-puzzles

## 2.18.148 Logic Puzzles: CAT 2008 | Question: 30 top

**Answer the following question based on the information given below.**

Abdul and Bikram and Chetan are three professional traders who trade in shares of a company XYZ Ltd. Abdul follows the strategy of buying at the opening of the day at 10 am and selling the whole lot at the close of the day at 3 pm. Bikram follows the strategy of buying at hourly intervals 10 am, 11 am, 12 noon, 1 pm and 2 pm, and selling the whole lot at the close of the day. Further he buys an equal number of shares in each purchase. Chetan follows a similar pattern as Bikram but his strategy is somewhat different. Chetan's total investment amount is divided equally among his purchases. The profit or loss made by each investor is the difference between the sale value at the close of the day less the investment in purchase. The "return" for each investor is defined as the ratio of the profit or loss to investment amount expressed as a percentage.

On a "boom" day the share price of XYZ Ltd, keeps raising throughout the day and peaks at the close of the day. Which trader got the minimum profit on that day?

A. Bikram
B. Chetan
C. Abdul
D. Abdul and Chetan
E. cannot be determined

cat2008 logical-reasoning logic-puzzles

Answer key

## 2.18.149 Logic Puzzles: CAT 2008 | Question: 31 top

**Answer the following question based on the information given below.**

Abdul and Bikram and Chetan are three professional traders who trade in shares of a company XYZ Ltd. Abdul follows the strategy of buying at the opening of the day at 10 am and selling the whole lot at the close of the day at 3 pm. Bikram follows the strategy of buying at hourly intervals 10 am, 11 am, 12 noon, 1 pm and 2 pm, and selling the whole lot at the close of the day. Further he buys an equal number of shares in each purchase. Chetan follows a similar pattern as Bikram but his strategy is somewhat different. Chetan's total investment amount is divided equally among his purchases. The profit or loss made by each investor is the difference between the sale value at the close of the day less the investment in purchase. The "return" for each investor is defined as the ratio of the profit or loss to investment amount expressed as a percentage.

On a day of fluctuating marketing prices, the share price of XYZ Ltd, ends with a gain i.e., it is higher at the close of the day compared to the opening value. Which trader got the maximum return on that day?

A. Bikram
B. Chetan
C. Abdul
D. Bikram or Chetan
E. cannot be determined

cat2008 logical-reasoning logic-puzzles

## 2.18.150 Logic Puzzles: CAT 2008 | Question: 32 top

**Answer the following question based on the information given below.**

Abdul and Bikram and Chetan are three professional traders who trade in shares of a company XYZ Ltd. Abdul follows the strategy of buying at the opening of the day at 10 am and selling the whole lot at the close of the day at 3 pm. Bikram follows the strategy of buying at hourly intervals 10 am, 11 am, 12 noon, 1 pm and 2 pm, and selling the whole lot at the close of the day. Further he buys an equal number of shares in each purchase. Chetan follows a similar pattern as Bikram but his strategy is somewhat different. Chetan's total investment amount is divided equally among his purchases. The profit or loss made by each investor is the difference between the sale value at the close of the day less the investment in purchase. The "return" for each investor is defined as the ratio of the profit or loss to investment amount expressed as a percentage.

One day, two other traders Dane and Emily joined Abdul and Chetan for trading in the shares of XYZ Ltd. Dane followed a strategy of buying equal number of shares at 10 am, 11 am and 12 noon, and selling the same numbers at 1 pm, 2 pm and 3 pm. Emily on the other hand, followed the strategy of buying shares using all her money at 10 am and selling all of them at 12 noon, and again buying the shares for all the money at 1 pm and again selling all of them at close of the say at 3 pm. At the close of the day the following was observed.

i. Abdul lost money in the transactions.
ii. Both Dane and Emily made profit.
iii. There was an increase in share price during the closing hour compared to the price at 2 pm.
iv. Share price at 12 noon was lower than the opening price

Which of the following is necessarily false?

A. Share price was at its lowest at 2 pm
B. Share price was at its lowest at 11 am
C. Share price at 1 pm was higher than the share price at 2 pm
D. Share price at 1 pm was higher than the share price at 12 pm
E. none of the above

cat2008 logical-reasoning logic-puzzles

## 2.18.151 Logic Puzzles: CAT 2008 | Question: 33 top

**Answer the following question based on the information given below.**

Abdul and Bikram and Chetan are three professional traders who trade in shares of a company XYZ Ltd. Abdul follows the strategy of buying at the opening of the day at 10 am and selling the whole lot at the close of the day at 3 pm. Bikram follows the strategy of buying at hourly intervals 10 am, 11 am, 12 noon, 1 pm and 2 pm, and selling the whole lot at the close of the day. Further he buys an equal number of shares in each purchase. Chetan follows a similar pattern as Bikram but his strategy is somewhat different. Chetan's total investment amount is divided equally among his purchases. The profit or loss made by each investor is the difference between the sale value at the close of the day less the investment in purchase. The "return" for each investor is defined as the ratio of the profit or loss to investment amount expressed as a percentage.

One day, two other traders Dane and Emily joined Abdul and Chetan for trading in the shares of XYZ Ltd. Dane followed a strategy of buying equal number of shares at 10 am, 11 am and 12 noon, and selling the same numbers at 1 pm, 2 pm and 3 pm. Emily on the other hand, followed the strategy of buying shares using all her money at 10 am and selling all of them at 12 noon, and again buying the shares for all the money at 1 pm and again selling all of them at close of the say at 3 pm. At the close of the day the following was observed.

i. Abdul lost money in the transactions.
ii. Both Dane and Emily made profit.
iii. There was an increase in share price during the closing hour compared to the price at 2 pm.
iv. Share price at 12 noon was lower than the opening price

Share price was its highest at

A. 10 am
B. 11 am
C. 12 noon
D. 1 pm

E. cannot be determined

## 2.18.152 Logic Puzzles: CAT 2008 | Question: 38 top

**Answer the following question based on the information given below.**

i. There are three houses on each side of the road
ii. The six house are labeled as P, Q, R, S, T and U.
iii. The houses are of different colours, namely, Red, Blue, Green, Orange, Yellow and White.
iv. The houses are of different heights.
v. T, the tallest house, is exactly opposite to the Red coloured house.
vi. The shortest house is exactly opposite to the Green coloured house.
vii. U, the Orange coloured house, is located between P and S
viii. R, the yellow coloured house, is exactly opposite to P.
ix. Q, the Green coloured house, is exactly opposite to U.
x. P, the white coloured house, is taller than R, but shorter than S and Q.

Which is the second tallest house?

A. P
B. S
C. Q
D. R
E. cannot be determined

Answer key

## 2.18.155 Logic Puzzles: CAT 2008 | Question: 41 top

**Answer the following question based on the information given below.**

In a sport event, six teams (A, B, C, D, E and F) are competing against each other. Matches are scheduled in two stages. Each team plays three matches in Stage-I and two matches in Stage-II. No team plays against the same team more than once in the event. No ties are permitted in any of the matches. The observations after the completion of Stage-I and Stage-II are as given below.

**Stage-I:**

- One team won all the three matches.
- Two teams lost all the matches.
- D lost to A but won against C and F.
- E lost to B but won against C and F.
- B lost at least one match.
- F did not play against the top team of Stage-I.

**Stage-II:**

- The leader of Stage-I lost the next two matches.
- Of the two teams at the bottom after Stage-I, one team won both matches, while the other lost both matches.
- One more team lost both matches in Stage-II.

The only team(s) that won both the matches in Stage-II is (are)

A. B B. E & F C. A, E & F D. B, E & F E. B & F

cat2008 logical-reasoning logic-puzzles

## 2.18.156 Logic Puzzles: CAT 2008 | Question: 42 top

**Answer the following question based on the information given below.**

In a sport event, six teams (A, B, C, D, E and F) are competing against each other. Matches are scheduled in two stages. Each team plays three matches in Stage-I and two matches in Stage-II. No team plays against the same team more than once in the event. No ties are permitted in any of the matches. The observations after the completion of Stage-I and Stage-II are as given below.

**Stage-I:**

- One team won all the three matches.
- Two teams lost all the matches.
- D lost to A but won against C and F.
- E lost to B but won against C and F.
- B lost at least one match.
- F did not play against the top team of Stage-I.

**Stage-II:**

- The leader of Stage-I lost the next two matches.
- Of the two teams at the bottom after Stage-I, one team won both matches, while the other lost both matches.
- One more team lost both matches in Stage-II.

The teams that won exactly two matches in the event are

A. A, D & F B. D & E C. E & F D. D, E & F E. D & F

## 2.18.164 Logic Puzzles: CAT 2010 | Question: 17 top

For constructing the working class consumer price index number of a particular town, the following weights corresponding to different group of items were assigned : Food – 55, Fuel – 15, Clothing – 10, Rent – 8 and Miscellaneous – 12. It is known that the rise in food prices is double that of fuel and the rise in miscellaneous group prices is double that of rent. In October 2006, the increased D, A by a factory of that town by 182% fully compensated for the rise in prices of food and rent but did

not compensate for anything else. Another factory of the same locality increased D, A by 46.5%, which compensated for the rise in fuel and miscellaneous groups.

Which is the correct combination of the rise in prices of food, fuel, rent and miscellaneous group?

A. 320.14, 159.57, 95.64, 166.82
B. 317.14, 158.57, 94.64, 189.28
C. 311.14, 159.57, 90.64, 198.28
D. 321.14, 162.57, 84.46, 175.38

## 2.18.167 Logic Puzzles: CAT 2011 | Question: 28 top

When Munna Bhai joined the university of South Ghatkopar for his M.S., Mr. Irani, his professor, asked him to prove his calibre in a test conducted for the entire class. The class comprised of exactly 10 students. The test contain exactly 10 multiple choice type questions. However, Munna as is always the case, managed to get the correct answer-key for all the 10 questions well before the exam. But in the exam, he wrongly marked exactly one question, on purpose, to avoid raising any suspicion. All the other nine students o the class also formed their respective answer-keys in the following manner. They first obtain the answer-key from one or two of the students, who are called his/her jigris, who already have their answer keys. If a student has two jigris, then he/she first compares the answer from both the jigris. If the key to any question from both the jigris is identical, it is copied, otherwise it is left blank. If a student has only one jigri, then he/she copies the jigri's keys into his/her copy. However, in the exam, each student intentionally replaced exactly one of the answers, other than a blank, with a wrong answer. It is known that no students replaced the answers to the same question. When Mr. Irani finally assessed all the answer-keys, he formulated the following table, which gives the answer-keys that each of the ten students marked for the 10 questions- I through X.

| Question No. / Student | I | II | III | IV | V | VI | VII | VIII | IX | X |
|---|---|---|---|---|---|---|---|---|---|---|
| Arun | b | a | - | b | c | - | - | a | c | b |
| Chinky | a | a | - | d | c | - | - | - | c | b |
| Jassi | b | - | d | d | c | b | d | a | d | b |
| Lucky | b | a | - | d | c | b | - | b | c | b |
| Munna | b | a | b | d | c | b | d | a | c | b |
| Niran | b | a | d | d | c | b | d | a | c | b |
| Praveen | b | a | b | d | c | b | c | a | c | b |

Munna is the jigri of

A. Sastry and Ritesh B. Niran and Praveen C. Lucky and Rahul D. Jassi an Lucky

cat2011 logical-reasoning logic-puzzles

## 2.18.168 Logic Puzzles: CAT 2011 | Question: 29 top

When Munna Bhai joined the university of South Ghatkopar for his M.S., Mr. Irani, his professor, asked him to prove his calibre in a test conducted for the entire class. The class comprised of exactly 10 students. The test contain exactly 10 multiple choice type questions. However, Munna as is always the case, managed to get the correct answer-key for all the 10 questions well before the exam. But in the exam, he wrongly marked exactly one question, on purpose, to avoid raising any suspicion. All the other nine students o the class also formed their respective answer-keys in the following manner. They first obtain the answer-key from one or two of the students, who are called his/her jigris, who already have their answer keys. If a student has two jigris, then he/she first compares the answer from both the jigris. If the key to any question from both the jigris is identical,

it is copied, otherwise it is left blank. If a student has only one jigri, then he/she copies the jigri's keys into his/her copy. However, in the exam, each student intentionally replaced exactly one of the answers, other than a blank, with a wrong answer. It is known that no students replaced the answers to the same question. When Mr. Irani finally assessed all the answer-keys, he formulated the following table, which gives the answer-keys that each of the ten students marked for the 10 questions- I through X.

| Question No. / Student | I | II | III | IV | V | VI | VII | VIII | IX | X |
|---|---|---|---|---|---|---|---|---|---|---|
| Arun | b | a | - | b | c | - | - | a | c | b |
| Chinky | a | a | - | d | c | - | - | - | c | b |
| Jassi | b | - | d | d | c | b | d | a | d | b |
| Lucky | b | a | - | d | c | b | - | b | c | b |
| Munna | b | a | b | d | c | b | d | a | c | b |
| Niran | b | a | d | d | c | b | d | a | c | b |
| Praveen | b | a | b | d | c | b | c | a | c | b |
| Rahul | b | c | d | d | c | b | d | a | c | b |
| Ritesh | b | a | - | d | s | b | - | - | c | b |
| Sastry | b | a | d | d | c | a | d | a | c | b |

Who among the following is not the jigri of any of the ten students?

A. Jassi B. Praveen C. Lucky D. Rahul

cat2011 logical-reasoning logic-puzzles

## 2.18.169 Logic Puzzles: CAT 2011 | Question: 30 top

When Munna Bhai joined the university of South Ghatkopar for his M.S., Mr. Irani, his professor, asked him to prove his calibre in a test conducted for the entire class. The class comprised of exactly 10 students. The test contain exactly 10 multiple choice type questions. ## 2.18.170 Logic Puzzles: CAT 2011 | Question: 54 top

On the eve of a special function in view of 'National Integration', seven participants – A, B, C, D, E, F and G, are to be accommodated in two rooms, each room having a capacity of four persons only. For the allocation, the following conditions must be considered.

i. A, a Gujarati, also speak Tamil and Bengali.
ii. B and F are both Bengali and speak only that language
iii. C, a Gujarati, also speaks Tamil.
iv. D and G are Tamilians and speak only Tamil.
v. E, a Gujarati, also speaks Bengali.
vi. Bengalis and Tamilians refuse to share their rooms with each other.

Further, it is necessary for each participant in a room to be able to converse with at least one other participant in the same

room, in at least one language.

Which of the following combinations of participants in a room will satisfy all conditions for both the rooms?

A. B, C, F B. C, D, F, G C. A, D, E, G D. D, G, C, E

## 2.18.173 Logic Puzzles: CAT 2011 | Question: 57 top

Three trains-Rajdhani Express, Shatabdi Express and Taj Mahal Express-travel between two stations without stopping anywhere in between. No two trains have the same starting station or the same terminating station or the same travel fare. Also, the following known about these trains.

i. The fare for the train which travels between Chennai and Pune is ₹1650.
ii. Taj Mahal Express runs between Delhi and Mumbai.
iii. Fare for the train which travels between Bengaluru and Agra is ₹750 less than the fare for Taj Mahal Express.
iv. The fare for Rajdhani Express is ₹150 less than the fare for Taj Mahal Express.

What is the fare for Shatabadi Express?

A. ₹1650
B. ₹1800
C. ₹1050
D. Cannot be determined

cat2011 logical-reasoning logic-puzzles

## 2.18.174 Logic Puzzles: CAT 2011 | Question: 58 top

Three trains-Rajdhani Express, Shatabdi Express and Taj Mahal Express-travel between two stations without stopping anywhere in between. No two trains have the same starting station or the same terminating station or the same travel fare. Also, the following known about these trains.

1. The fare for the train which travels between Chennai and Pune is ₹1650.
2. Taj Mahal Express runs between Delhi and Mumbai.
3. Fare for the train which travels between Bengaluru and Agra is ₹750 less than the fare for Taj Mahal Express.
4. The fare for Rajdhani Express is ₹150 less than the fare for Taj Mahal Express.

Which among the following statements is definitely true?

A. The fare for Shatabdi Express which, travels between Bengaluru and Agra is ₹1800.
B. The fare for Taj Mahal Express, travels between Delhi and Mumbai is ₹1050.
C. The fare for Rajdhani Express, which travels between Chennai and Pune is ₹1650.
D. None of the above.

## 2.18.175 Logic Puzzles: CAT 2011 | Question: 59 top

In a recently held test series consisting of three matches-I, II and III, five players. Sehwag, Ganguly,Tendulkar, Dravid and Laxman, are the top five scoring batsmen, not necessarily in the same order.

i. No two players scored the same number of runs in any match.
ii. Sehwag scored more runs than Ganguly in the 1st and 2nd matches.
iii. The player who scored the highest runs in the 3rd match scored the least runs in the 1st match.
iv. Dravid scored more runs than Laxman but less runs than Tendulkar in the 2nd match. Tendulkar scored more runs than Laxman in the 1st match. Laxman scored more runs than Ganguly but less than Dravid in the 3rd match.
v. Tendulkar scored the lowest runs in one match and in two matches in position in the decreasing order of the runs scored by the batsmen is same. He was not the top scorer in any of the three matches.

Among the given five players, who scored the least number of runs in the 3rd match?

A. Sehwag
B. Ganguly
C. Tendulkar
D. Cannot be determined

cat2011 logical-reasoning logic-puzzles

## 2.18.176 Logic Puzzles: CAT 2011 | Question: 60 top

In a recently held test series consisting of three matches-I, II and III, five players. Sehwag, Ganguly,Tendulkar, Dravid and Laxman, are the top five scoring batsmen, not necessarily in the same order.

1. No two players scored the same number of runs in any match.
2. Sehwag scored more runs than Ganguly in the 1st and 2nd matches.
3. The player who scored the highest runs in the 3rd match scored the least runs in the 1st match.
4. Dravid scored more runs than Laxman but less runs than Tendulkar in the 2nd match. Tendulkar scored more runs than Laxman in the 1st match. Laxman scored more runs than Ganguly but less than Dravid in the 3rd match.
5. Tendulkar scored the lowest runs in one match and in two matches in position in the decreasing order of the runs scored by the batsmen is same. He was not the top scorer in any of the three matches.

If Tendulkar scored more runs than Ganguly in the 2nd match, then who is the second highest scorer in the 1st match?

A. Sehwag B. Laxman C. Dravid D. None of these

cat2011 logical-reasoning logic-puzzles

## 2.18.177 Logic Puzzles: CAT 2012 | Question: 15 top

Read the information carefully and answer the questions follow that.

A cricket tournament had three teams India, Australia and Sri Lanka taking part in it. The format of the tournament was such that in the preliminary stage each of these teams, would play the other teams four times. Four points are awarded for a win and in case a team beats another team by a huge margin, it is given a bonus point in addition to the four points. At the end of the preliminary stage, the top two teams, in terms of the points scored, reaches the finals. No match in the tournament ends in a tie and if two teams end up with the same number of points at the end of the preliminary stage, the team with the better net run rate

is placed higher.

If India reached the finals, then what is the minimum number of points it would scored in the preliminary stage?

A. 8 B. 10 C. 12 D. 16

cat2012 logical-reasoning logic-puzzles

## 2.18.178 Logic Puzzles: CAT 2012 | Question: 16 top

Read the information carefully and answer the questions follow that.

A cricket tournament had three teams India, Australia and Sri Lanka taking part in it. ## 2.18.184 Logic Puzzles: CAT 2012 | Question: 52 top

Read the following information carefully and answer the question based on that.

Two families are planning to go on a canoe trip together. The families consist of the following people: Robert and Mary Henderson and their three sons Tommy, Don and William, Jerome and Ellen Penick and their two daughters Kate and Susan.

There will be three canoes with three people in each canoe. At least one of the four parents must be in each canoe. At least one person from each family must be in each canoe.

If the two mothers ride together in the same canoe and the three brothers each ride in a different canoe,which of the following must be true?

A. Each canoe has both males and females in it
B. One of the canoes has only females in it
C. One of the canoes has only males in it
D. The sisters ride in the same canoe

cat2012 logical-reasoning logic-puzzles

## 2.18.185 Logic Puzzles: CAT 2012 | Question: 53 top

Read the following information carefully and answer the question based on that.

Two families are planning to go on a canoe trip together. The families consist of the following people: Robert and Mary Henderson and their three sons Tommy, Don and William, Jerome and Ellen Penick and their two daughters Kate and Susan.

There will be three canoes with three people in each canoe. At least one of the four parents must be in each canoe. At least one person from each family must be in each canoe.

If Ellen and Susan are together in one of the canoes, which of the following could be a list of the people together in another canoe?

A. Dan, Jerome, Kate
B. Dan, Jerome, William
C. Dan, Kate, Tommy
D. Jerome, Kate, Mary

cat2012 logical-reasoning logic-puzzles

## 2.18.186 Logic Puzzles: CAT 2012 | Question: 54 top

Read the following information carefully and answer the question based on that.

Two families are planning to go on a canoe trip together. The families consist of the following people: Robert and Mary Henderson and their three sons Tommy, Don and William, Jerome and Ellen Penick and their two daughters Kate and Susan.

There will be three canoes with three people in each canoe. At least one of the four parents must be in each canoe. At least one person from each family must be in each canoe.

If Jerome and Mary are together in one of the canoes, each of the following could be a list of the people together in another canoe except

A. Dan, Ellen, Susan
B. Ellen, Robert, Tommy
C. Ellen, Susan, William
D. Ellen, Tommy, William

cat2012 logical-reasoning logic-puzzles

## 2.18.187 Logic Puzzles: CAT 2012 | Question: 55 top

Read the following information carefully and answer the question based on that.

Two families are planning to go on a canoe trip together. The families consist of the following people: Robert and Mary Henderson and their three sons Tommy, Don and William, Jerome and Ellen Penick and their two daughters Kate and Susan.

There will be three canoes with three people in each canoe. At least one of the four parents must be in each canoe. At least one person from each family must be in each canoe.

If each of the Henderson children rides in a different canoe, which of the following must be true?

I. The Penick children do not ride together.
II. The Penick parents do not ride together.
III. The Henderson parents do not ride together.

A. Only I
B. Only II
C. I and II
D. I and III

Answer key

## 2.18.188 Logic Puzzles: CAT 2012 | Question: 58 top

Read the following question carefully and answer the question based on that.

Each of five people A, B, C, D and E owns a different car among Maruti, Mercedes, Sierra, Fiat and Audi and the colours of these cars are Black,Green,Blue,White and Red, not necessary in that order. No two cars are of the same colour. It is also known that

i. A's car is not Black and it is not a Mercedes.
ii. B's car is Green and it is not a Sierra.
iii. E's car is not White and it is not an Audi.
iv. C's car is a Mercedes and it is not Blue.
v. D's car is not Red and it is Fiat.

If A owns a Blue Sierra, then E's car can be a

A. Red Maruti
B. White Maruti
C. Black Audi
D. Red Audi

cat2012 logical-reasoning logic-puzzles

## 2.18.189 Logic Puzzles: CAT 2012 | Question: 59 top

Read the following question carefully and answer the question based on that.

Each of five people A, B, C, D and E owns a different car among Maruti, Mercedes, Sierra, Fiat and Audi and the colours of these cars are Black,Green,Blue,White and Red, not necessary in that order. No two cars are of the same colour. It is also known that

i. A's car is not Black and it is not a Mercedes.
ii. B's car is Green and it is not a Sierra.
iii. E's car is not White and it is not an Audi.
iv. C's car is a Mercedes and it is not Blue.
v. D's car is not Red and it is Fiat.

If A owns a White Audi, then E's car can be a

A. Red Maruti B. Blue Maruti C. Green Audi D. Black Sierra

cat2012 logical-reasoning logic-puzzles

## 2.18.190 Logic Puzzles: CAT 2012 | Question: 60 top

Read the following question carefully and answer the question based on that.

Each of five people A, B, C, D and E owns a different car among Maruti, Mercedes, Sierra, Fiat and Audi and the colours of these cars are Black, Green, Blue, White and Red, not necessary in that order. No two cars are of the same colour. It is also known that

iii. E's car is not White and it is not an Audi.
iv. C's car is a Mercedes and it is not Blue.
v. D's car is not Red and it is Fiat.

If A's car is a Red Maruti and D's car is White, then E owns a

A. Black Audi B. Blue Sierra C. Blue Sierra D. Blue Audi

cat2012 logical-reasoning logic-puzzles

## 2.18.191 Logic Puzzles: CAT 2013 | Question: 18 top

The following is the table of points drawn at the end of all matches in a six-nation Hockey tournament, in which each country played with every other country exactly once. The table gives the positions of the countries in terms of their respective total points scored(i.e., in the decreasing order of their total points). Each win was worth three points, each draw one point, and there were no points for a loss. Some information in the table has been intentionally left out. The results of none of the individual matches are known, except that Pakistan beat India and no two teams finished with the same number of points.

| Position | Country | Won | Drawn | Lost | Goals For | Goals Against | Total Points |
|---|---|---|---|---|---|---|---|
| 1 | Australia | | | | 17 | 5 | 15 |
| 2 | Netherlands | | | | 9 | 6 | 10 |
| 3 | Pakistan | | | | | 2 | 8 |
| 4 | India | | | | 2 | 5 | |
| 5 | South Korea | | | | 7 | 11 | 2 |
| 6 | Spain | | | | 8 | 16 | |

Which of the following matches was a draw?

A. India vs South Korea
B. Spain vs Netherlands
C. Netherlands vs South Korea
D. Spain vs South Korea

cat2013 logical-reasoning logic-puzzles

## 2.18.192 Logic Puzzles: CAT 2013 | Question: 19 top

The following is the table of points drawn at the end of all matches in a six-nation Hockey tournament, in which each country played with every other country exactly once. The table gives the positions of the countries in terms of their respective total points scored(i.e., in the decreasing order of their total points). Each win was worth three points, each draw one point, and there were no points for a loss. Some information in the table has been intentionally left out. The results of none of the individual matches are known, except that Pakistan beat India and no two teams finished with the same number of points.

| Position | Country | Won | Drawn | Lost | Goals For | Goals Against | Total Points |
|---|---|---|---|---|---|---|---|
| 1 | Australia | | | | 17 | 5 | 15 |
| 2 | Netherlands | | | | 9 | 6 | 10 |
| 3 | Pakistan | | | | | 2 | 8 |
| 4 | India | | | | 2 | 5 | |
| 5 | South Korea | | | | 7 | 11 | 2 |
| 6 | Spain | | | | 8 | 16 | |

The total number of points won by India is

A. 5
B. 6
C. 7
D. Cannot be determined

## 2.18.194 Logic Puzzles: CAT 2013 | Question: 21 top

The following is the table of points drawn at the end of all matches in a six-nation Hockey tournament, in which each country played with every other country exactly once. The table gives the positions of the countries in terms of their respective total points scored(i.e., in the decreasing order of their total points). Each win was worth three points, each draw one point, and there were no points for a loss. Some information in the table has been intentionally left out. The results of none of the individual matches are known, except that Pakistan beat India and no two teams finished with the same number of points.

| Position | Country | Won | Drawn | Lost | Goals For | Goals Against | Total Points |
|---|---|---|---|---|---|---|---|
| 1 | Australia | | | | 17 | 5 | 15 |
| 2 | Netherlands | | | | 9 | 6 | 10 |
| 3 | Pakistan | | | | | 2 | 8 |
| 4 | India | | | | 2 | 5 | |
| 5 | South Korea | | | | 7 | 11 | 2 |
| 6 | Spain | | | | 8 | 16 | |

The number of goals scored by Australia against India is at most

A. 5 B. 4 C. 3 D. 2

## 2.18.195 Logic Puzzles: CAT 2013 | Question: 36 top

Each of nine persons. P, Q, R, S, T, U, V, W and X, lives in a different flat in an apartment building, which has six floors (excluding the ground floor, which is used only for parking) and three flats on each floor. The three flats on each floor are in a row and no two adjacent flats on a floor are occupied. At least one person lives on each floor.

Further the following information is known:

I. P and Q live on the same floor.
II. R and S live on different floors.
III. T lives in the middle flat on the fourth Floor.
IV. U lives on the sixth floor and V lives on the first floor.
V. W Fives on the floor which is immediately above the floor on which X lives.

If W and U do not live on the same floor, then which of the following cannot be true?

A. W lives on the third floor.
B. Q lives on the third floor.
C. R lives on the second floor.
D. P lives on the second floor.

cat2013 logical-reasoning logic-puzzles

## 2.18.196 Logic Puzzles: CAT 2013 | Question: 37 top

Each of nine persons. P, Q, R, S, T, U, V, W and X, lives in a different flat in an apartment building, which has six floors (excluding the ground floor, which is used only for parking) and three flats on each floor. The three flats on each floor are in a row and no two adjacent flats on a floor are occupied. At least one person lives on each floor.

Further the following information is known:

1. P and Q live on the same floor.
2. R and S live on different floors.
3. T lives in the middle flat on the fourth Floor.
4. U lives on the sixth floor and V lives on the first floor.
5. W Fives on the floor which is immediately above the floor on which X lives.

If S and R are living on the first floor and the sixth floor respectively, then which of the following must be true?

A. T is living on the same floor as X.
B. Q is living on the second floor.
C. P is living on the third floor.
D. W is living alone on his floor.

cat2013 logical-reasoning logic-puzzles

## 2.18.197 Logic Puzzles: CAT 2013 | Question: 38 top

Each of nine persons. P, Q, R, S, T, U, V, W and X, lives in a different flat in an apartment building, which has six floors (excluding the ground floor, which is used only for parking) and three flats on each floor. The three flats on each floor are in a row and no two adjacent flats on a floor are occupied. At least one person lives on each floor.

Further the following information is known:

1. P and Q live on the same floor.
2. R and S live on different floors.
3. T lives in the middle flat on the fourth Floor.
4. U lives on the sixth floor and V lives on the first floor.
5. W Fives on the floor which is immediately above the floor on which X lives.

If Q lives on the third floor, then how many combinations of persons could live on the second floor?

A. 8 B. 6 C. 5 D. 7

cat2013 logical-reasoning logic-puzzles

## 2.18.198 Logic Puzzles: CAT 2013 | Question: 43 top

Four friends John, Mike, Lewis and Peter went on a picnic and they participated in four adventure sports - Paragliding, Skiing, Bungee Jumping and Rock climbing. Further the following information is known about them:

i. The number of persons who participated in Skiing is one more than that of those who participated in Bungee Jumping and

Rock Climbing, which, in turn, is same as that of those who participated in Paragliding, which, in turn, is twice that of those who participated in Rock Climbing.
ii. Every person participated in at least one event and each sport was taken up by at least one person.
iii. John participated in Skiing but not in Rock Climbing while Lewis participated in Bungee Jumping but not in Paragliding.
iv. None of them participated in both Bungee Jumping and Rock Climbing.
v. Peter participated in three sports.
vi. Between Skiing and Paragliding, Mike participated in exactly one sport.

If Lewis participated in two sports, which of the following is definitely false?

A. Mike did not participate in Skiing.
B. John participated in Paragliding.
C. Lewis participated in Skiing.
D. Mike participated in Paragliding.

cat2013 logical-reasoning logic-puzzles

## 2.18.199 Logic Puzzles: CAT 2013 | Question: 44 top

Four friends John, Mike, Lewis and Peter went on a picnic and they participated in four adventure sports - Paragliding, Skiing, Bungee Jumping and Rock climbing. Further the following information is known about them:

1. The number of persons who participated in Skiing is one more than that of those who participated in Bungee Jumping and Rock Climbing, which, in turn, is same as that of those who participated in Paragliding, which, in turn, is twice that of those who participated in Rock Climbing.
2. Every person participated in at least one event and each sport was taken up by at least one person.
3. John participated in Skiing but not in Rock Climbing while Lewis participated in Bungee Jumping but not in Paragliding.
4. None of them participated in both Bungee Jumping and Rock Climbing.
5. Peter participated in three sports.
6. Between Skiing and Paragliding, Mike participated in exactly one sport.

If John participated in Paragliding, which of the following statements is definitely true?

A. Mike participated in Rock Climbing.
B. John Participated in Bungee Jumping.
C. Lewis did not participate in Skiing.
D. Peter did not participate in Rock Climbing.

cat2013 logical-reasoning logic-puzzles

## 2.18.200 Logic Puzzles: CAT 2013 | Question: 45 top

Four friends John, Mike, Lewis and Peter went on a picnic and they participated in four adventure sports - Paragliding, Skiing, Bungee Jumping and Rock climbing. Further the following information is known about them:

1. The number of persons who participated in Skiing is one more than that of those who participated in Bungee Jumping and Rock Climbing, which, in turn, is same as that of those who participated in Paragliding, which, in turn, is twice that of those who participated in Rock Climbing.
2. Every person participated in at least one event and each sport was taken up by at least one person.
3. John participated in Skiing but not in Rock Climbing while Lewis participated in Bungee Jumping but not in Paragliding.
4. None of them participated in both Bungee Jumping and Rock Climbing.
5. Peter participated in three sports.
6. Between Skiing and Paragliding, Mike participated in exactly one sport.

Which of the following is not a possible combination of number of sports taken up by John, Mike and Lewis?

A. John -.1, Mike- 2, Lewis -2.
B. John-3,Mike-1,Lewis-1.
C. John-1,Mike-3,Lewis-1.
D. John-2,Mike-2,Lewis-1.

## 2.18.201 Logic Puzzles: CAT 2013 | Question: 46 top

Eight men have their first names. as Ratan, Rama, Ramesh, Ramu, Rakesh, Ranjan, Rishabh and Rohit and their surnames are Kulkarni, Anora, Jain, Dutta, Singh, Sharma, Sen and Murthy, not necessarily in the same order. These eight persons are sitting around a circular table as per the following instructions:

i. Ramu is sitting opposite Kulkarni and to the left of Singh.
ii. Rajan is sitting opposite Sharma and next to Murthy, who is sitting to the left of Rama.
iii. Arora is sitting opposite Ratan and Rohit sits adjacent to Dutta.

iv. Rama, who is next to Rishabh and Ramesh, sits opposite Sen.

If Rishabh Arora sits between Kulkarni and Sharma, and opposite Singh, then who sits opposite Rakesh Dutta?

A. Ramesh Murthy B. Rama Murthy C. Rajah Jain D. Rishabh Arora

## 2.18.202 Logic Puzzles: CAT 2013 | Question: 56 top

There are ten boxes. numbered 1 to 10, each containing $g$ gold coins. Each of the coins in nine of these ten boxes weighs 10 gm, whereas each of the coins in the tenth box weighs 20 gm. A digital weighing machine is provided. Now, a logician, Mr. Kapil, is invited. The task assigned to him is that he has to find out the box containing the coins weighing 20 gm each.

If $g = 9$, then what is the minimum possible number of times for which the weighing machine is to be used?

A. 1 B. 2 C. 3 D. 4

cat2013 logical-reasoning logic-puzzles

## 2.18.203 Logic Puzzles: CAT 2013 | Question: 57 top

There are ten boxes. numbered 1 to 10, each containing $g$ gold coins. Each of the coins in nine of these ten boxes weighs 10 gm, whereas each of the coins in the tenth box weighs 20 gm. A digital weighing machine is provided. Now, a logician, Mr. Kapil, is invited. The task assigned to him is that he has to find out the box containing the coins weighing 20 gm each.

If $g = 7$, what is the minimum possible number of times for which the weighing machine is to be used?

A. 1 B. 2 C. 3 D. 4

cat2013 logical-reasoning logic-puzzles

## 2.18.204 Logic Puzzles: CAT 2013 | Question: 58 top

There are ten boxes. numbered 1 to 10, each containing $g$ gold coins. Each of the coins in nine of these ten boxes weighs 10 gm, whereas each of the coins in the tenth box weighs 20 gm. A digital weighing machine is provided. Now, a logician, Mr. Kapil, is invited. The task assigned to him is that he has to find out the box containing the coins weighing 20 gm each.

If g = 3. what is the minimum possible number of times for which the weighing machine is to be used?

A. 3 B. 2 C. 5 D. 4

cat2013 logical-reasoning logic-puzzles

## 2.18.205 Logic Puzzles: CAT 2013 | Question: 59 top

There are ten boxes. numbered 1 to 10, each containing $g$ gold coins. Each of the coins in nine of these ten boxes weighs 10 gm, whereas each of the coins in the tenth box weighs 20 gm. A digital weighing machine is provided. Now, a logician, Mr. Kapil, is invited. The task assigned to him is that he has to find out the box containing the coins weighing 20 gm each.

If $g = 2$. what is the minimum possible number of times for which the weighing machine is to be used?

A. 2 B. 3 C. 5 D. 4

cat2013 logical-reasoning logic-puzzles

## 2.18.206 Logic Puzzles: CAT 2014 | Question: 10,11,12,13 top

Directions for Questions: Answer the following questions based on the statements given below: Following questions are about 6 project reports of different heights from 6 different students and of 6 different colors displayed on a cupboard.

i. There are three Project Reports on each side of the aisle.
ii. These six Project Reports are labeled as Piyush, Qadar, Richa, Sandesh, Tanvi and Urvashi.
iii. The Project Reports are of different colours, namely, Red, Blue, Green, Orange, Yellow and White.
iv. The Project Reports are of different heights. (v) Tanvi, the tallest Project Report, is exactly opposite to the Red coloured Project Report.
v. The shortest Project Report is exactly opposite to the Green coloured Project Report.
vi. Urvsahi, the Orange coloured Project Report, is located between Piyush and Sandesh.
vii. Richa, the Yellow coloured Project Report, is exactly opposite to Piyush.
viii. Qadar, the Green coloured Project Report, is exactly opposite to Urvashi.
ix. Piyush, the White coloured Project Report, is taller than Richa, but shorter than Sandesh and Qadar.

What is the colour of the Project Report diagonally opposite to the Yellow coloured Project Report?

a. White b. Blue c. Green d. Red e. none of these

Which is the second tallest Project Report?

a. Piyush b. Sandesh c. Qadar d. Richa

What is the colour of the tallest Project Report?

a. Red b. Blue c. Green d. none of these

What is the color of the report named Richa?

a. Red b. Blue c. Green d. Yellow

Answer key

## 2.18.207 Logic Puzzles: CAT 2014 | Question: 12 top

The HR Manager of the IT company recently scanned employees training results of various exams into the central computer system. When their character reading software cannot read something, it leaves the space blank. The scanner output reads as follows:

| Name | Java | C Language | Testing | Analysis | Project Management | GPA |
|---|---|---|---|---|---|---|
| Amanpreet | | B | F | | | 1.4 |
| Bikas | D | D | F | F | | |
| Chandra | | D | A | F | F | 2.4 |
| Deepak | A | B | | D | D | 3.2 |
| Fazal | D | F | B | | D | 2.4 |
| Gowri | C | C | A | | B | 3.8 |
| Hari | | B | A | | D | 2.8 |
| Ismet | | | B | | A | |
| Jagdeep | A | A | B | | C | 3.8 |
| Kunal | F | | A | F | F | 1.8 |
| Leena | B | A | | B | F | 3.2 |
| Manab | | | A | B | B | |
| Navdeep | A | D | B | A | F | 3.6 |
| Osman | C | | B | B | A | 4.6 |
| Preeti | F | D | | D | | 3.2 |
| Rahul | A | C | A | | F | 4.2 |
| Sameer | | C | F | B | | |
| Tara | B | | | | | 2.4 |
| Utkarsh | | | F | C | A | 3 |
| Vipul | A | | C | C | F | 2.4 |

In the grading system, $A$, $B$, $C$, $D$, and $F$ grades fetch $6, 4, 3, 2$, and $0$ grade points respectively. The Grade Point Average (GPA) is the arithmetic mean of the grade points obtained in the five subjects. For example Navdeep's GPA is $(6 + 2 + 4 + 6 + 0)/5 = 3.6$. Some additional facts are also known about the student's grades. These are

a. Vipul obtained the same grade in both the courses. b. Fazal obtained the same grade in both the courses. What grade did Preeti obtain in Testing?

a. A b. B c. C d. D

cat2014 logical-reasoning logic-puzzles

## 2.18.208 Logic Puzzles: CAT 2014 | Question: 13 top

**Answer the questions on the basis of the information given below.**

The HR Manager of the IT company recently scanned employees training results of various exams into the central computer system. When their character reading software cannot read something, it leaves the space blank. The scanner output reads as follows:

| Name | Java | C Language | Testing | Analysis | Project Management | GPA |
|---|---|---|---|---|---|---|
| Amanpreet | | B | F | | | 1.4 |
| Bikas | D | D | F | F | | |
| Chandra | | D | A | F | F | 2.4 |
| Deepak | A | B | | D | D | 3.2 |
| Fazal | D | F | B | | D | 2.4 |
| Gowri | C | C | A | | B | 3.8 |
| Hari | | B | A | | D | 2.8 |
| Ismet | | | B | | A | |
| Jagdeep | A | A | B | | C | 3.8 |
| Kunal | F | | A | F | F | 1.8 |
| Leena | B | A | | B | F | 3.2 |
| Manab | | | A | B | B | |

| Manab | | | A | B | B | |
| Navdeep | A | D | B | A | F | 3.6 |
| Osman | C | | B | B | A | 4.6 |
| Preeti | F | D | | D | | 3.2 |
| Rahul | A | C | A | | F | 4.2 |
| Sameer | | C | F | B | | |

| | | | | | | |
|---|---|---|---|---|---|---|
| Tara | B | | | | | 2.4 |
| Utkarsh | | | F | C | A | 3 |
| Vipul | A | | C | C | F | 2.4 |

What grade did Utkarsh obtain in Java?

a. B b. C c. D d. F

cat2014 logical-reasoning logic-puzzles

## 2.18.213 Logic Puzzles: CAT 2014 | Question: 17 top

**Answer the questions based on following data.**

A dealer deals only in colour TVs and VCRs. He wants to spend up to $Rs.12$ lakhs to buy $100$ pieces. He can purchase a colour TV at $Rs.10,000$ and a VCR at $Rs.15,000$. He can sell a colour TV at $Rs.12,000$ and a VCR at $Rs.17,500$. His objective is to maximize profits. Assume that he can sell all the items that he stocks.

If the dealer would have managed to get an additional space to stock $20$ more items, then for maximizing profit, the ratio of number of VCRs and number of TVs that he should stock is

A. $7:3$ B. $0$ C. $1:2$ D. None of these

cat2014 logical-reasoning logic-puzzles

## 2.18.214 Logic Puzzles: CAT 2014 | Question: 18 top

**Answer the questions based on following data.**

A dealer deals only in colour TVs and VCRs. He wants to spend up to $Rs.12$ lakhs to buy $100$ pieces. He can purchase a colour TV at $Rs.10,000$ and a VCR at $Rs.15,000$. He can sell a colour TV at $Rs.12,000$ and a VCR at $Rs.17,500$. His objective is to maximize profits. Assume that he can sell all the items that he stocks.

The maximum profit, in rupees lakh, the dealer can earn from his original stock if he can sell a colour TV at $Rs.12200$ and VCR at $Rs.18300$ is

A. $2.64$ B. $2.49$ C. $2.72$ D. $2.87$

cat2014 logical-reasoning logic-puzzles

Answer key

## 2.18.215 Logic Puzzles: CAT 2014 | Question: 23 top

In a Tennis Open tournament $71$ persons have signed up for elimination rounds. All players are to be paired up for the first round, but because $71$ is an odd number one player gets a bye, which promotes him to the second round, without actually playing in the first round. The pairing continues on the next round, with a bye to any player left over. If the schedule is planned so that a minimum number of matches are required to determine the champion, the number of matches which must be played is

a. $71$ b. $70$ c. $69$ d. $36$

cat2014 logical-reasoning logic-puzzles

## 2.18.216 Logic Puzzles: CAT 2014 | Question: 24 top

There are ten $50$ paise coins placed on a table. Six of these show tails four show heads. A coin is chosen at random and flipped over (not tossed). This operation is performed seven times. One of the coins is then covered. Of the remaining nine coins, five show tails and four show heads. The covered coin shows

a. a head
b. a tail
c. more likely a head
d. more likely a tail

cat2014 logical-reasoning logic-puzzles

## 2.18.217 Logic Puzzles: CAT 2014 | Question: 24, 25, 26, 27 top

Recently, Rajesh visited the local casino where he came across a new card game. Two players, using a normal deck of $52$ playing cards, play this game. One player is called the 'dealer‘ and the other is called the 'player‘. First, the player picks a card at random from the deck. This is called the base card. The amount in rupees equal to the face value of the base card is called the base amount. The face values of ace, king, queen and jack are ten. For other cards the face value is the number on the card. Once the 'player‘ picks a card from the deck, the 'dealer‘ pays him the base amount. Then the 'dealer‘ picks a card from the

deck and this card is called the top card. If the top card is of the same suit as the base card, the 'player‘ pays twice the base amount to the 'dealer‘. If the top card is of the same colour as the base card (but not the same suit), then the 'player‘ pays the base amount to the 'dealer‘. If the top card happens to be of a different colour than the base card, the 'dealer‘ pays the base amount to the 'player‘. Rajesh played the game four times. First time he picked eight of clubs and the 'dealer‘ picked queen of clubs. Second time, he picked ten of hearts and the 'dealer‘ picked two of spades. Next time, Rajesh picked six of diamonds and the 'dealer‘ picked ace of hearts. Lastly, he picked eight of spades and the 'dealer‘ picked jack of spades. Answer the following questions based on these four games.

If Rajesh stopped playing the game when his gain would be maximized, the gain in Rs. Would have been

a. 12 b. 20 c. 16 d. 4

The initial money Rajesh had (before the beginning of the game sessions) was Rs. X. At no point did he have to borrow any money. What is the minimum possible value of X?

a. 16 b. 8 c. 100 d. 24

If the final amount of money that Rajesh had with him was Rs. 100, what was the initial amount he had with him?

a. 120 b. 8 c. 4 d. 96

If Rajesh stopped playing the game when his loss would be maximumm, the loss in Rs. Would have been

a. $-12$ b. $-20$ c. $-8$ d. $-4$

## 2.18.218 Logic Puzzles: CAT 2014 | Question: 38 top

**Directions for Questions:**

Answer the following questions based on the information from an airline about their passengers (pax) in particular sectors is given below: The proportion of males and the proportion of vegetarian pax are given below. The airline has a total of 800 passengers, 80% of whom are in the Mumbai - Delhi sector and rest are equally divided between Mumbai - Hyderabad and Mumbai - Bangalore.

| Sector | Male(M) | Vegetarian (V) |
|---|---|---|
| Mumbai - Bangalore | 0.6 | |
| Mumbai - Hyderabad | 0.55 | 0.5 |
| Mumbai - Delhi sector | | 0.55 |
| Total | 0.475 | 0.53 |

What is the percentage of male pax in the Mumbai - Delhi sector?

a. 40 b. 45 c. 50 d. 60

cat2014 logical-reasoning logic-puzzles

## 2.18.219 Logic Puzzles: CAT 2014 | Question: 39 top

**Directions for Questions:**

Answer the following questions based on the information from an airline about their passengers (pax) in particular sectors is given below: The proportion of males and the proportion of vegetarian pax are given below. The airline has a total of 800 passengers, 80% of whom are in the Mumbai - Delhi sector and rest are equally divided between Mumbai - Hyderabad and Mumbai - Bangalore.

| Sector | Male(M) | Vegetarian (V) |
|---|---|---|
| Mumbai - Bangalore | 0.6 | |
| Mumbai - Hyderabad | 0.55 | 0.5 |
| Mumbai - Delhi sector | | 0.55 |
| Total | 0.475 | 0.53 |

In Mumbai - Bangalore, twenty five per cent of the vegetarians are male. What is the difference between the number of female vegetarians and male non-vegetarians?

A. Less than 8 B. 10 C. 12 D. 16

cat2014 logical-reasoning logic-puzzles

## 2.18.220 Logic Puzzles: CAT 2014 | Question: 39, 40, 41, 42 top

Directions for questions: Answer the questions based on the following information. $A$ and $B$ are two sets (e.g. A = Mothers, B = Women). $C = A.B \implies$ The elements that could belong to both the sets (e.g. women who are mothers) is given by the set $C = A.B.D = A \cup B \implies$ The elements which could belong to either $A$ or $B$, or both, is indicated by the set $D = A \cup B.\phi \implies$ A set that does not contain any elements is known as a null set represented by $\phi$ (e.g. if none of the women in the set $B$ is a mother, then $C = A.B$ is a null set, or $C = \phi$ ).

Let 'V' signify the set of all vertebrates,

'M' the set of all mammals,

'D' dogs, 'F' fish 'A' alsatian and

'P', a dog named Pluto.

Given that $X = M.D$ is such that $X = D$. Which of the following is true?

a. All dogs are mammals
b. Some dogs are mammals
c. $X = \phi$
d. All mammals are dogs

If $Y = F.(D.V)$ is not a null set, it implies that

a. All fish are vertebrates
b. All dogs are vertebrates
c. Some fish are dogs
d. None of these

If $Z = (P.D) \cup M$, then

a. The elements of $Z$ consist of Pluto, the dog, or any other mammal
b. $Z$ implies any dog or mammal
c. $Z$ implies Pluto or any dog that is a mammal
d. $Z$ is a null set

If $P.A = \phi$ and $P \cup A = D$, then which of the following is true?

a. Pluto and alsatians are dogs
b. Pluto is an alsatian
c. Pluto is not an alsatian
d. D is a null set

cat2014 logical-reasoning logic-puzzles

## 2.18.221 Logic Puzzles: CAT 2014 | Question: 40 top

**Directions for Questions:**

Answer the following questions based on the information from an airline about their passengers (pax) in particular sectors is given below: The proportion of males and the proportion of vegetarian pax are given below. The airline has a total of 800 passengers, 80% of whom are in the Mumbai - Delhi sector and rest are equally divided between Mumbai - Hyderabad and Mumbai - Bangalore.

| Sector | Male(M) | Vegetarian (V) |
|---|---|---|
| Mumbai - Bangalore | 0.6 | |
| Mumbai - Hyderabad | 0.55 | 0.5 |
| Mumbai - Delhi sector | | 0.55 |
| Total | 0.475 | 0.53 |

What is the percentage of vegetarian pax in Mumbai - Bangalore?

A. 40 B. 45 C. 50 D. 60

cat2014 logical-reasoning logic-puzzles

Answer key

## 2.18.222 Logic Puzzles: CAT 2014 | Question: 41 top

**Directions for Questions:**

Answer the following questions based on the information from an airline about their passengers (pax) in particular sectors is given below: The proportion of males and the proportion of vegetarian pax are given below. The airline has a total of 800 passengers, 80% of whom are in the Mumbai - Delhi sector and rest are equally divided between Mumbai - Hyderabad and Mumbai - Bangalore.

| Sector | Male(M) | Vegetarian (V) |
|---|---|---|
| Mumbai - Bangalore | 0.6 | |
| Mumbai - Hyderabad | 0.55 | 0.5 |
| Mumbai - Delhi sector | | 0.55 |
| Total | 0.475 | 0.53 |

In the Mumbai - Delhi sector, $50\%$ of the pax are vegetarian males. Which of the following statements is correct?

A. Except vegetarian males, all other groups have same number of pax.
B. Except non-vegetarian males, all other groups have same number of pax.
C. Except vegetarian females, all other groups have same number of pax.
D. None of these.

## 2.18.225 Logic Puzzles: CAT 2015 | Question: 39 top

Answer the questions on the basis of the information given below. A study was conduced to ascertain the relative importance that employees in five different countries assigned to five different traits in their Chief Executive officers. The traits were compassion (C), decisiveness (D), negotiation skills (N), public visibility (P), and vision (V). The level of dissimilarity between two countries is the maximum difference in the ranks allotted by the two countries to any of the five traits. The following table indicates the rank order of the five traits for each country.

| Rank | India | China | Japan | Malaysia | Thailand |
|---|---|---|---|---|---|
| 1 | C | N | D | V | V |
| 2 | P | C | N | D | C |
| 3 | N | P | C | P | N |
| 4 | V | D | V | C | P |
| 5 | D | V | P | N | D |

Which of the following pairs of countries are most dissimilar?

A. China and Japan B. India and Chin C. Malaysia and Japan D. Thailand and Japan

cat2015 logical-reasoning logic-puzzles

## 2.18.226 Logic Puzzles: CAT 2015 | Question: 40 top

Answer the questions on the basis of the information given below. A study was conduced to ascertain the relative importance that employees in five different countries assigned to five different traits in their Chief Executive officers. The traits were compassion (C), decisiveness (D), negotiation skills (N), public visibility (P), and vision (V). The level of dissimilarity between two countries is the maximum difference in the ranks allotted by the two countries to any of the five traits. The following table indicates the rank order of the five traits for each country.

| Rank | India | China | Japan | Malaysia | Thailand |
|---|---|---|---|---|---|
| 1 | C | N | D | V | V |
| 2 | P | C | N | D | C |
| 3 | N | P | C | P | N |
| 4 | V | D | V | C | P |
| 5 | D | V | P | N | D |

Which of the following countries is least dissimilar to India?

A. China B. Japan C. Malaysia D. Thailand

cat2015 logical-reasoning logic-puzzles

## 2.18.227 Logic Puzzles: CAT 2015 | Question: 41 top

Answer the questions on the basis of the information given below. A study was conduced to ascertain the relative importance that employees in five different countries assigned to five different traits in their Chief Executive officers. The traits were compassion (C), decisiveness (D), negotiation skills (N), public visibility (P), and vision (V). The level of dissimilarity between two countries is the maximum difference in the ranks allotted by the two countries to any of the five traits. The following table indicates the rank order of the five traits for each country.

| Rank | India | China | Japan | Malaysia | Thailand |
|---|---|---|---|---|---|
| 1 | C | N | D | V | V |
| 2 | P | C | N | D | C |
| 3 | N | P | C | P | N |
| 4 | V | D | V | C | P |
| 5 | D | V | P | N | D |

Which amongst the following countries is most dissimilar to India?

A. China B. Japan C. Malaysia D. Thailand

cat2015 logical-reasoning logic-puzzles

## 2.18.228 Logic Puzzles: CAT 2015 | Question: 42 top

Answer the questions on the basis of the information given below. A study was conduced to ascertain the relative importance that employees in five different countries assigned to five different traits in their Chief Executive officers. The traits were compassion (C), decisiveness (D), negotiation skills (N), public visibility (P), and vision (V). The level of dissimilarity between two countries is the maximum difference in the ranks allotted by the two countries to any of the five traits. The following table indicates the rank order of the five traits for each country.

| Rank | India | China | Japan | Malaysia | Thailand |
|---|---|---|---|---|---|
| 1 | C | N | D | V | V |
| 2 | P | C | N | D | C |
| 3 | N | P | C | P | N |
| 4 | V | D | V | C | P |
| 5 | D | V | P | N | D |

Three of the following four pairs of countries have identical levels of dissimilarity. Which pair is the odd one out?

A. Malaysia and China
B. China and Thailand
C. Thailand and Japan
D. Japan and Malaysia

cat2015 logical-reasoning logic-puzzles

## 2.18.229 Logic Puzzles: CAT 2015 | Question: 43 top

Answer the questions based on the table given below. The table below gives information about four different crops, their different quality, categories and the regions where they are cultivated. Based on the information given in the table answer the questions below.

| Quality | | Region | | | | |
|---|---|---|---|---|---|---|
| Crop 1 | High | R1, | R2, | R3, | R4, | R5 |
| | Medium | R6, | R7, | R8 | | |
| | Low | R9, | R10, | R11 | | |
| Crop 2 | High | R5, | R8, | R12 | | |
| | Medium | R9, | R13 | | | |
| | Low | R6, | R7, | R8 | | |
| Crop 3 | High | R2, | R6, | R7. | R13 | |
| | Medium | R3, | R9, | R11 | | |
| | Low | R1, | R4 | | | |
| Crop 4 | High | R3, | R10, | R11 | | |
| | Medium | R1, | R2, | R4 | | |
| | Low | R5, | R9 | | | |

How many regions produce medium qualities of Crop-1 and also produce low quality of Crop-3 or Crop-4?

A. Zero
B. One
C. Two
D. Three

cat2015 logical-reasoning logic-puzzles

## 2.18.230 Logic Puzzles: CAT 2015 | Question: 44 top

Answer the questions based on the table given below. The table below gives information about four different crops, their different quality, categories and the regions where they are cultivated. Based on the information given in the table answer the questions below.

| Quality | | Region | | | | |
|---|---|---|---|---|---|---|
| Crop 1 | High | R1, | R2, | R3, | R4, | R5 |
| | Medium | R6, | R7, | R8 | | |
| | Low | R9, | R10, | R11 | | |
| Crop 2 | High | R5, | R8, | R12 | | |
| | Medium | R9, | R13 | | | |
| | Low | R6, | R7, | R8 | | |
| Crop 3 | High | R2, | R6, | R7. | R13 | |
| | Medium | R3, | R9, | R11 | | |
| | Low | R1, | R4 | | | |
| Crop 4 | High | R3, | R10, | R11 | | |
| | Medium | R1, | R2, | R4 | | |
| | Low | R5, | R9 | | | |

Which of the following statements is true?

A. All medium quality Crop-2 producing regions are also high quality Crop-3 producing regions.
B. All high quality Crop-1 producing regions are also medium and low Crop-4 producing regions.
C. There are exactly four Crop-3 producing regions, which also produce Crop-4 but not Crop-2.
D. Some Crop-3 producing regions produce Crop-1, but not high quality Crop-2.

cat2015 logical-reasoning logic-puzzles

## 2.18.231 Logic Puzzles: CAT 2015 | Question: 45 top

Answer the questions based on the table given below. The table below gives information about four different crops, their different quality, categories and the regions where they are cultivated. Based on the information given in the table answer the questions below.

| Quality | | Region | | | | |
|---|---|---|---|---|---|---|
| Crop 1 | High | R1, | R2, | R3, | R4, | R5 |
| | Medium | R6, | R7, | R8 | | |
| | Low | R9, | R10, | R11 | | |
| Crop 2 | High | R5, | R8, | R12 | | |
| | Medium | R9, | R13 | | | |
| | Low | R6, | R7, | R8 | | |
| Crop 3 | High | R2, | R6, | R7. | R13 | |
| | Medium | R3, | R9, | R11 | | |
| | Low | R1, | R4 | | | |
| Crop 4 | High | R3, | R10, | R11 | | |
| | Medium | R1, | R2, | R4 | | |
| | Low | R5, | R9 | | | |

How many low quality Crop-1 producing regions are either high quality Crop-4 producing regions or medium quality Crop-3 producing regions?

A. One B. Two C. Three D. Zero

cat2015 logical-reasoning logic-puzzles

## 2.18.232 Logic Puzzles: CAT 2015 | Question: 46 top

Answer the questions based on the table given below. The table below gives information about four different crops, their different quality, categories and the regions where they are cultivated. Based on the information given in the table answer the questions below.

| Quality | | Region | | | | |
|---|---|---|---|---|---|---|
| Crop 1 | High | R1, | R2, | R3, | R4, | R5 |
| | Medium | R6, | R7, | R8 | | |
| | Low | R9, | R10, | R11 | | |
| Crop 2 | High | R5, | R8, | R12 | | |
| | Medium | R9, | R13 | | | |
| | Low | R6, | R7, | R8 | | |
| Crop 3 | High | R2, | R6, | R7. | R13 | |
| | Medium | R3, | R9, | R11 | | |
| | Low | R1, | R4 | | | |
| Crop 4 | High | R3, | R10, | R11 | | |
| | Medium | R1, | R2, | R4 | | |
| | Low | R5, | R9 | | | |

How many high quality Crop-1 producing regions are low quality Crop-3 producing regions?

A. One B. Two C. Three D. Zero

cat2015 logical-reasoning logic-puzzles

## 2.18.233 Logic Puzzles: CAT 2015 | Question: 47 top

Answer the following questions based on the information given below: In a sports event, six teams (A, B, C, D, E and F) are competing against each other. Matches are scheduled in two stages. Each team plays three matches in stage – I and two matches in Stage – II. No team plays against the same team more than once in the event. No ties are permitted in any of the matches. The observations after the completion of Stage – I and Stage – II are as given below.

Stage-I:

- One team won all the three matches.
- Two teams lost all the matches.
- D lost to A but won against C and F.
- E lost to B but won against C and F.
- B lost at least one match.
- F did not play against the top team of stage-I.

Stage-II:

- The leader of Stage-I lost the next two matches.
- Of the two teams at the bottom after Stage-I, one team won both matches, while the other lost both matches.
- One more team lost both matches in Stage-II.

The two teams that defeated the leader of Stage-I are:

A. F & D
B. E & F
C. B & D
D. E & D
E. F & D

cat2015 logical-reasoning logic-puzzles

## 2.18.234 Logic Puzzles: CAT 2015 | Question: 48 top

Answer the following questions based on the information given below: In a sports event, six teams (A, B, C, D, E and F) are competing against each other. Matches are scheduled in two stages. Each team plays three matches in stage – I and two matches in Stage – II. No team plays against the same team more than once in the event. No ties are permitted in any of the matches. The observations after the completion of Stage – I and Stage – II are as given below.

Stage-I:

- One team won all the three matches.
- Two teams lost all the matches.
- D lost to A but won against C and F.
- E lost to B but won against C and F.
- B lost at least one match.
- F did not play against the top team of stage-I.

Stage-II:

- The leader of Stage-I lost the next two matches.
- Of the two teams at the bottom after Stage-I, one team won both matches, while the other lost both matches.
- One more team lost both matches in Stage-II.

The only team(s) that won both matches in Stage-II is (are):

A. B
B. E & F
C. A, E & F
D. B, E & F
E. B & F

cat2015 logical-reasoning logic-puzzles

## 2.18.235 Logic Puzzles: CAT 2015 | Question: 49 top

Answer the following questions based on the information given below: In a sports event, six teams (A, B, C, D, E and F) are competing against each other. Matches are scheduled in two stages. Each team plays three matches in stage – I and two matches in Stage – II. No team plays against the same team more than once in the event. No ties are permitted in any of the matches. The observations after the completion of Stage – I and Stage – II are as given below.

Stage-I:

- One team won all the three matches.
- Two teams lost all the matches.
- D lost to A but won against C and F.
- E lost to B but won against C and F.
- B lost at least one match.
- F did not play against the top team of stage-I.

Stage-II:

- The leader of Stage-I lost the next two matches.
- Of the two teams at the bottom after Stage-I, one team won both matches, while the other lost both matches.
- One more team lost both matches in Stage-II.

The teams that won exactly two matches in the events are:

A. A, D & F
B. D & E
C. E & F
D. D, E & F
E. D & F

cat2015 logical-reasoning logic-puzzles

## 2.18.236 Logic Puzzles: CAT 2015 | Question: 50 top

Answer the following questions based on the information given below: In a sports event, six teams $(A, B, C, D, E \text{ and } F)$ are competing against each other. Matches are scheduled in two stages. Each team plays three matches in stage – I and two matches in Stage – II. No team plays against the same team more than once in the event. No ties are permitted in any of the matches. The observations after the completion of Stage – I and Stage – II are as given below.

Stage-I:

- One team won all the three matches.
- Two teams lost all the matches.
- $D$ lost to $A$ but won against $C$ and $F$.
- $E$ lost to $B$ but won against $C$ and $F$.
- $B$ lost at least one match.
- $F$ did not play against the top team of stage-I.

Stage-II:

- The leader of Stage-I lost the next two matches.
- Of the two teams at the bottom after Stage-I, one team won both matches, while the other lost both matches.
- One more team lost both matches in Stage-II.

The team(s) with the most wins in the event is (are):

A. $A$ B. $A$ & $C$ C. $F$ D. $E$ E. $B$ & $E$

cat2015 logical-reasoning logic-puzzles

## 2.18.237 Logic Puzzles: CAT 2015 | Question: 59 top

Answer the question on the basis of the information given below.

Coach John sat with the score cards of Indian players from the $3$ games in a one-day cricket tournament where the same set of players played for India and all the major batsmen got out. John summarized the batting performance through a table, one column for each game. In each column, the three entries communicate the number of runs scored by the three top scores from India. The last row in the table denotes the percentage of the total score that was scored by the top three Indians scorers in that game. No two players score the same number of runs in the same game. John also calculated two batting indices for each player based on his scores in the tournaments; the $R$-index of a batsmen is the difference between his highest and lowest scores in the $3$ games while the $M$-index is the middle number, if his scores are arranged in a non-increasing order.

| Player | Pakistan | South Africa | Australia |
|---|---|---|---|
| Yuvraj | 40 | | 87 |
| Virender | 130 | | |
| Kaif | 28 | 51 | |
| Saurav | | 75 | 50 |
| Rahul | | 49 | 55 |
| **Percentage** | **90%** | **70%** | **80%** |

For how many Indian players is it possible to calculate the exact $M$-index?

A. $0$ B. $1$ C. $2$ D. More than $2$

cat2015 logical-reasoning logic-puzzles

## 2.18.238 Logic Puzzles: CAT 2015 | Question: 60 top

Answer the question on the basis of the information given below.

Coach John sat with the score cards of Indian players from the $3$ games in a one-day cricket tournament where the same set of players played for India and all the major batsmen got out. John summarized the batting performance through a table, one column for each game. In each column, the three entries communicate the number of runs scored by the three top scores from India. The last row in the table denotes the percentage of the total score that was scored by the top three Indians scorers in that game. No two players score the same number of runs in the same game. John also calculated two batting indices for each player based on his scores in the tournaments; the $R$-index of a batsmen is the difference between his highest and lowest scores in the $3$ games while the $M$-index is the middle number, if his scores are arranged in a non-increasing order.

| Player | Pakistan | South Africa | Australia |
|---|---|---|---|
| Yuvraj | 40 | | 87 |
| Virender | 130 | | |
| Kaif | 28 | 51 | |
| Saurav | | 75 | 50 |
| Rahul | | 49 | 55 |
| **Percentage** | **90%** | **70%** | **80%** |

Among the players mentioned, who can have the lowest R-index from the tournament?

A. Only Kaif, Rahul or Yuvraj
B. Only Kaif or Rahul
C. Only Kaif or Yuvraj
D. Only Kaif

cat2015 logical-reasoning logic-puzzles

## 2.18.239 Logic Puzzles: CAT 2015 | Question: 61 top

Answer the question on the basis of the information given below.

Coach John sat with the score cards of Indian players from the 3 games in a one-day cricket tournament where the same set of players played for India and all the major batsmen got out. John summarized the batting performance through a table, one column for each game. In each column, the three entries communicate the number of runs scored by the three top scores from India. The last row in the table denotes the percentage of the total score that was scored by the top three Indians scorers in that game. No two players score the same number of runs in the same game. | Saurav | | 75 | 50 |
| Rahul | | 49 | 55 |
| **Percentage** | **90%** | **70%** | **80%** |

How many players among those listed definitely scored less than Yuvraj in the tournament?

A. 0
B. 1
C. 2
D. More than 2

cat2015 logical-reasoning logic-puzzles

## 2.18.240 Logic Puzzles: CAT 2015 | Question: 62 top

Answer the question on the basis of the information given below.

Coach John sat with the score cards of Indian players from the 3 games in a one-day cricket tournament where the same set of players played for India and all the major batsmen got out. John summarized the batting performance through a table, one column for each game. In each column, the three entries communicate the number of runs scored by the three top scores from India. The last row in the table denotes the percentage of the total score that was scored by the top three Indians scorers in that game. No two players score the same number of runs in the same game. John also calculated two batting indices for each player based on his scores in the tournaments; the R-index of a batsmen is the difference between his highest and lowest scores in the 3 games while the M-index is the middle number, if his scores are arranged in a non-increasing order.

| Player | Pakistan | South Africa | Australia |
|---|---|---|---|
| Yuvraj | 40 | | 87 |
| Virender | 130 | | |
| Kaif | 28 | 51 | |
| Saurav | | 75 | 50 |
| Rahul | | 49 | 55 |
| **Percentage** | **90%** | **70%** | **80%** |

Which of the players had the best M-index from the tournament?

A. Rahul B. Saurav C. Virender D. Yuvraj

## 2.18.241 Logic Puzzles: CAT 2016 | Question: 35 top

Answer the question on the basis of the following information:

Recently, the answers of a test held nationwide were leaked to a group of unscrupulous people. The investigative agency has arrested the mastermind and nine other people A, B, C, D, E, F, G, H and I in this matter. Interrogating them, the following facts have been obtained regarding their operation. Initially the mastermind obtains the correct answer-key. All the others create their answer-key from one or two people who already possess the same. These people are called his/her "sources". If the person has two sources, then he/she compares the answer- keys obtained from both sources. If the key to a question from both sources is identical, it is copied, otherwise it is left blank. If the person has only one source, he/she copies the source's answers into his/her copy. Finally, each person compulsorily replaces one of the answers (not a blank one) with a wrong answer in his/her answer key.

The paper contained 200 questions; so the investigative agency has ruled out the possibility of two or more of them introducing wrong answers to the same question. The investigative agency has a copy of the correct answer key and has tabulated the following data. These data represent question numbers.

| Name | Wrong Answer (s) | Blank Answer (s) |
|---|---|---|
| A | 46 | – – – |
| B | 96 | 46, 90, 25 |
| C | 27, 56 | 17, 46, 90 |
| D | 17 | – – – |
| E | 46, 90 | – – – |
| F | 14, 46 | 92, 90 |
| G | 25 | – – – |
| H | 46, 92 | – – – |
| I | 27 | 17, 26, 90 |

Which one among the following must have two sources?

A. A B. B C. C D. D

## 2.18.245 Logic Puzzles: CAT 2016 | Question: 40 top

The table below gives information about four different crops, their different quality categories and the regions where they are cultivated. Based on the information given in the table answer the questions given below.

Type of Crops with Quality and Region

| | | | | |
|---|---|---|---|---|
| Crop-1 | ⇒ | High R1, R2, R3, R4, R5 | Medium R6, R7, R8 | Low R9, R10, R11 |
| Crop-2 | ⇒ | High R5, R8, R12 | Medium R9, R13 | Low R6 |
| Crop-3 | ⇒ | High R2, R6, R7, R13 | Medium R3, R9, R11 | Low R1, R4 |
| Crop-4 | ⇒ | High R3, R10, R11 | Medium R1, R2, R4 | Low R5, R9 |

Which of the following statement is true?

A. All medium quality Crop-2 producing regions are also high quality Crop-3 producing regions.
B. All high quality Crop-1 producing regions are also medium and low Crop-4 producing regions..
C. There are exactly five Crop-3 producing regions, which also produce Crop-4 but not Crop-2.
D. Some Crop-3, producing regions produce Crop-1, and high quality Crop-2.

## 2.18.246 Logic Puzzles: CAT 2016 | Question: 43 top

A study was conducted to ascertain the relative importance that employees in five different countries assigned to five different traits in their Chief Executive Officers. The traits were compassion (C), decisiveness (D), negotiation skills (N), public

visibility (P), and vision (V). The level of dissimilarity between two countries is the maximum difference in the ranks allotted by the two countries to any of the five traits. The following table indicates the rank order of the five traits for each country.

| Rank | India | China | Japan | Malaysia | Thailand |
|---|---|---|---|---|---|
| 1 | C | N | D | V | V |
| 2 | P | C | N | D | C |
| 3 | N | P | C | P | N |
| 4 | V | D | V | C | P |
| 5 | D | V | P | N | D |

Three of the following four pairs of countries have identical levels of dissimilarity. Which pair is the odd one out?

A. Malaysia & China
B. China & Thailand
C. Thailand & Japan
D. Japan & Malaysia

## 2.18.250 Logic Puzzles: CAT 2016 | Question: 51 top

The year was 2006. All six teams in Pool A of World Cup hockey, play each other exactly once. Each win earns a team three points, a draw earns one point and a loss earns zero points. The two teams with the highest points qualify for the semi-finals. In case of a tie, the team with the highest goal difference (Goal For – Goals Against) qualifies.

In the opening match, Spain lost to Germany. After the second round (after each team played two matches), the pool table looked as shown below and no match was a draw.

| Teams | Games Played | Won | Goals For | Goals Against | Point |
|---|---|---|---|---|---|
| Germany | 2 | 2 | 3 | 1 | 6 |
| Argentina | 2 | 2 | 2 | 0 | 6 |
| Spain | 2 | 1 | 5 | 2 | 3 |
| Pakistan | 2 | 1 | 2 | 1 | 3 |
| New Zealand | 2 | 0 | 1 | 6 | 0 |
| South Africa | 2 | 0 | 1 | 4 | 0 |

In the third round, Spain played Pakistan, Argentina played Germany, and New Zealand played South Africa. All the third round matches were drawn. The following are some results from the fourth and fifth round matches.

a. Spain won both the fourth and fifth round matches.
b. Both Argentina and Germany won their fifth round matches by 3 goals to 0.
c. Pakistan won both the fourth and fifth round matches by 1 goal to 0.

Which one of the following statements is true about matches played in the first two rounds?

A. Pakistan beat South Africa by 2 goals to 1.
B. Argentina beat Pakistan by 1 goal to 0.
C. Germany beat Pakistan by 2 goals to 1.
D. Germany beat Spain by 2 goals to 1.

cat2016 logical-reasoning logic-puzzles

## 2.18.254 Logic Puzzles: CAT 2016 | Question: 55 top

Venkat, a stockbroker, invested a part of his money in the stock of four companies - A, B, C and D. Each of these companies belonged to different industries, viz., Cement, Information Technology (IT), Auto, and Steel, in no particular order. At the time of investment, the price of each stock was Rs.100. Venkat purchased only one stock of each of these companies. He was expecting returns of $20\%, 10\%, 30\%$, and $40\%$ from the stock of companies A, B, C and D, respectively. Returns arc defined as the change in the value of the stock after one year, expressed as a percentage of the initial value. During the year, two of these companies announced extraordinarily good results. One of these two companies belonged to the Cement or the IT industry, while the other one belonged to either the Steel or the Auto industry. As a result, the returns on the stocks of these two companies were higher than the initially expected returns. For the company belonging to the Cement or the IT industry with extraordinarily good results, the returns were twice that of the initially expected returns. For the company belonging to the Steel or the Auto industry, the returns on announcement of extraordinarily good results were only one and a half times that of the initially expected returns. For the remaining two companies, which did not announce extraordinarily good results, the returns realized during the year were the same as initially expected.

What is the minimum average return Venkat would have earned during the year?

A. $30\%$
B. $31.25\%$
C. $32.5\%$
D. Cannot be determined

cat2016 logical-reasoning logic-puzzles

## 2.18.255 Logic Puzzles: CAT 2016 | Question: 56 top

Venkat, a stockbroker, invested a part of his money in the stock of four companies - A, B, C and D. Each of these companies belonged to different industries, viz., Cement, Information Technology (IT), Auto, and Steel, in no particular order. At the time of investment, the price of each stock was Rs.100. Venkat purchased only one stock of each of these companies. He was expecting returns of $20\%, 10\%, 30\%$, and $40\%$ from the stock of companies A, B, C and D, respectively. Returns arc defined as the change in the value of the stock after one year, expressed as a percentage of the initial value. During the year, two of these companies announced extraordinarily good results. One of these two companies belonged to the Cement or the IT industry, while the other one belonged to either the Steel or the Auto industry. As a result, the returns on the stocks of these two companies were higher than the initially expected returns. For the company belonging to the Cement or the IT industry with extraordinarily good results, the returns were twice that of the initially expected returns. For the company belonging to the Steel or the Auto industry, the returns on announcement of extraordinarily good results were only one and a half times that of the initially expected returns. For the remaining two companies, which did not announce extraordinarily good results, the returns realized during the year were the same as initially expected.

If Venkat earned a $35\%$ return on average during the year, then which of these statements would necessarily be true?

I. Company A belonged either to Auto or to Steel Industry.

II. Company B did not announce extraordinarily good results.
III. Company A announced extraordinarily good results.
IV. Company D did not announce extraordinarily good results.

A. I and II only B. II and III only C. I and IV only D. II and IV only

cat2016 logical-reasoning logic-puzzles

## 2.18.256 Logic Puzzles: CAT 2016 | Question: 57 top

Venkat, a stockbroker, invested a part of his money in the stock of four companies - A, B, C and D. Each of these companies belonged to different industries, viz., Cement, Information Technology (IT), Auto, and Steel, in no particular order. At the time of investment, the price of each stock was Rs.100. Venkat purchased only one stock of each of these companies. He was expecting returns of $20\%, 10\%, 30\%$, and $40\%$ from the stock of companies A, B, C and D, respectively. Returns arc defined as the change in the value of the stock after one year, expressed as a percentage of the initial value. During the year, two of these companies announced extraordinarily good results. One of these two companies belonged to the Cement or the IT industry, while the other one belonged to either the Steel or the Auto industry. As a result, the returns on the stocks of these two companies were higher than the initially expected returns. For the company belonging to the Cement or the IT industry with extraordinarily good results, the returns were twice that of the initially expected returns. For the company belonging to the Steel or the Auto industry, the returns on announcement of extraordinarily good results were only one and a half times that of the initially expected returns. For the remaining two companies, which did not announce extraordinarily good results, the returns realized during the year were the same as initially expected.

If Venkat earned a $38.75\%$ return on average during the year, then which of these statement(s) would necessarily be true?

I. Company C belonged either to Auto or to Steel Industry.
II. Company D belonged either to Auto or to Steel Industry.
III. Company A announced extraordinarily good results.
IV. Company B did not announce extraordinarily good results.

A. I and II only B. II and III only C. I and IV only D. II and IV only

## 2.18.257 Logic Puzzles: CAT 2016 | Question: 58 top

Venkat, a stockbroker, invested a part of his money in the stock of four companies - A, B, C and D. Each of these companies belonged to different industries, viz., Cement, Information Technology (IT), Auto, and Steel, in no particular order. At the time of investment, the price of each stock was Rs.100. Venkat purchased only one stock of each of these companies. He was expecting returns of $20\%, 10\%, 30\%$, and $40\%$ from the stock of companies A, B, C and D, respectively. Returns arc defined as the change in the value of the stock after one year, expressed as a percentage of the initial value. During the year, two of these companies announced extraordinarily good results. One of these two companies belonged to the Cement or the IT industry, while the other one belonged to either the Steel or the Auto industry. As a result, the returns on the stocks of these two companies were higher than the initially expected returns. For the company belonging to the Cement or the IT industry with extraordinarily good results, the returns were twice that of the initially expected returns. For the company belonging to the Steel or the Auto industry, the returns on announcement of extraordinarily good results were only one and a half times that of the initially expected returns. For the remaining two companies, which did not announce extraordinarily good results, the returns realized during the year were the same as initially expected.

If Company C belonged to the Cement or the IT industry and did announce extraordinarily good results, then which of these statement(s) would necessarily be true?

I. Venkat earned not more than $36.25\%$ return on average.
II. Venkat earned not less than $33.75\%$ return on average.
III. If Venkat earned $33.75\%$ return on average, Company A announced extraordinarily good results.
IV. If Venkat earned $33.75\%$ return on average, Company B belonged either to Auto or to Steel Industry.

A. I and II only B. II and IV only C. II and III only D. III and IV only

cat2016 logical-reasoning logic-puzzles

## 2.18.258 Logic Puzzles: CAT 2016 | Question: 59 top

The year is $2089$. Beijing, London, New York, and Paris are in contention to host the $2096$ Olympics. The eventual winner is determined through several rounds of voting by members of the IOC with each member representing a different city. All the four cities in contention are also represented in IOC. In any round of voting, the city receiving the lowest number of votes in that round gets eliminated. The survivor after the last round of voting gets to host the event. A member is allowed to east votes for at most two different cities in all rounds of voting combined. (Hence, a member becomes ineligible to cast a vote in a given

round if both the cities (s)he voted for in earlier rounds are out of contention in that round of voting). A member is also ineligible to cast a vote in a round if the city (s)he represents is in contention in that round of voting. As long as the member is eligible, (s)he must vote and vote for only one candidate city in any round of voting. The following incomplete table shows the information on cities that received the maximum and minimum votes in different rounds, the number of votes cast in their favour, and the total votes that were cast in those rounds.

| Round | Total votes cast | Maximum votes cast | | Eliminated | |
|---|---|---|---|---|---|
| | | City | No. of votes | City | No. of votes |
| 1 | | London | 30 | New York | 12 |
| 2 | 83 | Paris | 32 | Beijing | 21 |
| 3 | 75 | | | | |

It is also known that: All those who voted for London and Paris in round $1$, continued to vote for the same cities in subsequent rounds as long as these cities were in contention. $75\%$ of those who voted for Beijing in round $1$, voted for Beijing in round $2$ as well. Those who voted for New York in round $1$, voted either for Beijing or Paris in round $2$. The difference in votes cast for the two contending cities in the last round was $1.50\%$ of those who voted for Beijing in round $1$, voted for Paris in round $3$.

What percentage of members from among those who voted for New York in round $1$, voted for Beijing in round $2$?

A. $33.33$ B. $50$ C. $66.67$ D. $75$

cat2016 logical-reasoning logic-puzzles

## 2.18.259 Logic Puzzles: CAT 2016 | Question: 60 top

The year is $2089$. Beijing, London, New York, and Paris are in contention to host the $2096$ Olympics. The eventual winner is determined through several rounds of voting by members of the IOC with each member representing a different city. All the four cities in contention are also represented in IOC. In any round of voting, the city receiving the lowest number of votes in that round gets eliminated. The survivor after the last round of voting gets to host the event. A member is allowed to east votes for at most two different cities in all rounds of voting combined. (Hence, a member becomes ineligible to cast a vote in a given round if both the cities (s)he voted for in earlier rounds are out of contention in that round of voting). A member is also ineligible to cast a vote in a round if the city (s)he represents is in contention in that round of voting. As long as the member is eligible, (s)he must vote and vote for only one candidate city in any round of voting. The following incomplete table shows the information on cities that received the maximum and minimum votes in different rounds, the number of votes cast in their favour, and the total votes that were cast in those rounds.

| Round | Total votes cast | Maximum votes cast | | Eliminated | |
|---|---|---|---|---|---|
| | | City | No. of votes | City | No. of votes |
| 1 | | London | 30 | New York | 12 |
| 2 | 83 | Paris | 32 | Beijing | 21 |
| 3 | 75 | | | | |

It is also known that: All those who voted for London and Paris in round $1$, continued to vote for the same cities in subsequent rounds as long as these cities were in contention. $75\%$ of those who voted for Beijing in round $1$, voted for Beijing in round $2$ as well. Those who voted for New York in round $1$, voted either for Beijing or Paris in round $2$. The difference in votes cast for the two contending cities in the last round was $1.50\%$ of those who voted for Beijing in round $1$, voted for Paris in round $3$.

What is the number of votes cast for Paris in round $1$?

A. $16$ B. $18$ C. $22$ D. $24$

The difference in votes cast for the two contending cities in the last round was $1$. $50\%$ of those who voted for Beijing in round $1$, voted for Paris in round $3$.

Which of the following statements must be true?

a. IOC member from New York must have voted for London in round 2.
b. IOC member from Beijing voted for London in round 3.

A. Only a B. Only b C. Both a and b D. Neither a nor b

cat2016 logical-reasoning logic-puzzles

## 2.18.262 Logic Puzzles: CAT 2017 Set-1 | Question: 35 top

Read the information carefully and answer the question:

Healthy Bites is a fast food joint serving three items: burgers, fries and ice cream. It has two employees Anish and Bani who prepare the items ordered by the clients. Preparation time is $10$ minutes for a burger and $2$ minutes for an order of ice cream. An employee can prepare only one of these items at a time. The fries are prepared in an automatic fryer which can prepare up to $3$ portions of fries at a time, and takes $5$ minutes irrespective of the number of portions. The fryer does not need an employee to constantly attend to it, and we can ignore the time taken by an employee to start and stop the fryer; thus, an employee can be engaged in preparing other items while the frying is on. However fries cannot be prepared in anticipation of future orders.

Healthy Bites wishes to serve the orders as early as possible. The individual items in any order are served as and when ready; however, the order is considered to be completely served only when all the items of that order are served.

The table below gives the orders of three clients and the times at which they placed their orders;

| Client No. | Time | Order |
|---|---|---|
| 1 | 10.00 | 1 burger, 3 portions of fries, 1 order of icecream |
| 2 | 10.05 | 2 portions of fries, 1 order of ice cream |
| 3 | 10.07 | 1 burger, 1 portion of fries |

Assume that only one client's order can be processed at any point of time. So, Anish or Bani cannot start preparing a new order while a previous order is being prepared.

At what time is the order placed by Client 1 completely served?

A. 10 : 17 B. 10 : 10 C. 10 : 15 D. 10 : 20

cat2017-1 logical-reasoning logic-puzzles

## 2.18.263 Logic Puzzles: CAT 2017 Set-1 | Question: 36 top

Read the information carefully and answer the question:

Healthy Bites is a fast food joint serving three items: burgers, fries and ice cream. It has two employees Anish and Bani who prepare the items ordered by the clients. Preparation time is 10 minutes for a burger and 2 minutes for an order of ice cream. An employee can prepare only one of these items at a time. The fries are prepared in an automatic fryer which can prepare up to 3 portions of fries at a time, and takes 5 minutes irrespective of the number of portions. The fryer does not need an employee to constantly attend to it, and we can ignore the time taken by an employee to start and stop the fryer; thus, an employee can be engaged in preparing other items while the frying is on. | 3 | 10.07 | 1 burger, 1 portion of fries |

Assume that only one client's order can be processed at any point of time. So, Anish or Bani cannot start preparing a new order while a previous order is being prepared?

At what time is the order placed by Client 3 completely served?

A. 10 : 35 B. 10 : 22 C. 10 : 25 D. 10 : 17

cat2017-1 logical-reasoning logic-puzzles

## 2.18.264 Logic Puzzles: CAT 2017 Set-1 | Question: 37 top

Read the information carefully and answer the question:

Healthy Bites is a fast food joint serving three items: burgers, fries and ice cream. It has two employees Anish and Bani who prepare the items ordered by the clients. Preparation time is 10 minutes for a burger and 2 minutes for an order of ice cream. An employee can prepare only one of these items at a time. The fries are prepared in an automatic fryer which can prepare up to 3 portions of fries at a time, and takes 5 minutes irrespective of the number of portions. The fryer does not need an employee to constantly attend to it, and we can ignore the time taken by an employee to start and stop the fryer; thus, an employee can be engaged in preparing other items while the frying is on. However fries cannot be prepared in anticipation of future orders.

Healthy Bites wishes to serve the orders as early as possible. The individual items in any order are served as and when ready; however, the order is considered to be completely served only when all the items of that order are served.

The table below gives the orders of three clients and the times at which they placed their orders;

| Client No. | Time | Order |
|---|---|---|
| 1 | 10.00 | 1 burger, 3 portions of fries, 1 order of icecream |
| 2 | 10.05 | 2 portions of fries, 1 order of ice cream |
| 3 | 10.07 | 1 burger, 1 portion of fries |

Suppose the employees are allowed to process multiple orders at a time, but the preference would be to finish orders of clients who placed their orders earlier.

At what time is the order placed by Client 2 completely served?

A. 10 : 10 B. 10 : 12 C. 10 : 15 D. 10 : 17

cat2017-1 logical-reasoning logic-puzzles

## 2.18.265 Logic Puzzles: CAT 2017 Set-1 | Question: 38 top

Read the information carefully and answer the question:

Healthy Bites is a fast food joint serving three items: burgers, fries and ice cream. It has two employees Anish and Bani who prepare the items ordered by the clients. Preparation time is 10 minutes for a burger and 2 minutes for an order of ice cream. An employee can prepare only one of these items at a time. The fries are prepared in an automatic fryer which can prepare up to 3 portions of fries at a time, and takes 5 minutes irrespective of the number of portions. The fryer does not need an employee to constantly attend to it, and we can ignore the time taken by an employee to start and stop the fryer; thus, an employee can be engaged in preparing other items while the frying is on. However fries cannot be prepared in anticipation of future orders.

Healthy Bites wishes to serve the orders as early as possible. The individual items in any order are served as and when ready; however, the order is considered to be completely served only when all the items of that order are served.

The table below gives the orders of three clients and the times at which they placed their orders;

| Client No. | Time | Order |
|---|---|---|
| 1 | 10.00 | 1 burger, 3 portions of fries, 1 order of icecream |
| 2 | 10.05 | 2 portions of fries, 1 order of ice cream |
| 3 | 10.07 | 1 burger, 1 portion of fries |

Suppose the employees are allowed to process multiple orders at a time, but the preference would be to finish orders of clients who placed their orders earlier.

Also assume that the fourth client came in only at $10:35$. Between $10:00$ and $10:30$, for how many minutes is exactly one of the employees idle?

A. 7 B. 10 C. 15 D. 23

cat2017-1 logical-reasoning logic-puzzles

## 2.18.266 Logic Puzzles: CAT 2017 Set-1 | Question: 51 top

There are 21 employees working in a division out of whom 10 are special-skilled employees (SE) and the remaining are regular skilled employees (RE). During the next five months, the division has to complete five projects every month. Out of the 25 projects, 5 projects are "challenging", while the remaining ones are "standard". Each of the challenging projects has to be completed in different months. Every month, five teams – T1, T2, T3, T4 and T5, work on one project each. T1, T2, T3, T4 nd T5 are allotted the challenging project in the first, second, third, fourth and fifth month, respectively. The team assigned the challenging project has one more employee than the rest.

In the first month, T1 has one more SE than T2, T2 has one more SE than T3, T3 has one more SE than T4, and T4 has one more SE than T5. Between two successive months, the composition of the teams changes as follows:

a. The team allotted the challenging project gets one SE from each of the teams allotted the standard projects in the previous month and in exchange, it releases one SE and one RE each, who will be allotted the next month's challenging project.

Each standard project has a total of 100 credit points, while each challenging project has 200 credit points. The credit points are equally shared between the employees included in that team.

The number of times in which the composition of team T2 and the number of times in which composition of team T4 remained unchanged in two successive months are:

A. $(2,1)$ B. $(1,0)$ C. $(0,0)$ D. $(1,1)$

cat2017-1 logical-reasoning logic-puzzles

## 2.18.267 Logic Puzzles: CAT 2017 Set-1 | Question: 52 top

There are 21 employees working in a division out of whom 10 are special-skilled employees (SE) and the remaining are regular skilled employees (RE). During the next five months, the division has to complete five projects every month. Out of the 25 projects, 5 projects are "challenging", while the remaining ones are "standard". Each of the challenging projects has to be completed in different months. Every month, five teams – T1, T2, T3, T4 and T5, work on one project each. T1, T2, T3, T4 nd T5 are allotted the challenging project in the first, second, third, fourth and fifth month, respectively. The team assigned the challenging project has one more employee than the rest.

In the first month, T1 has one more SE than T2, T2 has one more SE than T3, T3 has one more SE than T4, and T4 has one more SE than T5. Between two successive months, the composition of the teams changes as follows:

a. The team allotted the challenging project, gets two SE from the team which was allotted the challenging project in the previous month. In exchange, one RE is shifted from the former team to the latter team.
b. After the above exchange, if T1 has any SE and T5 has any RE, then one SE is shifted from T1 to T5, and one RE is shifted from T5 to T1. Also, if T2 has any SE and T4 has any RE, then one SE is shifted from T2 to T4, and one RE is shifted from T4 to T2.

Each standard project has a total of 100 credit points, while each challenging project has 200 credit points. The credit points are equally shared between the employees included in that team.

The number of SE in T1 and T5 for the projects in the third month are, respectively:

A. $(0, 2)$ B. $(0, 3)$ C. $(1, 2)$ D. $(1, 3)$

cat2017-1 logical-reasoning logic-puzzles

## 2.18.268 Logic Puzzles: CAT 2017 Set-1 | Question: 53 top

There are 21 employees working in a division out of whom 10 are special-skilled employees (SE) and the remaining are regular skilled employees (RE). During the next five months, the division has to complete five projects every month. Out of the 25 projects, 5 projects are "challenging", while the remaining ones are "standard". Each of the challenging projects has to be completed in different months. Every month, five teams – T1, T2, T3, T4 and T5, work on one project each. T1, T2, T3, T4 nd T5 are allotted the challenging project in the first, second, third, fourth and fifth month, respectively. The team assigned the challenging project has one more employee than the rest.

In the first month, T1 has one more SE than T2, T2 has one more SE than T3, T3 has one more SE than T4, and T4 has one more SE than T5. Between two successive months, the composition of the teams changes as follows:

A. The team allotted the challenging project, gets two SE from the team which was allotted the challenging project in the previous month. In exchange, one RE is shifted from the former team to the latter team.
B. After the above exchange, if T1 has any SE and T5 has any RE, then one SE is shifted from T1 to T5, and one RE is shifted from T5 to T1. Also, if T2 has any SE and T4 has any RE, then one SE is shifted from T2 to T4, and one RE is shifted from T4 to T2.

Each standard project has a total of 100 credit points, while each challenging project has 200 credit points. The credit points are equally shared between the employees included in that team.

Which of the following CANNOT be the total credit points earned by any employee from the projects?

A. 140 B. 150 C. 170 D. 200

cat2017-1 logical-reasoning logic-puzzles

## 2.18.269 Logic Puzzles: CAT 2017 Set-1 | Question: 54 top

There are 21 employees working in a division out of whom 10 are special-skilled employees (SE) and the remaining are regular skilled employees (RE). During the next five months, the division has to complete five projects every month. Out of the 25 projects, 5 projects are "challenging", while the remaining ones are "standard". Each of the challenging projects has to be completed in different months. Every month, five teams – T1, T2, T3, T4 and T5, work on one project each. T1, T2, T3, T4 nd T5 are allotted the challenging project in the first, second, third, fourth and fifth month, respectively. The team assigned the challenging project has one more employee than the rest.

In the first month, T1 has one more SE than T2, T2 has one more SE than T3, T3 has one more SE than T4, and T4 has one more SE than T5. Between two successive months, the composition of the teams changes as follows:

a. The team allotted the challenging project, gets two SE from the team which was allotted the challenging project in the previous month. In exchange, one RE is shifted from the former team to the latter team.
b. After the above exchange, if T1 has any SE and T5 has any RE, then one SE is shifted from T1 to T5, and one RE is shifted from T5 to T1. Also, if T2 has any SE and T4 has any RE, then one SE is shifted from T2 to T4, and one RE is shifted from T4 to T2.

Each standard project has a total of 100 credit points, while each challenging project has 200 credit points. The credit points are equally shared between the employees included in that team.

One of the employees named Aneek scored 185 points. Which of the following CANNOT be true?

A. Aneek worked only in teams T1, T2. T3 and T4
B. Aneek worked only in teams T1, T2, T4, and T5
C. Aneek worked only in teams T2, T3, T4, and T5
D. Aneek worked only in teams T1, T3 T4, and T5

cat2017-1 logical-reasoning logic-puzzles

## 2.18.270 Logic Puzzles: CAT 2017 Set-1 | Question: 55 top

In a square layout of size $5\text{ m} \times 5\text{ m}$, 25 equal sized square platforms of different heights are built. The heights (in metres) of individual platforms are as shown below:

$$\begin{array}{ccccc} 6 & 1 & 2 & 4 & 3 \\ 9 & 5 & 3 & 2 & 8 \\ 7 & 8 & 4 & 6 & 5 \\ 3 & 9 & 5 & 1 & 2 \\ 1 & 7 & 6 & 3 & 9 \end{array}$$

Individuals (all of same height) are seated on these platforms. We say an individual $\mathrm{A}$ can reach an individual $\mathrm{B}$ if all the three following conditions are met:

I. $\mathrm{A}$ and $\mathrm{B}$ are in the same row or column
II. $\mathrm{A}$ is at a lower height than $\mathrm{B}$
III. If there is/are any individuals(s) between $\mathrm{A}$ and $\mathrm{B}$, such Individual(s) must be at a height tower than that of $\mathrm{A}$.

Thus in the table given above, consider the Individual seated at height $8$ on 3rd row and 2nd column. He can be reached by four individuals. He can be reached by the individual on his left at height 7, by the two individuals on his right at heights of $4$ and $6$ and by the individual above at height $5$.

Rows in the layout are numbered from top to bottom and columns are numbered from left to right.

How many individuals in this layout can be reached by just one individual?

A. 3 B. 5 C. 7 D. 8

cat2017-1 logical-reasoning logic-puzzles

## 2.18.271 Logic Puzzles: CAT 2017 Set-1 | Question: 56 top

In a square layout of size $5\ \mathrm{m} \times 5\ \mathrm{m}, 25$ equal sized square platforms of different heights are built. The heights (in metres) of individual platforms are as shown below:

$$\begin{array}{ccccc} 6 & 1 & 2 & 4 & 3 \\ 9 & 5 & 3 & 2 & 8 \\ 7 & 8 & 4 & 6 & 5 \\ 3 & 9 & 5 & 1 & 2 \\ 1 & 7 & 6 & 3 & 9 \end{array}$$

Individuals (all of same height) are seated on these platforms. We say an individual $\mathrm{A}$ can reach an individual $\mathrm{B}$ if all the three following conditions are met:

I. $\mathrm{A}$ and $\mathrm{B}$ are in the same row or column
II. $\mathrm{A}$ is at a lower height than $\mathrm{B}$
III. If there is/are any individuals(s) between $\mathrm{A}$ and $\mathrm{B}$, such Individual(s) must be at a height tower than that of $\mathrm{A}$.

Thus in the table given above, consider the Individual seated at height $8$ on 3rd row and 2nd column. He can be reached by four individuals. He can be reached by the individual on his left at height 7, by the two individuals on his right at heights of $4$ and $6$ and by the individual above at height $5$.

Rows in the layout are numbered from top to bottom and columns are numbered from left to right.

Which of the following is true for any individual at a platform of height $1$ m in this layout?

A. They can be reached by all the individuals in their own row and column
B. They can be reached by at least $4$ individuals
C. They can be reached by at least one individual
D. They cannot be reached by anyone

cat2017-1 logical-reasoning logic-puzzles

## 2.18.272 Logic Puzzles: CAT 2017 Set-1 | Question: 57 top

In a square layout of size $5\ \mathrm{m} \times 5\ \mathrm{m}, 25$ equal sized square platforms of different heights are built. The heights (in metres) of individual platforms are as shown below:

| | | | | |
|---|---|---|---|---|
| 6 | 1 | 2 | 4 | 3 |
| 9 | 5 | 3 | 2 | 8 |
| 7 | 8 | 4 | 6 | 5 |
| 3 | 9 | 5 | 1 | 2 |
| 1 | 7 | 6 | 3 | 9 |

Individuals (all of same height) are seated on these platforms. We say an individual A can reach an individual B if all the three following conditions are met:

I. A and B are in the same row or column
II. A is at a lower height than B
III. If there is/are any individuals(s) between A and B, such Individual(s) must be at a height tower than that of A.

Thus in the table given above, consider the Individual seated at height 8 on 3rd row and 2nd column. He can be reached by four individuals. He can be reached by the individual on his left at height 7, by the two individuals on his right at heights of 4 and 6 and by the individual above at height 5.

Rows in the layout are numbered from top to bottom and columns are numbered from left to right.

We can find two individuals who cannot be reached by anyone in

A. the last row
B. the fourth row
C. the fourth column
D. the middle column

cat2017-1 logical-reasoning logic-puzzles

## 2.18.273 Logic Puzzles: CAT 2017 Set-1 | Question: 58 top

In a square layout of size $5\text{ m} \times 5\text{ m}, 25$ equal sized square platforms of different heights are built. The heights (in metres) of individual platforms are as shown below:

| | | | | |
|---|---|---|---|---|
| 6 | 1 | 2 | 4 | 3 |
| 9 | 5 | 3 | 2 | 8 |
| 7 | 8 | 4 | 6 | 5 |
| 3 | 9 | 5 | 1 | 2 |
| 1 | 7 | 6 | 3 | 9 |

Individuals (all of same height) are seated on these platforms. We say an individual A can reach an individual B if all the three following conditions are met:

I. A and B are in the same row or column
II. A is at a lower height than B
III. If there is/are any individuals(s) between A and B, such Individual(s) must be at a height tower than that of A.

Thus in the table given above, consider the Individual seated at height 8 on 3rd row and 2nd column. He can be reached by four individuals. He can be reached by the individual on his left at height 7, by the two individuals on his right at heights of 4 and 6 and by the individual above at height 5.

Rows in the layout are numbered from top to bottom and columns are numbered from left to right.

Which of the following statements is true about this layout?

A. Each row has an individual who can be reached by 5 or more individuals
B. Each row has an individual who cannot be reached by anyone
C. Each row has at least two individuals who can be reached by an equal number of individuals
D. All individuals at the height of 9 m can be reached by at least 5 individuals

cat2017-1 logical-reasoning logic-puzzles

## 2.18.274 Logic Puzzles: CAT 2017 Set-1 | Question: 62 top

A new airlines company is planning to start operations in a country. The company has identified ten different cities which they plan to connect through their network to start with. The flight duration between any pair of cities will be less than one hour. To start operations, the company has to decide on a daily schedule.

The underlying principle that they are working on is the following:

Any person staying in any of these $10$ cities should be able to make a trip to any other city in the morning and should be able to return by the evening of the same day.

Suppose the $10$ cities are divided into $4$ distinct groups $G1, G2, G3, G4$ having $3, 3, 2$ and $2$ cities respectively and that $G1$ consists of cities named $A$, $B$ and $C$. Further, suppose that direct flights are allowed only between two cities satisfying one of the following:

a. Both cities are in $G1$ b. Between $A$ and any city in $G2$ c. Between $B$ and any city in $G3$ d. Between $C$ and any city in $G4$

However, due to operational difficulties at $A$, it was later decided that the only flights that would operate at $A$ would be those to and from $B$. Cities in $G2$ would have to be assigned to $G3$ or to $G4$.

What would be the maximum reduction in the number of direct flights as compared to the situation before the operational difficulties arose?

A. None of these B. $3$ C. $0$ D. $1$

cat2017-1 logical-reasoning logic-puzzles

## 2.18.275 Logic Puzzles: CAT 2017 Set-1 | Question: 63 top

Four cars need to travel from Akala $(A)$ to Bakala $(B)$. Two routes are available, one via Mamur $(M)$ and the other via Nanur $(N)$. The roads from $A$ to $M$, and from $N$ to $B$, are both short and narrow. In each case, one car takes $6$ minutes to cover the distance, and each additional car increases the travel time per car by $3$ minutes because of congestion. (For example, if only two cars drive from $A$ to $M$, each car takes $9$ minutes.) On the road from $A$ to $N$, one car takes $20$ minutes, and each additional car increases the travel time per car by $1$ minute. On the road from $M$ to $B$, one car takes $20$ minutes, and each additional car increases the travel time per car by $0.9$ minute.

The police department orders each car to take a particular route in such a manner that it is not possible for any car to reduce its travel time by not following the order, while the other cars are following the order.

How many cars would be asked to take the route $A$-$N$-$B$, that is Akala-Nanur-Bakala route, by the police department?

A. $3$ B. $2$ C. $1$ D. $0$

cat2017-1 logical-reasoning logic-puzzles

## 2.18.276 Logic Puzzles: CAT 2017 Set-1 | Question: 64 top

Four cars need to travel from Akala $(A)$ to Bakala $(B)$. Two routes are available, one via Mamur $(M)$ and the other via Nanur $(N)$. The roads from $A$ to $M$, and from $N$ to $B$, are both short and narrow. In each case, one car takes $6$ minutes to cover the distance, and each additional car increases the travel time per car by $3$ minutes because of congestion. (For example, if only two cars drive from $A$ to $M$, each car takes $9$ minutes.) On the road from $A$ to $N$, one car takes $20$ minutes, and each additional car increases the travel time per car by $1$ minute. On the road from $M$ to $B$, one car takes $20$ minutes, and each additional car increases the travel time per car by $0.9$ minute.

The police department orders each car to take a particular route in such a manner that it is not possible for any car to reduce its travel time by not following the order, while the other cars are following the order.

If all the cars follow the police order, what is the difference in travel time (in minutes) between a car which takes the route $A$-$N$-$B$ and a car that takes the route $A$-$M$-$B$?

A. $1$ B. $0.1$ C. $0.2$ D. $0.9$

cat2017-1 logical-reasoning logic-puzzles

## 2.18.277 Logic Puzzles: CAT 2017 Set-1 | Question: 65 top

Four cars need to travel from Akala $(A)$ to Bakala $(B)$. Two routes are available, one via Mamur $(M)$ and the other via Nanur $(N)$. The roads from $A$ to $M$, and from $N$ to $B$, are both short and narrow. In each case, one car takes $6$ minutes to cover the distance, and each additional car increases the travel time per car by $3$ minutes because of congestion. (For example, if only two cars drive from $A$ to $M$, each car takes $9$ minutes.) On the road from $A$ to $N$, one car takes $20$ minutes, and each additional car increases the travel time per car by $1$ minute. On the road from $M$ to $B$, one car takes $20$ minutes, and each additional car increases the travel time per car by $0.9$ minute.

The police department orders each car to take a particular route in such a manner that it is not possible for any car to reduce its travel time by not following the order, while the other cars are following the order.

A new one-way road is built from $M$ to $N$. Each car now has three possible routes to travel from $A$ to $B$: $A$-$M$-$B$, $A$-$N$-$B$ and $A$-$M$-$N$-$B$. On the road from $M$ to $N$, one car takes $7$ minutes and each additional car increases the travel time per car by $1$ minute. Assume that any car taking the $A$- $M$-$N$-$B$ route travels the $A$-$M$ portion at the same time as other cars taking the $A$-$M$-$B$ route, and the $N$-$B$ portion at the same time as other cars taking the $A$-$N$-$B$ route.

How many cars would the police department order to take the A-M-N-B route so that it is not possible for any car to reduce its travel time by not following the order while the other cars follow the order? (Assume that the police department would never order all the cars to take the same route.)

A. 4 B. 0 C. 1 D. 2

cat2017-1 logical-reasoning logic-puzzles

## 2.18.278 Logic Puzzles: CAT 2017 Set-1 | Question: 66 top

Four cars need to travel from Akala (A) to Bakala (B). Two routes are available, one via Mamur (M) and the other via Nanur (N). The roads from A to M, and from N to B, are both short and narrow. In each case, one car takes 6 minutes to cover the distance, and each additional car increases the travel time per car by 3 minutes because of congestion. (For example, if only two cars drive from A to M, each car takes 9 minutes.) On the road from A to N, one car takes 20 minutes, and each additional car increases the travel time per car by 1 minute. On the road from M to B, one car takes 20 minutes, and each additional car increases the travel time per car by 0.9 minute.

The police department orders each car to take a particular route in such a manner that it is not possible for any car to reduce its travel time by not following the order, while the other cars are following the order.

A new one-way road is built from M to N. Each car now has three possible routes to travel from A to B: A-M-B, A-N-B and A-M-N-B. On the road from M to N, one car takes 7 minutes and each additional car increases the travel time per car by 1 minute. Assume that any car taking the A- M-N-B route travels the A-M portion at the same time as other cars taking the A-M-B route, and the N-B portion at the same time as other cars taking the A-N-B route.

If all the cars follow the police order, what is the minimum travel time (in minutes) from A to B? (Assume that the police department would never order all the cars to take the same route.)

A. 26 B. 32 C. 29.9 D. 3

cat2017-1 logical-reasoning logic-puzzles

## 2.18.279 Logic Puzzles: CAT 2017 Set-2 | Question: 35 top

**Read the information below and answer the question:**

Funky Pizzaria was required to supply pizzas to three different parties. The total number of pizzas it had to deliver was 800, 70% of which were to be delivered to Party 3 and the rest equally divided between Party 1 and Party 2.

Pizzas could be of Thin Crust (T) or Deep Dish (D) variety and come in either Normal Cheese (NC) or Extra Cheese (EC) versions. Hence, there are four types of pizzas: T-NC, T-EC, D-NC and D-EC. Partial information about proportions of T and NC pizzas ordered by the three parties is given below:

| | Thin Crust (T) | Normal Cheese (NC) |
|---|---|---|
| Party 1 | 0.6 | – |
| Party 2 | 0.55 | 0.3 |
| Party 3 | – | 0.65 |
| Total | 0.375 | 0.52 |

How many Thin Crust pizzas were to be delivered to Party 3?

A. 398 B. 162 C. 196 D. 364

cat2017-2 logical-reasoning logic-puzzles

## 2.18.280 Logic Puzzles: CAT 2017 Set-2 | Question: 36 top

**Read the information below and answer the question:**

Funky Pizzaria was required to supply pizzas to three different parties. The total number of pizzas it had to deliver was 800, 70% of which were to be delivered to Party 3 and the rest equally divided between Party 1 and Party 2.

Pizzas could be of Thin Crust (T) or Deep Dish (D) variety and come in either Normal Cheese (NC) or Extra Cheese (EC) versions. Hence, there are four types of pizzas: T-NC, T-EC, D-NC and D-EC. Partial information about proportions of T and NC pizzas ordered by the three parties is given below:

| | Thin Crust (T) | Normal Cheese (NC) |
|---|---|---|
| Party 1 | 0.6 | – |
| Party 2 | 0.55 | 0.3 |
| Party 3 | – | 0.65 |
| Total | 0.375 | 0.52 |

How many Normal Cheese pizzas were required to be delivered to Party 1?

A. 104 B. 84 C. 16 D. 196

cat2017-2 logical-reasoning logic-puzzles

## 2.18.281 Logic Puzzles: CAT 2017 Set-2 | Question: 37 top

**Read the information below and answer the question:**

Funky Pizzaria was required to supply pizzas to three different parties. The total number of pizzas it had to deliver was 800, 70% of which were to be delivered to Party 3 and the rest equally divided between Party 1 and Party 2.

Pizzas could be of Thin Crust (T) or Deep Dish (D) variety and come in either Normal Cheese (NC) or Extra Cheese (EC) versions. Hence, there are four types of pizzas: T-NC, T-EC, D-NC and D-EC. Partial information about proportions of T and NC pizzas ordered by the three parties is given below:

| | Thin Crust (T) | Normal Cheese (NC) |
|---|---|---|
| Party 1 | 0.6 | – |
| Party 2 | 0.55 | 0.3 |
| Party 3 | – | 0.65 |
| Total | 0.375 | 0.52 |

For Party 2, if 50% of the Normal Cheese pizzas were of Thin Crust variety, what was the difference between the numbers of T-EC and D-EC pizzas to be delivered to Party 2?

A. 18 B. 12 C. 30 D. 24

cat2017-2 logical-reasoning logic-puzzles

## 2.18.282 Logic Puzzles: CAT 2017 Set-2 | Question: 38 top

**Read the information below and answer the question:**

Funky Pizzaria was required to supply pizzas to three different parties. The total number of pizzas it had to deliver was 800, 70% of which were to be delivered to Party 3 and the rest equally divided between Party 1 and Party 2.

Pizzas could be of Thin Crust (T) or Deep Dish (D) variety and come in either Normal Cheese (NC) or Extra Cheese (EC) versions. Hence, there are four types of pizzas: T-NC, T-EC, D-NC and D-EC. Partial information about proportions of T and NC pizzas ordered by the three parties is given below:

| | Thin Crust (T) | Normal Cheese (NC) |
|---|---|---|
| Party 1 | 0.6 | – |
| Party 2 | 0.55 | 0.3 |
| Party 3 | – | 0.65 |
| Total | 0.375 | 0.52 |

Suppose that a T-NC pizza cost as much as a D-NC pizza, but 3/5th of the price of a D-EC pizza. A D-EC pizza costs Rs. 50 more than a T-EC pizza, and the latter costs Rs. 500.

If 25% of the Normal Cheese pizzas delivered to Party 1 were of Deep Dish variety, what was the total bill for Party 1?

A. Rs. 59480 B. Rs. 59840 C. Rs. 42520 D. Rs. 45240

cat2017-2 logical-reasoning logic-puzzles

## 2.18.283 Logic Puzzles: CAT 2017 Set-2 | Question: 39 top

There were seven elective courses E1 to E7 running in a specific term in a college. Each of the 300 students enrolled had chosen just one elective from among these seven. However, before the start of the term, E7 was withdrawn as the instructor concerned had left the college. The students who had opted for E7 were allowed to join any of the remaining electives. Also, the students who had chosen other electives were given one chance to change their choice. The table below captures the movement of the students from one elective to another during this process. Movement from one elective to the same elective simply means no movement. Some numbers in the table got accidentally erased; however, it is known that these were either 0 or 1.

| | To Elective | | | | | | |
|---|---|---|---|---|---|---|---|
| | | E1 | E2 | E3 | E4 | E5 | E6 |
| E1 | 9 | 5 | 10 | 1 | 4 | 2 | |
| E2 | | 34 | 8 | | 2 | 2 | |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Form Elective | E3 | 2 | 6 | 25 | | | 2 |
| | E4 | | 3 | 2 | 14 | | 4 |
| | E5 | | 5 | | | 30 | |
| | E6 | | 7 | 3 | | 2 | 9 |
| | E7 | 4 | 16 | 30 | 5 | 5 | 41 |

Further, the following are known:

1. Before the change process there were $6$ more students in $E1$ than in $E4$, but after the reshuffle, the number of students in $E4$ was $3$ more than that in $E1$.
2. The number of students in $E2$ increased by $30$ after the change process.
3. Before the change process, $E4$ had $2$ more students than $E6$, while $E2$ had $10$ more students than $E3$.

How many elective courses among $E1$ to $E6$ had a decrease in their enrollments after the change process?

A. $4$ B. $1$ C. $2$ D. $3$

cat2017-2 logical-reasoning logic-puzzles

## 2.18.284 Logic Puzzles: CAT 2017 Set-2 | Question: 40 top

There were seven elective courses $E1$ to $E7$ running in a specific term in a college. Each of the $300$ students enrolled had chosen just one elective from among these seven. However, before the start of the term, $E7$ was withdrawn as the instructor concerned had left the college. The students who had opted for $E7$ were allowed to join any of the remaining electives. Also, the students who had chosen other electives were given one chance to change their choice. The table below captures the movement of the students from one elective to another during this process. Movement from one elective to the same elective simply means no movement. Some numbers in the table got accidentally erased; however, it is known that these were either $0$ or $1$.

| | | To Elective | | | | | |
|---|---|---|---|---|---|---|---|
| | | E1 | E2 | E3 | E4 | E5 | E6 |
| Form Elective | E1 | 9 | 5 | 10 | 1 | 4 | 2 |
| | E2 | | 34 | 8 | | 2 | 2 |
| | E3 | 2 | 6 | 25 | | | 2 |
| | E4 | | 3 | 2 | 14 | | 4 |
| | E5 | | 5 | | | 30 | |
| | E6 | | 7 | 3 | | 2 | 9 |
| | E7 | 4 | 16 | 30 | 5 | 5 | 41 |

Further, the following are known:

1. Before the change process there were $6$ more students in $E1$ than in $E4$, but after the reshuffle, the number of students in $E4$ was $3$ more than that in $E1$.
2. The number of students in $E2$ increased by $30$ after the change process.
3. Before the change process, $E4$ had $2$ more students than $E6$, while $E2$ had $10$ more students than $E3$.

After the change process, which of the following is the correct sequence of number of students in the six electives $E1$ to $E6$?

A. $19, 76, 79, 21, 45, 60$
B. $19, 76, 78, 22, 45, 60$
C. $18, 76, 79, 23, 43, 61$
D. $18, 76, 79, 21, 45, 61$

## 2.18.285 Logic Puzzles: CAT 2017 Set-2 | Question: 41 top

There were seven elective courses $E1$ to $E7$ running in a specific term in a college. Each of the $300$ students enrolled had chosen just one elective from among these seven. However, before the start of the term, $E7$ was withdrawn as the instructor concerned had left the college. The students who had opted for $E7$ were allowed to join any of the remaining electives. Also, the students who had chosen other electives were given one chance to change their choice. The table below captures the movement of the students from one elective to another during this process. Movement from one elective to the same elective simply means no movement. Some numbers in the table got accidentally erased; however, it is known that these were either $0$ or $1$.

| | | To Elective | | | | | |
|---|---|---|---|---|---|---|---|
| | | E1 | E2 | E3 | E4 | E5 | E6 |
| | E1 | 9 | 5 | 10 | 1 | 4 | 2 |
| | E2 | | 34 | 8 | | 2 | 2 |
| | E3 | 2 | 6 | 25 | | | 2 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Form Elective | E4 | | 3 | 2 | 14 | | 4 |
| | E5 | | 5 | | | 30 | |
| | E6 | | 7 | 3 | | 2 | 9 |
| | E7 | 4 | 16 | 30 | 5 | 5 | 41 |

Further, the following are known:

1. Before the change process there were 6 more students in E1 than in E4, but after the reshuffle, the number of students in E4 was 3 more than that in E1.
2. The number of students in E2 increased by 30 after the change process.
3. Before the change process, E4 had 2 more students than E6, while E2 had 10 more students than E3.

After the change process, which course among E1 to E6 had the largest change in its enrollment percentage of its original enrollment?

A. E1 B. E2 C. E3 D. E6

cat2017-2 logical-reasoning logic-puzzles

## 2.18.286 Logic Puzzles: CAT 2017 Set-2 | Question: 42 top

There were seven elective courses E1 to E7 running in a specific term in a college. Each of the 300 students enrolled had chosen just one elective from among these seven. However, before the start of the term, E7 was withdrawn as the instructor concerned had left the college. The students who had opted for E7 were allowed to join any of the remaining electives. Also, the students who had chosen other electives were given one chance to change their choice. The table below captures the movement of the students from one elective to another during this process. Movement from one elective to the same elective simply means no movement. Some numbers in the table got accidentally erased; however, it is known that these were either 0 or 1.

| | | To Elective | | | | | |
|---|---|---|---|---|---|---|---|
| | | E1 | E2 | E3 | E4 | E5 | E6 |
| Form Elective | E1 | 9 | 5 | 10 | 1 | 4 | 2 |
| | E2 | | 34 | 8 | | 2 | 2 |
| | E3 | 2 | 6 | 25 | | | 2 |
| | E4 | | 3 | 2 | 14 | | 4 |
| | E5 | | 5 | | | 30 | |
| | E6 | | 7 | 3 | | 2 | 9 |
| | E7 | 4 | 16 | 30 | 5 | 5 | 41 |

Further, the following are known:

1. Before the change process there were 6 more students in E1 than in E4, but after the reshuffle, the number of students in E4 was 3 more than that in E1.
2. The number of students in E2 increased by 30 after the change process.
3. Before the change process, E4 had 2 more students than E6, while E2 had 10 more students than E3.

Later, the college imposed a condition that if after the change of electives, the enrollment in any elective (other than E7) dropped to less than 20 students, all the students who had left that course will be required to re-enroll for that elective.

Which of the following is a correct sequence of electives in decreasing order of their final enrollments?

A. E2, E3, E6, E5, E1, E4
B. E3, E2, E6, E5, E4, E1
C. E2, E5, E3, E1, E4, E6
D. E2, E3, E5, E6, E1, E3

## 2.18.287 Logic Puzzles: CAT 2017 Set-2 | Question: 43 top

An old woman had the following assets:

a. Rs. 70 lakh in bank deposits
b. A house worth Rs. 50 lakh
c. 3 flats, each worth Rs. 30 lakh
d. A certain number of gold coins, each worth Rs. 1 lakh

She wanted to distribute her assets among her three children; Neeta, Seeta and Geeta. The house, any of the flats or any of the coins were not to be split. That is, the house went entirely to one child; a flat went to one child and similarly, a gold coin went to one child.

Among the three, Neeta received the least amount in bank deposits, while Geeta received the highest. The value of the assets was distributed equally among the children, as were the gold coins.

How much did Seeta receive in bank deposits (in lakhs of rupees)?

A. 30 B. 40 C. 20 D. 10

cat2017-2 logical-reasoning logic-puzzles

## 2.18.288 Logic Puzzles: CAT 2017 Set-2 | Question: 44 top

An old woman had the following assets:

a. Rs. 70 lakh in bank deposits b. 1 house worth Rs. 50 lakh c. 3 flats, each worth Rs. 30 lakh d. A certain number of gold coins, each worth Rs. 1 lakh

She wanted to distribute her assets among her three children; Neeta, Seeta and Geeta. The house, any of the flats or any of the coins were not to be split. That is, the house went entirely to one child; a flat went to one child and similarly, a gold coin went to one child.

Among the three, Neeta received the least amount in bank deposits, while Geeta received the highest. The value of the assets was distributed equally among the children, as were the gold coins.

How many flats did Neeta receive?

A. 1 B. 2 C. 3 D. 4

## 2.18.291 Logic Puzzles: CAT 2017 Set-2 | Question: 51 top

A tea taster was assigned to rate teas from six different locations - Munnar, Wayanad, Ooty, Darjeeling. Assam and Himachal. These teas were placed in six cups, numbered 1 to 6, not necessarily in the same order. The tea taster was asked to rate these teas on the strength of their flavour on a scale of 1 to 10. He gave a unique integer rating to each tea. Some other information is given below:

1. Cup 6 contained tea from Himachal.
2. Tea from Ooty got the highest rating, but it was not in Cup 3.
3. The rating of tea in Cup 3 was double the rating of the tea in Cup 5.
4. Only two cups got ratings in even numbers.
5. Cup 2 got the minimum rating and this rating was an even number.

6. Tea in Cup 3 got a higher rating than that in Cup 1.
7. The rating of tea from Wayanad was more than the rating of tea from Munnar, but less than that from Assam.

What was the second highest rating given?

A. 7 B. 6 C. 3 D. 1

cat2017-2 logical-reasoning logic-puzzles

## 2.18.292 Logic Puzzles: CAT 2017 Set-2 | Question: 52 top

These teas were placed in six cups, numbered 1 to 6, not necessarily in the same order. The tea taster was asked to rate these teas on the strength of their flavour on a scale of 1 to 10. He gave a unique integer rating to each tea. Some other information is given below:

1. Cup 6 contained tea from Himachal.
2. Tea from Ooty got the highest rating, but it was not in Cup 3.
3. The rating of tea in Cup3 was double the rating of the tea in Cup 5.
4. Only two cups got ratings in even numbers.
5. Cup 2 got the minimum rating and this rating was an even number.
6. Tea in Cup 3 got a higher rating than that in Cup 1.
7. The rating of tea from Wayanad was more than the rating of tea from Munnar, but less than that from Assam.

If the tea from Munnar did not get the minimum rating, what was the rating of the tea from Wayanad?

A. 3 B. 5 C. 1 D. 6

cat2017-2 logical-reasoning logic-puzzles

## 2.18.294 Logic Puzzles: CAT 2017 Set-2 | Question: 54 top

A tea taster was assigned to rate teas from six different locations - Munnar, Wayanad, Ooty, Darjeeling. Assam and Himachal. These teas were placed in six cups, numbered 1 to 6, not necessarily in the same order. The tea taster was asked to rate these teas on the strength of their flavour on a scale of 1 to 10. He gave a unique integer rating to each tea. Some other information is given below:

1. Cup 6 contained tea from Himachal.
2. Tea from Ooty got the highest rating, but it was not in Cup 3.
3. The rating of tea in Cup3 was double the rating of the tea in Cup 5.
4. Only two cups got ratings in even numbers.
5. Cup 2 got the minimum rating and this rating was an even number.
6. Tea in Cup 3 got a higher rating than that in Cup 1.
7. The rating of tea from Wayanad was more than the rating of tea from Munnar, but less than that from Assam.

If cups containing teas from Wayanad and Ooty had consecutive numbers, which of the following statements may be true?

A. Cup 5 contains tea from Assam
B. Cup 1 contains tea from Darjeeling
C. Tea from Wayanad has got a rating of 6
D. Tea from Darjeeling got the minimum rating

## 2.18.295 Logic Puzzles: CAT 2017 Set-2 | Question: 55 top

In an $8 \times 8$ chessboard a queen placed anywhere can attack another piece if the piece is present in the same row, or in the same column or in any diagonal position in any possible 4 directions, provided there is no other piece in between in the path from the queen to that piece. The columns are labelled $a$ to $h$ (left to right) and the rows are numbered $1$ to $8$ (bottom to top). The position of a piece is given by the combination of column and row labels. For example, position $c5$ means that the piece is in $c$th column and $5$th row.

If the queen is at $c5$, and the other pieces at positions $c2$, $g1$, $g3$, $g5$ and $a3$, how many are under attack by the queen? There are no other pieces on the board.

A. $2$ B. $3$ C. $4$ D. $5$

cat2017-2 logical-reasoning logic-puzzles

## 2.18.296 Logic Puzzles: CAT 2017 Set-2 | Question: 56 top

In an $8 \times 8$ chessboard a queen placed anywhere can attack another piece if the piece is present in the same row, or in the same column or in any diagonal position in any possible 4 directions, provided there is no other piece in between in the path from the queen to that piece. The columns are labelled $a$ to $h$ (left to right) and the rows are numbered $1$ to $8$ (bottom to top). The position of a piece is given by the combination of column and row labels. For example, position $c5$ means that the piece is in $c$th column and $5$th row.

Suppose the queen is the only piece on the board and it is at position $d5$.

If the other pieces are only at positions $a1$, $a3$, $b4$, $d7$, $h7$ and $h8$, then which of the following positions of the queen results in the maximum number of pieces being under attack?

A. $f8$ B. $a7$ C. $c1$ D. $d3$

cat2017-2 logical-reasoning logic-puzzles

## 2.18.297 Logic Puzzles: CAT 2017 Set-2 | Question: 57 top

In an $8 \times 8$ chessboard a queen placed anywhere can attack another piece if the piece is present in the same row, or in the same column or in any diagonal position in any possible 4 directions, provided there is no other piece in between in the path from the queen to that piece. The columns are labelled $a$ to $h$ (left to right) and the rows are numbered $1$ to $8$ (bottom to top). The position of a piece is given by the combination of column and row labels. For example, position $c5$ means that the piece is in $c$th column and $5$th row.

If the other pieces are only at positions $a1$, $a3$, $b4$, $d7$, $h7$ and $h8$, then from how many positions the queen cannot attack any of the pieces?

A. $0$ B. $3$ C. $4$ D. $6$

cat2017-2 logical-reasoning logic-puzzles

## 2.18.298 Logic Puzzles: CAT 2017 Set-2 | Question: 58 top

In an $8 \times 8$ chessboard a queen placed anywhere can attack another piece if the piece is present in the same row, or in the same column or in any diagonal position in any possible 4 directions, provided there is no other piece in between in the path from the queen to that piece. The columns are labelled $a$ to $h$ (left to right) and the rows are numbered $1$ to $8$ (bottom to top). The position of a piece is given by the combination of column and row labels. For example, position $c5$ means that the piece is in $c$ th column and $5$th row.

Suppose the queen is the only piece on the board and it is at position $d5$.

In how many positions can another piece be placed on the board such that it is safe from attack from the queen?

A. $32$ B. $35$ C. $36$ D. $37$

cat2017-2 logical-reasoning logic-puzzles

## 2.18.299 Logic Puzzles: CAT 2017 Set-2 | Question: 59 top

Eight friends: Ajit, Byomkesh, Gargi, Jayanta, Kikira, Manik, Prodosh and Tapesh are going to Delhi from Kolkata by a flight operated by Cheap Air. In the flight, sitting is arranged in $30$ rows, numbered $1$ to $30$, each consisting of $6$ seats, marked by

letters A to F from left to right, respectively. Seats A to C are to the left of the aisle (the passage running from the front of the aircraft to the back), and seats D to F are to the right of the aisle. Seats A and F are by the windows and referred to as Window seats, C and D are by the aisle and are referred to as Aisle seats while B and E are referred to as Middle seats. Seats marked by consecutive letters are called consecutive seats (or seats next to each other). A seat number is a combination of the row number, followed by the letter indicating the position in the row e.g, 1A is the left window seat in the first row, while 12E is the right middle seat in the 12th row.

Cheap Air charges Rs. 1000 extra for any seats in Rows 1, 12 and 13 as those have extra legroom. For Rows 2-10, it charges Rs. 300 extra for Window seats and Rs. 500 extra for Aisle seats. For Rows 11 and 14 to 20, it charges Rs. 200 extra for Window seats and Rs. 400 extra for Aisle seats. All other seats are available at no extra charge.

The following are known:

1. The eight friends were seated in six different rows.
2. They occupied 3 Window seats, 4 Aisle seats and 1 Middle seat.
3. Seven of them had to pay extra amounts, totaling to Rs. 4600, for their choices of seat. One of them did not pay any additional amount for his/her choice of seat.
4. Jayanta, Ajit and Byomkesh were sitting in seats marked by the same letter, in consecutive rows in increasing order of row numbers; but all of them paid different amounts for their choices of seat. One of these amounts may be zero.
5. Gargi was sitting next to Kikira, and Manik was sitting next to Jayanta.
6. Prodosh and Tapesh were sitting in seats marked by the same letter, in consecutive rows in increasing order of row numbers; but they paid different amounts for their choices of seat. One of these amounts may be zero.

In which row was Manik sitting?

A. 10 B. 11 C. 12 D. 13

cat2017-2 logical-reasoning logic-puzzles

## 2.18.300 Logic Puzzles: CAT 2017 Set-2 | Question: 60 top

Eight friends: Ajit, Byomkesh, Gargi, Jayanta, Kikira, Manik, Prodosh and Tapesh are going to Delhi from Kolkata by a flight operated by Cheap Air. In the flight, sitting is arranged in 30 rows, numbered 1 to 30, each consisting of 6 seats, marked by letters A to F from left to right, respectively. Seats A to C are to the left of the aisle (the passage running from the front of the aircraft to the back), and seats D to F are to the right of the aisle. Seats A and F are by the windows and referred to as Window seats, C and D are by the aisle and are referred to as Aisle seats while B and E are referred to as Middle seats. Seats marked by consecutive letters are called consecutive seats (or seats next to each other). A seat number is a combination of the row number, followed by the letter indicating the position in the row e.g, 1A is the left window seat in the first row, while 12E is the right middle seat in the 12th row.

Cheap Air charges Rs. 1000 extra for any seats in Rows 1, 12 and 13 as those have extra legroom. For Rows 2-10, it charges Rs. 300 extra for Window seats and Rs. 500 extra for Aisle seats. Who among the following did not pay any extra amount for his/her choice of seat?

A. Kikira B. Manik C. Gargi D. Tapesh

cat2017-2 logical-reasoning logic-puzzles

## 2.18.303 Logic Puzzles: CAT 2017 Set-2 | Question: 63 top

A high security research lab requires the researchers to set a pass key sequence based on the scan of the five fingers of their left hands. When an employee first joins the lab, her fingers are scanned in an order of her choice, and then when she wants to re-enter the facility, she has to scan the five fingers in the same sequence.

The lab authorities are considering some relaxations of the scan order requirements, since it is observed that some employees often get locked-out because they forget the sequence.

The lab has decided to allow a variation in the sequence of scans of the five fingers so that at most two scans (out of five) are out of place. For example, if the original sequence is Thumb (T), index finger (I), middle finger (M), ring finger (R) and

little finger (L) then TLMRI is also allowed, but TMRLI is not.

How many different sequences of scans are allowed for any given person's original scan?

A. 10 B. 11 C. 13 D. 14

cat2017-2 logical-reasoning logic-puzzles

## 2.18.304 Logic Puzzles: CAT 2017 Set-2 | Question: 64 top

A high security research lab requires the researchers to set a pass key sequence based on the scan of the five fingers of their left hands. cat2017-2 logical-reasoning logic-puzzles

## 2.18.305 Logic Puzzles: CAT 2017 Set-2 | Question: 65 top

A high security research lab requires the researchers to set a pass key sequence based on the scan of the five fingers of their left hands. When an employee first joins the lab, her fingers are scanned in an order of her choice, and then when she wants to re-enter the facility, she has to scan the five fingers in the same sequence.

The lab authorities are considering some relaxations of the scan order requirements, since it is observed that some employees often get locked-out because they forget the sequence.

The lab has now decided to require six scans in the pass key sequence, where exactly one finger is scanned twice, and the other fingers are scanned exactly once, which can be done in any order. For example, a possible sequence is TIMTRL.

Suppose the lab allows a variation of the original sequence (of six inputs) where at most two scans (out of six) are out of place, as long as the finger originally scanned twice is scanned twice and other fingers are scanned once.

How many different sequences of scans are allowed for any given person's original scan?

A. 15 B. 13 C. 14 D. 12

cat2017-2 logical-reasoning logic-puzzles

## 2.18.306 Logic Puzzles: CAT 2017 Set-2 | Question: 66 top

A high security research lab requires the researchers to set a pass key sequence based on the scan of the five fingers of their left hands. When an employee first joins the lab, her fingers are scanned in an order of her choice, and then when she wants to re-enter the facility, she has to scan the five fingers in the same sequence.

The lab authorities are considering some relaxations of the scan order requirements, since it is observed that some employees often get locked-out because they forget the sequence.

The lab has now decided to require six scans in the pass key sequence, where exactly one finger is Scanned twice, and the other fingers are scanned exactly once, which can be done in any order. For example, a possible sequence is TIMTRL.

Suppose the lab allows a variation of the original sequence (of six inputs) so that input in the form of scanned sequence of six fingers is allowed to vary from the original sequence by one place for any of the fingers, as long as the finger originally scanned twice is scanned twice and other fingers are scanned once.

How many different sequences of scans are allowed if the original scan sequence is LRLTIM?

A. 8 B. 11 C. 13 D. 14

cat2017-2 logical-reasoning logic-puzzles

## 2.18.307 Logic Puzzles: CAT 2018 Set-1 | Question: 45 top

An ATM dispenses exactly Rs. 5000 per withdrawal using 100, 200 and 500 rupee notes. The ATM requires every customer to give her preference for one of the three denominations of notes. It then dispenses notes such that the number of notes of the customer's preferred denomination exceeds the total number of notes of other denominations dispensed to her.

What is the maximum number of customers that the ATM can serve with a stock of fifty $500$ rupee notes and a sufficient number of notes of other denominations, if all the customers are to be served with at most $20$ notes per withdrawal?

A. 10 B. 16 C. 12 D. 13

cat2018-1 logical-reasoning logic-puzzles

## 2.18.308 Logic Puzzles: CAT 2018 Set-1 | Question: 46 top

An ATM dispenses exactly Rs. $5000$ per withdrawal using $100, 200$ and $500$ rupee notes. The ATM requires every customer to give her preference for one of the three denominations of notes. It then dispenses notes such that the number of notes of the customer's preferred denomination exceeds the total number of notes of other denominations dispensed to her.

What is the number of $500$ rupee notes required to serve $50$ customers with $500$ rupee notes as their preferences and another $50$ customers with $100$ rupee notes as their preferences, if the total number of notes to be dispensed is the smallest possible?

A. 800 B. 750 C. 900 D. 1400

cat2018-1 logical-reasoning logic-puzzles

## 2.18.309 Logic Puzzles: CAT 2018 Set-1 | Question: 47 top

Adriana, Bandita, Chitra, and Daisy are four female students, and Amit, Barun, Chetan, and Deb are four male students. Each of them studies in one of three institutes - X, Y, and Z. Each student majors in one subject among Marketing, Operations, and Finance, and minors in a different one among these three subjects. The following facts are known about the eight students:

1. Three students are from X, three are from Y, and the remaining two students, both female, are from Z.
2. Both the male students from Y minor in Finance, while the female student from Y majors in Operations.
3. Only one male student majors in Operations, while three female students minor in Marketing.
4. One female and two male students major in Finance.
5. Adriana and Deb are from the same institute. Daisy and Amit are from the same institute.
6. Barun is from Y and majors in Operations. Chetan is from X and majors in Finance.
7. Daisy minors in Operations.

Who are the students from the institute Z?

A. Adriana and Bandita.
B. Adriana and Daisy.
C. Bandita and Chitra.
D. Chitra and Daisy.

## 2.18.313 Logic Puzzles: CAT 2018 Set-1 | Question: 53 top

You are given an $n \times n$ square matrix to be filled with numerals so that no two adjacent cells have the same numeral. Two cells are called adjacent if they touch each other horizontally, vertically or diagonally. So a cell in one of the four corners has three cells adjacent to it, and a cell in the first or last row or column which is not in the corner has five cells adjacent to it. Any other cell has eight cells adjacent to it.

Suppose you are allowed to make one mistake, that is, one pair of adjacent cells can have the same numeral. What is the minimum number of different numerals required to fill a $5 \times 5$ matrix?

A. 16 B. 4 C. 25 D. 9

cat2018-1 logical-reasoning logic-puzzles

## 2.18.314 Logic Puzzles: CAT 2018 Set-1 | Question: 54 top

You are given an $n \times n$ square matrix to be filled with numerals so that no two adjacent cells have the same numeral. Two cells are called adjacent if they touch each other horizontally, vertically or diagonally. So a cell in one of the four corners has three cells adjacent to it, and a cell in the first or last row or column which is not in the corner has five cells adjacent to it. Any other cell has eight cells adjacent to it.

Suppose that all the cells adjacent to any particular cell must have different numerals. What is the minimum number of different numerals needed to fill a $5 \times 5$ square matrix?

A. 9 B. 16 C. 4 D. 25

cat2018-1 logical-reasoning logic-puzzles

## 2.18.315 Logic Puzzles: CAT 2018 Set-1 | Question: 55 top

Fuel contamination levels at each of $20$ petrol pumps $\mathrm{P1}, \mathrm{P2}, \ldots, \mathrm{P20}$ were recorded as either high, medium, or low.

1. Contamination levels at three pumps among $\mathrm{P1} - \mathrm{P5}$ were recorded as high.
2. $\mathrm{P6}$ was the only pump among $\mathrm{P1} - \mathrm{P10}$ where the contamination level was recorded as low.

3. $P7$ and $P8$ were the only two consecutively numbered pumps where the same levels of contamination were recorded.
4. High contamination levels were not recorded at any of the pumps $P16 - P20$.
5. The number of pumps where high contamination levels were recorded was twice the number of pumps where low contamination levels were recorded.

Which of the following MUST be true?

A. The contamination level at $P10$ was recorded as high.
B. The contamination level at $P13$ was recorded as low.
C. The contamination level at $P20$ was recorded as medium.
D. The contamination level at $P12$ was recorded as high

cat2018-1 logical-reasoning logic-puzzles

## 2.18.316 Logic Puzzles: CAT 2018 Set-1 | Question: 56 top

Fuel contamination levels at each of $20$ petrol pumps $P1, P2, \ldots, P20$ were recorded as either high, medium, or low.

1. Contamination levels at three pumps among $P1 - P5$ were recorded as high.
2. $P6$ was the only pump among $P1 - P10$ where the contamination level was recorded as low.
3. $P7$ and $P8$ were the only two consecutively numbered pumps where the same levels of contamination were recorded.
4. High contamination levels were not recorded at any of the pumps $P16 - P20$.
5. The number of pumps where high contamination levels were recorded was twice the number of pumps where low contamination levels were recorded.

What best can be said about the number of pumps at which the contamination levels were recorded as medium?

A. Exactly 8. B. More than 4. C. At least 8. D. At most 9.

cat2018-1 logical-reasoning logic-puzzles

## 2.18.317 Logic Puzzles: CAT 2018 Set-1 | Question: 57 top

Fuel contamination levels at each of $20$ petrol pumps $P1, P2, \ldots, P20$ were recorded as either high, medium, or low.

1. Contamination levels at three pumps among $P1 - P5$ were recorded as high.
2. $P6$ was the only pump among $P1 - P10$ where the contamination level was recorded as low.
3. $P7$ and $P8$ were the only two consecutively numbered pumps where the same levels of contamination were recorded.
4. High contamination levels were not recorded at any of the pumps $P16 - P20$.
5. The number of pumps where high contamination levels were recorded was twice the number of pumps where low contamination levels were recorded.

If the contamination level at $P11$ was recorded as low, then which of the following MUST be true?

A. The contamination level at $P12$ was recorded as high.
B. The contamination level at $P14$ was recorded as medium.
C. The contamination level at $P15$ was recorded as medium.
D. The contamination level at $P18$ was recorded as low.

## 2.18.319 Logic Puzzles: CAT 2018 Set-1 | Question: 59 top

A company administers a written test comprising of three sections of 20 marks each – Data Interpretation (DI), Written English (WE) and General Awareness (GA), for recruitment. A composite score for a candidate (out of 80) is calculated by doubling her marks in DI and adding it to the sum of her marks in the other two sections. Candidates who score less than 70% marks in two or more sections are disqualified. From among the rest, the four with the highest composite scores are recruited. If four or less candidates qualify, all who qualify are recruited.

Ten candidates appeared for the written test. Their marks in the test are given in the table below. Some marks in the table are missing, but the following facts are known:

1. No two candidates had the same composite score.
2. Ajay was the unique highest scorer in WE.
3. Among the four recruited, Geeta had the lowest composite score.
4. Indu was recruited.
5. Danish, Harini, and Indu had scored the same marks the in GA.
6. Indu and Jatin both scored 100% in exactly one section and Jatin's composite score was 10 more than Indu's.

| Candidate | marks out of 20 | | |
|---|---|---|---|
| | DI | WE | GA |
| Ajay | 8 | | 16 |
| Bala | | 9 | 11 |
| Chetna | 19 | 4 | 12 |
| Danish | 8 | 15 | |
| Ester | 12 | 18 | 16 |
| Falak | 15 | 7 | 10 |
| Geeta | 14 | | 6 |
| Harini | 5 | | |
| Indu | | 8 | |
| Jatin | | 16 | 14 |

Which of the following statements MUST be true?

1. Jatin's composite score was more than that of Danish.
2. Indu scored less than Chetna in DI.
3. Jatin scored more than Indu in GA.

A. Only 2 B. Only 1 C. Both 1 and 2 D. Both 2 and 3

cat2018-1 logical-reasoning logic-puzzles

## 2.18.320 Logic Puzzles: CAT 2018 Set-1 | Question: 60 top

A company administers a written test comprising of three sections of 20 marks each – Data Interpretation (DI), Written English (WE) and General Awareness (GA), for recruitment. A composite score for a candidate (out of 80) is calculated by doubling her marks in DI and adding it to the sum of her marks in the other two sections. Candidates who score less than 70% marks in two or more sections are disqualified. From among the rest, the four with the highest composite scores are recruited. ## 2.18.321 Logic Puzzles: CAT 2018 Set-2 | Question: 43 top

Seven candidates, Akil, Balaram, Chitra, Divya, Erina, Fatima, and Ganeshan, were invited to interview for a position. Candidates were required to reach the venue before 8 am. Immediately upon arrival, they were sent to one of three interview rooms: 101, 102, and 103. The following venue log shows the arrival times for these candidates. Some of the names have not been recorded in the log and have been marked as '?'.

| Time | 7:10 am | 7:15 am | 7:25 am | 7:30 am | 7:40 am | 7:45 am |
|---|---|---|---|---|---|---|
| Person | Akil,? | ? | ? | Chitra | Fatima | ? |

Additionally here are some statements from the candidates:

Balaram: I was the third person to enter Room 101

Chitra: I was the last person to enter the room I was allotted to.

Erina: I was the only person in the room I was allotted to.

Fatima: Three people including Akil were already in the room that I was allotted to when I entered it.

Ganeshan: I was one among the two candidates allotted to Room 102.

What best can be said about the room to which Divya was allotted

A. Definitely Room 102
B. Definitely Room 103
C. Definitely Room 101
D. Either Room 101 or Room 102

cat2018-2 logical-reasoning logic-puzzles

## 2.18.322 Logic Puzzles: CAT 2018 Set-2 | Question: 44 top

Seven candidates, Akil, Balaram, Chitra, Divya, Erina, Fatima, and Ganeshan, were invited to interview for a position. Candidates were required to reach the venue before 8 am. Immediately upon arrival, they were sent to one of three interview rooms: 101, 102, and 103. The following venue log shows the arrival times for these candidates. Some of the names have not been recorded in the log and have been marked as '?'.

| Time | 7:10 am | 7:15 am | 7:25 am | 7:30 am | 7:40 am | 7:45 am |
|---|---|---|---|---|---|---|
| Person | Akil,? | ? | ? | Chitra | Fatima | ? |

Additionally here are some statements from the candidates:

Balaram: I was the third person to enter Room 101

Chitra: I was the last person to enter the room I was allotted to.

Erina: I was the only person in the room I was allotted to.

Fatima: Three people including Akil were already in the room that I was allotted to when I entered it.

Ganeshan: I was one among the two candidates allotted to Room 102.

Who else was in Room 102 when Ganeshan entered?

A. No one
B. Divya
C. Chitra
D. Akil

## 2.18.323 Logic Puzzles: CAT 2018 Set-2 | Question: 45 top

Seven candidates, Akil, Balaram, Chitra, Divya, Erina, Fatima, and Ganeshan, were invited to interview for a position. Candidates were required to reach the venue before 8 am. Immediately upon arrival, they were sent to one of three interview rooms: 101, 102, and 103. The following venue log shows the arrival times for these candidates. Some of the names have not been recorded in the log and have been marked as '?'.

| Time | 7:10 am | 7:15 am | 7:25 am | 7:30 am | 7:40 am | 7:45 am |
|---|---|---|---|---|---|---|
| Person | Akil,? | ? | ? | Chitra | Fatima | ? |

Additionally here are some statements from the candidates:

Balaram: I was the third person to enter Room 101

Chitra: I was the last person to enter the room I was allotted to.

Erina: I was the only person in the room I was allotted to.

Fatima: Three people including Akil were already in the room that I was allotted to when I entered it.

Ganeshan: I was one among the two candidates allotted to Room 102.

When did Erina reach the venue?

A. 7 : 25 am B. 7 : 45 am C. 7 : 10 am D. 7 : 15 am

cat2018-2 logical-reasoning logic-puzzles

## 2.18.324 Logic Puzzles: CAT 2018 Set-2 | Question: 46 top

Seven candidates, Akil, Balaram, Chitra, Divya, Erina, Fatima, and Ganeshan, were invited to interview for a position. Candidates were required to reach the venue before 8 am. Immediately upon arrival, they were sent to one of three interview rooms: 101, 102, and 103. The following venue log shows the arrival times for these candidates. Some of the names have not been recorded in the log and have been marked as '?'.

| Time | 7:10 am | 7:15 am | 7:25 am | 7:30 am | 7:40 am | 7:45 am |
|---|---|---|---|---|---|---|
| Person | Akil,? | ? | ? | Chitra | Fatima | ? |

Additionally here are some statements from the candidates:

Balaram: I was the third person to enter Room 101

Chitra: I was the last person to enter the room I was allotted to.

Erina: I was the only person in the room I was allotted to.

Fatima: Three people including Akil were already in the room that I was allotted to when I entered it.

Ganeshan: I was one among the two candidates allotted to Room 102.

If Ganeshan entered the venue before Divya, when did Balaram enter the venue?

A. 7 : 45 am B. 7 : 25 am C. 7 : 15 am D. 7 : 10 am

cat2018-2 logical-reasoning logic-puzzles

## 2.18.325 Logic Puzzles: CAT 2018 Set-2 | Question: 48 top

The base exchange rate of a currency X with respect to a currency Y is the number of units of currency Y which is equivalent in value to one unit of currency X. Currency exchange outlets buy currency at buying exchange rates that are lower than base exchange rates, and sell currency at selling exchange rates that are higher than base exchange rates.

A currency exchange outlet uses the local currency L to buy and sell three international currencies A, B, and C, but does not exchange one international currency directly with another.
The base exchange rates of A, B and C with respect to L are in the ratio 100 : 120 : 1. The buying exchange rates of each of A, B, and C with respect to L are 5% below the corresponding base exchange rates, and their selling exchange rates are 10% above their corresponding base exchange rates.

The following facts are known about the outlet on a particular day:

1. The amount of L used by the outlet to buy C equals the amount of L it received by selling C.
2. The amounts of L used by the outlet to buy A and B are in the ratio 5 : 3.
3. The amounts of L the outlet received from the sales of A and B are in the ratio 5 : 9.

4. The outlet received $88000$ units of $\mathrm{L}$ by selling $\mathrm{A}$ during the day.
5. The outlet started the day with some amount of $\mathrm{L}, 2500$ units of $\mathrm{A}, 4800$ units of $\mathrm{B}$, and $48000$ units of $\mathrm{C}$.
6. The outlet ended the day with some amount of $\mathrm{L}, 3300$ units of $\mathrm{A}, 4800$ units of $\mathrm{B}$, and $51000$ units of $\mathrm{C}$.

How many units of currency $\mathrm{C}$ did the outlet sell on that day?

A. 19000 B. 3000 C. 6000 D. 22000

cat2018-2 logical-reasoning logic-puzzles

## 2.18.326 Logic Puzzles: CAT 2018 Set-2 | Question: 50 top

The base exchange rate of a currency $\mathrm{X}$ with respect to a currency $\mathrm{Y}$ is the number of units of currency $\mathrm{Y}$ which is equivalent in value to one unit of currency $\mathrm{X}$. Currency exchange outlets buy currency at buying exchange rates that are lower than base exchange rates, and sell currency at selling exchange rates that are higher than base exchange rates.

A currency exchange outlet uses the local currency $\mathrm{L}$ to buy and sell three international currencies $\mathrm{A}$, $\mathrm{B}$, and $\mathrm{C}$, but does not exchange one international currency directly with another.
The base exchange rates of $\mathrm{A}$, $\mathrm{B}$ and $\mathrm{C}$ with respect to $\mathrm{L}$ are in the ratio $100 : 120 : 1$. The buying exchange rates of each of $\mathrm{A}$, $\mathrm{B}$, and $\mathrm{C}$ with respect to $\mathrm{L}$ are $5\%$ below the corresponding base exchange rates, and their selling exchange rates are $10\%$ above their corresponding base exchange rates.

The following facts are known about the outlet on a particular day:

1. The amount of $\mathrm{L}$ used by the outlet to buy $\mathrm{C}$ equals the amount of $\mathrm{L}$ it received by selling $\mathrm{C}$.
2. The amounts of $\mathrm{L}$ used by the outlet to buy $\mathrm{A}$ and $\mathrm{B}$ are in the ratio $5 : 3$.
3. The amounts of $\mathrm{L}$ the outlet received from the sales of $\mathrm{A}$ and $\mathrm{B}$ are in the ratio $5 : 9$.
4. The outlet received $88000$ units of $\mathrm{L}$ by selling $\mathrm{A}$ during the day.
5. The outlet started the day with some amount of $\mathrm{L}, 2500$ units of $\mathrm{A}, 4800$ units of $\mathrm{B}$, and $48000$ units of $\mathrm{C}$.
6. The outlet ended the day with some amount of $\mathrm{L}, 3300$ units of $\mathrm{A}, 4800$ units of $\mathrm{B}$, and $51000$ units of $\mathrm{C}$.

What was the buying exchange rate of currency $\mathrm{C}$ with respect to currency $\mathrm{L}$ on that day?

A. 0.95 B. 1.10 C. 1.90 D. 2.20

cat2018-2 logical-reasoning logic-puzzles

## 2.18.327 Logic Puzzles: CAT 2018 Set-2 | Question: 52 top

Fun Sports $(\mathrm{FS})$ provides training in three sports-Gilli-danda $(\mathrm{G})$, Kho-Kho $(\mathrm{K})$, and Ludo $(\mathrm{L})$. Currently it has an enrollment of $39$ students each of whom is enrolled in at least one of the three sports. The following details are known:

1. The number of students enrolled only in $\mathrm{L}$ is double the number of students enrolled in all the three sports.
2. There are a total of $17$ students enrolled in $\mathrm{G}$.
3. The number of students enrolled only in $\mathrm{G}$ is one less than the number of students enrolled only in $\mathrm{L}$.
4. The number of students enrolled only in $\mathrm{K}$ is cqual to the number of students who are enrolled in both $\mathrm{K}$ and $\mathrm{L}$
5. The maximum student enrollment is in $\mathrm{L}$.
6. Ten students enrolled in $\mathrm{G}$ are also enrolled in at least one more sport.

If the numbers of students enrolled in $\mathrm{K}$ and $\mathrm{L}$ are in the ratio $19 : 22$, then what is the number of students enrolled in $\mathrm{L}$?

A. 18 B. 19 C. 17 D. 22

cat2018-2 logical-reasoning logic-puzzles

## 2.18.328 Logic Puzzles: CAT 2018 Set-2 | Question: 54 top

Fun Sports $(\mathrm{FS})$ provides training in three sports-Gilli-danda $(\mathrm{G})$, Kho-Kho $(\mathrm{K})$, and Ludo $(\mathrm{L})$. Currently it has an enrollment of $39$ students each of whom is enrolled in at least one of the three sports. The following details are known:

1. The number of students enrolled only in $\mathrm{L}$ is double the number of students enrolled in all the three sports.
2. There are a total of $17$ students enrolled in $\mathrm{G}$.
3. The number of students enrolled only in $\mathrm{G}$ is one less than the number of students enrolled only in $\mathrm{L}$.
4. The number of students enrolled only in $\mathrm{K}$ is cqual to the number of students who are enrolled in both $\mathrm{K}$ and $\mathrm{L}$
5. The maximum student enrollment is in $\mathrm{L}$.
6. Ten students enrolled in $\mathrm{G}$ are also enrolled in at least one more sport.

Due to academic pressure, students who were enrolled in all three sports were asked to withdraw from one of the three sports. After the withdrawal, the number of students enrolled in $\mathrm{G}$ was six less than the number of students enrolled in $\mathrm{L}$, while the

number of students enrolled in $K$ went down by one. After the withdrawal, how many students were enrolled in both $G$ and $L$?

A. 6 B. 7 C. 5 D. 8

cat2018-2 logical-reasoning logic-puzzles

## 2.18.329 Logic Puzzles: CAT 2018 Set-2 | Question: 63 top

Each visitor to an amusement park needs to buy a ticket. Tickets can be Platinum, Gold, or Economy. Visitors are classified as Old, Middle-aged, or Young. The following facts are known about visitors and ticket sales on a particular day:

1. 140 tickets were sold.
2. The number of Middle-aged visitors was twice the number of Old visitors, while the number of Young visitors was twice the number of Middle-aged visitors.
3. Young visitors bought 38 of the 55 Economy tickets that were sold, and they bought half the total number of Platinum tickets that were sold.
4. The number of Gold tickets bought by Old visitors was equal to the number of Economy tickets bought by Old visitors.

If the number of Old visitors buying Platinum tickets was equal to the number of Middle- aged visitors buying Platinum tickets, then which among the following could be the total number of Platinum tickets sold?

A. 34 B. 38 C. 32 D. 36

cat2018-2 logical-reasoning logic-puzzles

## 2.18.330 Logic Puzzles: CAT 2018 Set-2 | Question: 66 top

Each visitor to an amusement park needs to buy a ticket. Tickets can be Platinum, Gold, or Economy. Visitors are classified as Old, Middle-aged, or Young. The following facts are known about visitors and ticket sales on a particular day:

1. 140 tickets were sold.
2. The number of Middle-aged visitors was twice the number of Old visitors, while the number of Young visitors was twice the number of Middle-aged visitors.
3. Young visitors bought 38 of the 55 Economy tickets that were sold, and they bought half the total number of Platinum tickets that were sold.
4. The number of Gold tickets bought by Old visitors was equal to the number of Economy tickets bought by Old visitors.

Which of the following statements MUST be FALSE?

A. The numbers of Old and Middle-aged visitors buying Economy tickets were equal
B. The numbers of Old and Middle-aged visitors buying Platinum tickets were equal
C. The numbers of Middle-aged and Young visitors buying Gold tickets were equal
D. The numbers of Gold and Platinum tickets bought by Young visitors were equal

## 2.18.331 Logic Puzzles: CAT 2019 Set-1 | Question: 47 top

Six players- Tanzi, Umeza, Wangdu, Xyla, Yonita and Zeneca completed in an archery tournament. The tournament had three compulsory rounds, Rounds 1 and 3. In each round every player shot an arrow at a target. Hitting the Centre of the target (called bull's eye) fetched the highest score of 5. The only other possible scores that a player could achieve were $4, 3, 2$ and $1$. Every bull's eye score in the first three rounds gave a player one additional chance to shoot in the bonus rounds, Rounds 4 to 6. The possible scores in Rounds 4 to 6 were identical to the first three.

A player's total score in the tournament was the sum of his/her scores in all rounds played by him/her. The table below presents partial information on points scored by the players after completion of the tournament. In the table, NP means that the player did not participate in that round, while a hyphen means that the player participated in that round and the score information is missing.

| | Round-1 | Round-2 | Round-3 | Round-4 | Round-5 | Round-6 |
|---|---|---|---|---|---|---|
| Tanzi | - | 4 | - | 5 | NP | NP |
| Umeza | - | - | - | 1 | 2 | NP |
| Wangdu | - | 4 | - | NP | NP | NP |
| Xyla | - | - | - | 1 | 5 | - |
| Yonita | - | - | 3 | 5 | NP | NP |

| | | | | | | |
|---|---|---|---|---|---|---|
| Zeneca | - | - | - | 5 | 5 | NP |

The following facts are also known.

1. Tanzi, Umeza and Yonita had the same total score.
2. total scores for all players, except one, were in multiples of three.
3. The highest total score was one more than double of the lowest score.
4. The number of players hitting bull's eye in Round $2$ was double of that in Round $3$.
5. Tanzi and Zeneca had the same score in Round $1$ but different scores in Round $3$.

What was the highest total score?

A. $24$ B. $21$ C. $25$ D. $23$

cat2019-1 logical-reasoning logic-puzzles

## 2.18.332 Logic Puzzles: CAT 2019 Set-1 | Question: 48 top

| Xyla | - | - | - | 1 | 5 | - |
| Yonita | - | - | 3 | 5 | NP | NP |
| Zeneca | - | - | - | 5 | 5 | NP |

The following facts are also known.

1. Tanzi, Umeza and Yonita had the same total score.
2. total scores for all players, except one, were in multiples of three.
3. The highest total score was one more than double of the lowest score.
4. The number of players hitting bull's eye in Round $2$ was double of that in Round $3$.
5. Tanzi and Zeneca had the same score in Round $1$ but different scores in Round $3$.

What was Tanzi's score in Round $3$?

A. $4$ B. $3$ C. $1$ D. $5$

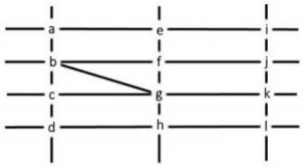
## 2.18.335 Logic Puzzles: CAT 2019 Set-1 | Question: 51 top

Six players- Tanzi, Umeza, Wangdu, Xyla, Yonita and Zeneca competed in an archery tournament. The tournament had three compulsory rounds, Rounds $1$ to $3$. In each round every player shot an arrow at a target. Hitting the centre of the target (called bull's eye) fetched the highest score of $5$. The only other possible scores that a player could achieve were $4, 3, 2$ and $1$. Every bull's eye score in the first three rounds gave a player one additional chance to shoot in the bonus rounds, rounds $4$ to $6$. The

possible scores in Rounds $4$ to $6$ were identical to the first three.

A player's total score in the tournament was the sum of his/her scores in all rounds played by

The figure below shows the street map for a certain region with the street intersections marked from a through I. A person standing at an intersection can see along straight lines to other intersections that are in her line of sight and all other people standing at these intersections. For example, a person standing at intersection $g$ can see all people standing at intersection $b, c, e, f, h$ and $k$. In particular, the person standing at intersection $g$ can see the person standing at intersection e irrespective of whether there is a person standing at intersection $f$.



Six people U, V, W, X, Y and Z, are standing at different intersections. No two people are standing at the same intersection.

The following additional facts are known.

1. X, U and Z are standing at the three corners of a triangle formed by three street segments.
2. X can see only U and Z.
3. Y can see only U and W.
4. U sees V standing in the next intersection behind Z.
5. W cannot see V or Z.
6. No one among the six is standing at intersection $d$.

Who is standing at intersection $a$?

A. No one B. V C. W D. Y

6. No one among the six is standing at intersection $d$.

Should a new person stand at intersection $d$, who among the six would she see?

A. U and Z only B. V and X only C. W and X only D. U and W only

cat2019-1 logical-reasoning logic-puzzles

## 2.18.339 Logic Puzzles: CAT 2019 Set-1 | Question: 61 top

A new game show on TV has 100 boxes numbered $1, 2 \ldots, 100$ in a row, each containing a mystery prize. The prizes are items of different types $a, b, c, \ldots,$ in decreasing order of value. The most expensive item is of type a, a diamond ring, and there is exactly one of these. You are told that the number of items at least doubles as you move to the next type. For example, there would be at least twice as many items of type b as of type a, at least twice as many items of type c as of type b and so on. There is no particular order in which the prizes are placed in the boxes.

Which of the following is not possible?

A. There are exactly 30 items of type b
B. There are exactly 45 items of type c
C. There are exactly 75 items of type e
D. There are exactly 60 items of type d

cat2019-1 logical-reasoning logic-puzzles

## 2.18.340 Logic Puzzles: CAT 2019 Set-1 | Question: 62 top

A new game show on TV has 100 boxes numbered $1, 2 \ldots, 100$ in a row, each containing a mystery prize. The prizes are items of different types $a, b, c, \ldots,$ in decreasing order of value. The most expensive item is of type a, a diamond ring, and there is exactly one of these. You are told that the number of items at least doubles as you move to the next type. For example, there would be at least twice as many items of type b as of type a,at least twice as many items of type c as of type b and so on. There is no particular order in which the prizes are placed in the boxes.

You ask for the type of item in box 45. Instead of being given a direct answer, you are told that there are 31 items of the same type as box 45 in boxes 1 to 44 and 43 items of the same type as box 45 in boxes 46 to 100

What is the maximum possible number of different types of items?

A. 6 B. 3 C. 5 D. 4

cat2019-1 logical-reasoning logic-puzzles

## 2.18.341 Logic Puzzles: CAT 2019 Set-1 | Question: 63 top

A supermarket has to place 12 items (coded A to L) in shelves numbered 1 to 16. Five of these items are types of biscuits, three are types of candies and the rest are types of savouries. Only one item can be kept in a shelf. Items are to be placed such that all items of same type are clustered together with no empty shelf between items of the same type and at least one empty shelf between two different types of items. At most two empty shelves can have consecutive numbers.'

The following additional facts are known.

1. A and B are to be placed in consecutively numbered shelves in increasing order
2. I and J are to be placed in consecutively numbered shelves both higher numbered than the shelves in which A and B are kept.
3. D,E and F are savouries and are to be placed in consecutively numbered shelves in increasing order after all the biscuits and candies.
4. K is to be placed in shelf number 16.
5. L and J are items of the same type, while H is an item of a different type.
6. C is a candy and is to be placed in a shelf preceded by two empty shelves.
7. L is to be placed in a shelf preceded by exactly one empty shelf.

In how many different ways can the items be arranged on the shelves?

A. 2 B. 8 C. 4 D. 1

cat2019-1 logical-reasoning logic-puzzles

## 2.18.342 Logic Puzzles: CAT 2019 Set-1 | Question: 64 top

A supermarket has to place 12 items (coded A to L) in shelves numbered 1 to 16. Five of these items are types of biscuits, three are types of candies and the rest are types of savouries. Only one item can be kept in a shelf. Items are to be placed such

## 2.18.345 Logic Puzzles: CAT 2019 Set-2 | Question: 35 top

Ten players, as listed in the table below, participated in a rifle shooting competition comprising of $10$ rounds. Each round had $6$ participants. Players numbered $1$ through $6$ participated in Round $1$, players $2$ through $7$ in Round $2, \ldots,$ players $5$ through $10$ in Round $5$, players $6$ through $10$ and $1$ in Round $6$, players $7$ through $10$, $1$ and $2$ in Round $7$ and so on. The top three performances in each round were awarded $7, 3$ and $1$ points respectively. There were no ties in any of the $10$ rounds. The table below gives the total number of points obtained by the $10$ players after Round $6$ and Round $10$.

| Player NO. | Player Name | Points after Round 6 | Points after Round 10 |
|---|---|---|---|
| 1 | Amita | 8 | 18 |
| 2 | Bala | 2 | 5 |
| 3 | Chen | 3 | 6 |
| 4 | David | 6 | 6 |
| 5 | Eric | 3 | 10 |
| 6 | Fatima | 10 | 10 |
| 7 | Gordon | 17 | 17 |
| 8 | Hansa | 1 | 4 |
| 9 | Ikea | 2 | 17 |
| 10 | Joshin | 14 | 17 |

The following information is known about Rounds $1$ through $6$:

1. Gordon did not score consecutively in any two rounds.
2. Eric and Fatima both scored in a round.

The following information is known about Rounds $7$ through $10$:
1. Only two players scored in three consecutive rounds. One of them was Chen. No other player scored in any two consecutive rounds.
2. Joshin scored in Round $7$, while Amita scored in Round $10$.
3. No player scored in all the four rounds.

What were the scores of Chen, David, and Eric respectively after Round $3$?

A. $3, 3, 3$ B. $3, 0, 3$ C. $3, 6, 3$ D. $3, 3, 0$

cat2019-2 logical-reasoning logic-puzzles

## 2.18.346 Logic Puzzles: CAT 2019 Set-2 | Question: 36 top

Ten players, as listed in the table below, participated in a rifle shooting competition comprising of $10$ rounds. Each round had $6$ participants. Players numbered $1$ through $6$ participated in Round $1$, players $2$ through $7$ in Round $2, \ldots,$ players $5$ through $10$ in Round $5$, players $6$ through $10$ and $1$ in Round $6$, players $7$ through $10$, $1$ and $2$ in Round $7$ and so on. The top three performances in each round were awarded $7, 3$ and $1$ points respectively. There were no ties in any of the $10$ rounds. The table below gives the total number of points obtained by the $10$ players after Round $6$ and Round $10$.

| Player NO. | Player Name | Points after Round 6 | Points after Round 10 |
|---|---|---|---|
| 1 | Amita | 8 | 18 |
| 2 | Bala | 2 | 5 |

## 2.18.349 Logic Puzzles: CAT 2019 Set-2 | Question: 39 top

In the table below the check marks indicate all languages spoken by five people: Paula, Quentin, Robert, Sally and Terence. For example, Paula speaks only Chinese and English.

| | Arabic | Basque | Chinese | Dutch | English | French |
|---|---|---|---|---|---|---|
| Paula | | | ✓ | | ✓ | |
| Quentin | | | | ✓ | ✓ | |
| Robert | ✓ | | | | | ✓ |
| Sally | | ✓ | | | ✓ | |
| Terence | | | ✓ | | | ✓ |

These five people form three teams, Team 1, Team 2 and Team 3. Each team has either 2 or 3 members. A team is said to speak a particular language if at least one of its members speak that language.
The following facts are known.
1. Each team speaks exactly four languages and has the same number of members.
2. English and Chinese are spoken by all three teams, Basque and French by exactly two teams and the other languages by exactly one team.
3. None of the teams include both Quentin and Robert.
4. Paula and Sally are together in exactly two teams.
5. Robert is in Team 1 and Quentin is in Team 3.

Who among the following four is not a member of Team 2?

A. Quentin
B. Paula
C. Sally
D. Terence

cat2019-2 logical-reasoning logic-puzzles

## 2.18.350 Logic Puzzles: CAT 2019 Set-2 | Question: 40 top

In the table below the check marks indicate all languages spoken by five people: Paula, Quentin, Robert, Sally and Terence. For example, Paula speaks only Chinese and English.

| | Arabic | Basque | Chinese | Dutch | English | French |
|---|---|---|---|---|---|---|
| Paula | | | ✓ | | ✓ | |
| Quentin | | | | ✓ | ✓ | |
| Robert | ✓ | | | | | ✓ |
| Sally | | ✓ | | | ✓ | |
| Terence | | | ✓ | | | ✓ |

These five people form three teams, Team 1, Team 2 and Team 3. Each team has either 2 or 3 members. A team is said to

speak a particular language if at least one of its members speak that language.
The following facts are known.
1. Each team speaks exactly four languages and has the same number of members.
2. English and Chinese are spoken by all three teams, Basque and French by exactly two teams and the other languages by exactly one team.
3. None of the teams include both Quentin and Robert.
4. Paula and Sally are together in exactly two teams.
5. Robert is in Team 1 and Quentin is in Team 3.

Who among the following four people is a part of exactly two teams?

A. Sally B. Robert C. Paula D. Quentin

cat2019-2 logical-reasoning logic-puzzles

## 2.18.351 Logic Puzzles: CAT 2019 Set-2 | Question: 41 top

In the table below the check marks indicate all languages spoken by five people: Paula, Quentin, Robert, Sally and Terence. For example, Paula speaks only Chinese and English.

| | Arabic | Basque | Chinese | Dutch | English | French |
|---|---|---|---|---|---|---|
| Paula | | | ✓ | | ✓ | |

These five people form three teams, Team 1, Team 2 and Team 3. Each team has either 2 or 3 members. A team is said to speak a particular language if at least one of its members speak that language.
The following facts are known.
1. Each team speaks exactly four languages and has the same number of members.
2. English and Chinese are spoken by all three teams, Basque and French by exactly two teams and the other languages by exactly one team.
3. None of the teams include both Quentin and Robert.
4. Paula and Sally are together in exactly two teams.
5. Robert is in Team 1 and Quentin is in Team 3.

Apart from Chinese and English, which languages are spoken by Team 1?

A. Arabic and Basque B. Arabic and French C. Basque and Dutch D. Basque and French

## 2.18.353 Logic Puzzles: CAT 2019 Set-2 | Question: 45 top

Students in a college are discussing two proposals --
A : a proposal by the authorities to introduce dress code on campus, and
B : a proposal by the students to allow multinational food franchises to set up outlets on college campus.
A student does not necessarily support either of the two proposals.
In an upcoming election for student union president, there are two candidates in fray: Sunita and Ragini. Every student prefers one of the two candidates.
A survey was conducted among the students by picking a sample of 500 students.

The following information was noted from this survey.
1. 250 students supported proposal A and 250 students supported proposal B.
2. Among the 200 students who preferred Sunita as student union president, 80% supported proposal A.
3. Among those who preferred Ragini, 30% supported proposal A.
4.20% of those who supported proposal B preferred Sunita.
5. 40% of those who did not support proposal B preferred Ragini.
6. Every student who preferred Sunita and supported proposal B also supported proposal A.
7. Among those who preferred Ragini, 20% did not support any of the proposals.

What percentage of the students surveyed who supported both proposals A and B preferred Sunita as student union president?

A. 50 B. 40 C. 20 D. 25

cat2019-2 logical-reasoning logic-puzzles

## 2.18.354 Logic Puzzles: CAT 2019 Set-2 | Question: 46 top

How many of the students surveyed supported proposal B, did not support proposal A and preferred Ragini as student union president?

A. 200 B. 150 C. 210 D. 40

cat2019-2 logical-reasoning logic-puzzles

## 2.18.355 Logic Puzzles: CAT 2019 Set-2 | Question: 51 top

Three doctors, Dr. Ben, Dr. Kane and Dr. Wayne visit a particular clinic Monday to Saturday to see patients. Dr. Ben sees each patient for 10 minutes and charges Rs. 100/−. Dr. Kane sees each patient for 15 minutes and charges Rs. 200/−, while Dr. Wayne sees each patient for 25 minutes and charges Rs. 300/−.

The clinic has three rooms numbered 1, 2 and 3 which are assigned to the three doctors as per the following table.

| Room No. | Monday & Tuesday | Wednesday & Thursday | Friday & Saturday |
|---|---|---|---|
| 1 | Ben | Wayne | Kane |
| 2 | Kane | Ben | Wayne |
| 3 | Wayne | Kane | Ben |

The clinic is open from 9 a.m. to 11.30 a.m. every Monday to Saturday.

On arrival each patient is handed a numbered token indicating their position in the queue, starting with token number 1 every day. As soon as any doctor becomes free, the next patient in the queue enters that emptied room for consultation. If at any time, more than one room is free then the waiting patient enters the room with the smallest number. For example, if the next two patients in the queue have token numbers 7 and 8 and if rooms numbered 1 and 3 are free, then patient with token number 7

enters room number $1$ and patient with token number $8$ enters room number $3$.

What is the maximum number of patients that the clinic can cater to on any single day?

A. $30$ B. $12$ C. $31$ D. $15$

cat2019-2 logical-reasoning logic-puzzles

## 2.18.356 Logic Puzzles: CAT 2019 Set-2 | Question: 52 top

Three doctors, Dr. Ben, Dr. Kane and Dr. Wayne visit a particular clinic Monday to Saturday to see patients. Dr. Ben sees each patient for $10$ minutes and charges Rs. $100/-$. Dr. Kane sees each patient for $15$ minutes and charges Rs. $200/-$, while Dr. Wayne sees each patient for $25$ minutes and charges Rs. $300/-$.

The clinic has three rooms numbered $1, 2$ and $3$ which are assigned to the three doctors as per the following table.

| Room No. | Monday & Tuesday | Wednesday & Thursday | Friday & Saturday |
|---|---|---|---|
| 1 | Ben | Wayne | Kane |
| 2 | Kane | Ben | Wayne |
| 3 | Wayne | Kane | Ben |

The clinic is open from $9$ a.m. to $11.30$ a.m. every Monday to Saturday.

On arrival each patient is handed a numbered token indicating their position in the queue, starting with token number $1$ every day. As soon as any doctor becomes free, the next patient in the queue enters that emptied room for consultation. If at any time, more than one room is free then the waiting patient enters the room with the smallest number. For example, if the next two patients in the queue have token numbers $7$ and $8$ and if rooms numbered $1$ and $3$ are free, then patient with token number $7$ enters room number $1$ and patient with token number $8$ enters room number $3$.

The queue is never empty on one particular Saturday. Which of the three doctors would earn the maximum amount in consultation charges on that day?

A. Dr. Wayne
B. Dr. Kane
C. Both Dr. Wayne and Dr. Kane
D. Dr. Ben

cat2019-2 logical-reasoning logic-puzzles

## 2.18.357 Logic Puzzles: CAT 2019 Set-2 | Question: 53 top

Three doctors, Dr. Ben, Dr. Kane and Dr. Wayne visit a particular clinic Monday to Saturday to see patients. Dr. Ben sees each patient for $10$ minutes and charges Rs. $100/-$. Dr. Kane sees each patient for $15$ minutes and charges Rs. $200/-$, while Dr. Wayne sees each patient for $25$ minutes and charges Rs. $300/-$.

The clinic has three rooms numbered $1, 2$ and $3$ which are assigned to the three doctors as per the following table.

| Room No. | Monday & Tuesday | Wednesday & Thursday | Friday & Saturday |
|---|---|---|---|
| 1 | Ben | Wayne | Kane |
| 2 | Kane | Ben | Wayne |
| 3 | Wayne | Kane | Ben |

The clinic is open from $9$ a.m. to $11.30$ a.m. every Monday to Saturday.

On arrival each patient is handed a numbered token indicating their position in the queue, starting with token number $1$ every day. As soon as any doctor becomes free, the next patient in the queue enters that emptied room for consultation. If at any time, more than one room is free then the waiting patient enters the room with the smallest number. For example, if the next two patients in the queue have token numbers $7$ and $8$ and if rooms numbered $1$ and $3$ are free, then patient with token number $7$ enters room number $1$ and patient with token number $8$ enters room number $3$,

Mr. Singh visited the clinic on Monday, Wednesday, and Friday of a particular week, arriving at $8:50$ a.m. on each of the three days. His token number was $13$ on all three days. On which day was he at the clinic for the maximum duration?

A. Monday
B. Friday
C. Wednesday
D. Same duration on all three days

cat2019-2 logical-reasoning logic-puzzles

## 2.18.358 Logic Puzzles: CAT 2019 Set-2 | Question: 54 top

Three doctors, Dr. Ben, Dr. Kane and Dr. Wayne visit a particular clinic Monday to Saturday to see patients. Dr. Ben sees each patient for $10$ minutes and charges Rs. $100/-$. Dr. Kane sees each patient for $15$ minutes and charges Rs. $200/-$, while Dr. Wayne sees each patient for $25$ minutes and charges Rs. $300/-$.

The clinic has three rooms numbered $1, 2$ and $3$ which are assigned to the three doctors as per the following table.

| Room No. | Monday & Tuesday | Wednesday & Thursday | Friday & Saturday |
|---|---|---|---|
| 1 | Ben | Wayne | Kane |
| 2 | Kane | Ben | Wayne |
| 3 | Wayne | Kane | Ben |

The clinic is open from $9$ a.m. to $11.30$ a.m. every Monday to Saturday.

On arrival each patient is handed a numbered token indicating their position in the queue, starting with token number $1$ every day. As soon as any doctor becomes free, the next patient in the queue enters that emptied room for consultation. If at any time, more than one room is free then the waiting patient enters the room with the smallest number. For example, if the next two patients in the queue have token numbers $7$ and $8$ and if rooms numbered $1$ and $3$ are free, then patient with token number $7$ enters room number $1$ and patient with token number $8$ enters room number $3$

On a slow Thursday, only two patients are waiting at $9$ a.m. After that two patients keep arriving at exact $15$ minute intervals starting at $9:15$ a.m. -- i.e. at $9:15$ a.m., $9:30$ a.m., $9:45$ a.m. etc. Then the total duration in minutes when all three doctors are simultaneously free is

A. 15 B. 30 C. 10 D. 0

cat2019-2 logical-reasoning logic-puzzles

## 2.18.359 Logic Puzzles: CAT 2020 Set-1 | Question: 27 top

The local office of the APP-CAB company evaluates the performance of five cab drivers, Arun, Barun, Chandan, Damodaran, and Eman for their monthly payment based on ratings in five different parameters ($P1$ and $P5$) as given below:

$P1$: timely arrival

$P2$: behaviour

$P3$: comfortable ride

$P4$: driver's familiarity with the route

$P5$: value for money

Based on feedback from the customers, the office assigns a rating from $1$ to $5$ in each of these parameters. Each rating is an integer from a low value of $1$ to a high value of $5$. The final rating of a driver is the average of his ratings in these five parameters. The monthly payment of the drivers has two parts—a fixed payment and final rating—based bonus. If a driver gets a rating of $1$ in any of the parameters, he is not eligible to get bonus. To be eligible for bonus a driver also needs to get a rating of five in at least one of the parameters.

The partial information related to the ratings of the drivers in different parameters and the monthly payment structure (in rupees) is given in the table below:

| | P1 | P2 | P3 | P4 | P5 | Fixed payment | Bonus |
|---|---|---|---|---|---|---|---|
| Arun | | | | 4 | | Rs.1000 | Rs.250 × Final Rating |
| Barun | 3 | | | | | Rs.1200 | Rs.200 × Final Rating |
| Chandan | | | 2 | | | Rs.1400 | Rs.100 × Final Rating |
| Damodaran | | 3 | | | | Rs.1300 | Rs.150 × Final Rating |
| Eman | | | | | 2 | Rs.1100 | Rs.200 × Final Rating |

The following additional facts are known.

1. Arun and Barun have got a rating of $5$ in exactly one of the parameters. Chandan has got a rating of $5$ in exactly two parameters.
2. None of drivers has got the same rating in three parameters.

If Damodaran does not get a bonus, what is the maximum possible value of his final rating?

A. 3.8 B. 3.4 C. 3.6 D. 3.2

cat2020-set1 logical-reasoning logic-puzzles

## 2.18.360 Logic Puzzles: CAT 2020 Set-1 | Question: 28 top

The local office of the AA-CAB company evaluates the performance of five cab drivers, Arun, Barun, Chandan, Damodaran, and Eman for their monthly payment based on ratings in five different parameters (P1 and P5) as given below:

P1: timely arrival

P2: behaviour

P3: comfortable ride

P4: driver's familiarity with the route

P5: value for money

Based on feedback from the customers, the office assigns a rating from 1 to 5 in each of these parameters. Each rating is an integer from a low value of 1 to a high value of 5. The final rating of a driver is the average of his ratings in these five parameters. The monthly payment of the drivers has two parts—a fixed payment and final rating—based bonus. If a driver gets a rating of 1 in any of the parameters, he is not eligible to get bonus. To be eligible for bonus a driver also needs to get a rating of five in at least one of the parameters.

The partial information related to the ratings of the drivers in different parameters and the monthly payment structure (in rupees) is given in the table below:

| | P1 | P2 | P3 | P4 | P5 | Fixed payment | Bonus |
|---|---|---|---|---|---|---|---|
| Arun | | | | 4 | | Rs.1000 | Rs.250Final Rating × |
| Barun | 3 | | | | | Rs.1200 | Rs.200Final Rating × |
| Chandan | | | 2 | | | Rs.1400 | Rs.100Final Rating × |
| Damodaran | | 3 | | | | Rs.1300 | Rs.150Final Rating × |
| Eman | | | | | 2 | Rs.1100 | Rs.200Final Rating × |

The following additional facts are known.

1. Arun and Barun have got a rating of 5 in exactly one of the parameters. Chandan has got a rating of 5 in exactly two parameters.
2. None of drivers has got the same rating in three parameters.

If Eman gets a bonus, what is the minimum possible value of his final rating?

A. 3.0 B. 3.2 C. 2.8 D. 3.4

cat2020-set1 logical-reasoning logic-puzzles

## 2.18.361 Logic Puzzles: CAT 2020 Set-1 | Question: 29 top

The local office of the AA-CAB company evaluates the performance of five cab drivers, Arun, Barun, Chandan, Damodaran, and Eman for their monthly payment based on ratings in five different parameters (P1 and P5) as given below:

P1: timely arrival

P2: behaviour

P3: comfortable ride

P4: driver's familiarity with the route

P5: value for money

Based on feedback from the customers, the office assigns a rating from 1 to 5 in each of these parameters. Each rating is an integer from a low value of 1 to a high value of 5. The final rating of a driver is the average of his ratings in these five parameters. The monthly payment of the drivers has two parts—a fixed payment and final rating—based bonus. If all five drivers got bonus, what is the maximum possible value of the monthly payment (in rupees) that a driver gets?

A. 1960 B. 1950 C. 1900 D. 2050

cat2020-set1 logical-reasoning logic-puzzles

## 2.18.363 Logic Puzzles: CAT 2020 Set-1 | Question: 31 top

Ten musicians (A, B, C, D, E, F, F, G, H, I, and J) are experts in at least one of the following three percussion

instruments: table, mridangam, and ghatam. Among them, three are experts in tabla but not in mridangam or ghatam, another three are experts in mridangam but not in table or ghatam, and one is an expert in ghatam but not in tabla or mridangam. Further, two are experts in tabla and mridangam but not in ghatam, and one is an expert in tabla and ghatam but not in mridangam.

The following facts are known about these ten musicians.

1. Both A and B are experts in mridangam, but only one of them is also an expert in tabla.
2. D is an expert in both tabla and ghatam
3. Both F and G are experts in tabla, but only one of them is also an expert in mridangam.
4. Neither I nor J is an expert in tabla.
5. Neither H nor I is an expert in mridangam, but only one of them is an expert in ghatam.

Who among the following is DEFINITELY an expert in tabla but not in either mridangam or ghatam?

A. C B. H C. A D. F

cat2020-set1 logical-reasoning logic-puzzles

## 2.18.364 Logic Puzzles: CAT 2020 Set-1 | Question: 32 top

Ten musicians (A, B, C, D, E, F, F, G, H, I, and J) are experts in at least one of the following three percussion instruments: table, mridangam, and ghatam. Among them, three are experts in tabla but not in mridangam or ghatam, another three are experts in mridangam but not in table or ghatam, and one is an expert in ghatam but not in tabla or mridangam. Further, two are experts in tabla and mridangam but not in ghatam, and one is an expert in tabla and ghatam but not in mridangam.

The following facts are known about these ten musicians.

1. Both A and B are experts in mridangam, but only one of them is also an expert in tabla.
2. D is an expert in both tabla and ghatam
3. Both F and G are experts in tabla, but only one of them is also an expert in mridangam.
4. Neither I nor J is an expert in tabla.
5. Neither H nor I is an expert in mridangam, but only one of them is an expert in ghatam.

Who among the following is DEFINITELY an expert in mridangam but not in either tabla or ghatam?

A. B B. G C. J D. E

cat2020-set1 logical-reasoning logic-puzzles

## 2.18.365 Logic Puzzles: CAT 2020 Set-1 | Question: 33 top

Ten musicians (A, B, C, D, E, F, F, G, H, I, and J) are experts in at least one of the following three percussion instruments: table, mridangam, and ghatam. Among them, three are experts in tabla but not in mridangam or ghatam, another three are experts in mridangam but not in table or ghatam, and one is an expert in ghatam but not in tabla or mridangam. Further, two are experts in tabla and mridangam but not in ghatam, and one is an expert in tabla and ghatam but not in mridangam.

The following facts are known about these ten musicians.

1. Both A and B are experts in mridangam, but only one of them is also an expert in tabla.
2. D is an expert in both tabla and ghatam
3. Both F and G are experts in tabla, but only one of them is also an expert in mridangam.
4. Neither I nor J is an expert in tabla.
5. Neither H nor I is an expert in mridangam, but only one of them is an expert in ghatam.

Which of the following pairs CANNOT have any musician who is an expert in both tabla and mridangam but not in ghatam?

A. A and B B. C and F C. C and E D. F and G

cat2020-set1 logical-reasoning logic-puzzles

## 2.18.366 Logic Puzzles: CAT 2020 Set-1 | Question: 34 top

Ten musicians (A, B, C, D, E, F, F, G, H, I, and J) are experts in at least one of the following three percussion instruments: table, mridangam, and ghatam. Among them, three are experts in tabla but not in mridangam or ghatam, another three are experts in mridangam but not in table or ghatam, and one is an expert in ghatam but not in tabla or mridangam. Further, two are experts in tabla and mridangam but not in ghatam, and one is an expert in tabla and ghatam but not in

mridangam.

The following facts are known about these ten musicians.

1. Both A and B are experts in mridangam, but only one of them is also an expert in tabla.
2. D is an expert in both tabla and ghatam
3. Both F and G are experts in tabla, but only one of them is also an expert in mridangam.
4. Neither I nor J is an expert in tabla.
5. Neither H nor I is an expert in mridangam, but only one of them is an expert in ghatam.

If C is an expert in mridangam and F is not, then which are the three musicians who are experts in tabla but not in either mridangam or ghatam?

A. C, E and G B. C, G and H C. E, G and H D. E, F and H

cat2020-set1 logical-reasoning logic-puzzles

## 2.18.367 Logic Puzzles: CAT 2020 Set-1 | Question: 35 top

Four institutes, A, B, C, and D, had contracts with four vendors W, X, Y, and Z during the ten calendar years from 2010 to 2019. The contracts were either multi-year contracts running for several consecutive years or single-year contracts. No institute had more than one contract with the same vendor. However, in a calendar year, an institute may have had contracts with multiple vendors, and a vendor may have had contracts with multiple institutes. It is known that over the decade, the institutes each got into two contracts with two of these vendors, and each vendor got into two contracts with two of these institutes.

The following facts are also known about these contracts.

I. Vendor Z had at least one contract in every year.
II. Vendor X had one or more contracts in every year up to 2015, but no contract in any year after that.
III. Vendor Y had contracts in 2010 and 2019. Vendor W had contracts only in 2012.
IV. There were five contracts in 2012.
V. There were exactly four multi-year contracts. Institute B had a 7-year contract, D had a 4-year contract, and A and C had one 3−year contract each. The other four contracts were single−year contracts.
VI. Institute C had one or more contracts in 2012 but did not have any contract in 2011.
VII. Institutes B and D each had exactly one contract in 2012. Institute D did not have any contract in 2010.

In which of the following years were there two or more contracts?

A. 2018 B. 2017 C. 2015 D. 2016

cat2020-set1 logical-reasoning logic-puzzles

## 2.18.368 Logic Puzzles: CAT 2020 Set-1 | Question: 36 top

Four institutes, A, B, C, and D, had contracts with four vendors W, X, Y, and Z during the ten calendar years from 2010 to 2019. The contracts were either multi-year contracts running for several consecutive years or single-year contracts. No institute had more than one contract with the same vendor. However, in a calendar year, an institute may have had contracts with multiple vendors, and a vendor may have had contracts with multiple institutes. However, in a calendar year, an institute may have had contracts with multiple vendors, and a vendor may have had contracts with multiple institutes. It is known that over the decade, the institutes each got into two contracts with two of these vendors, and each vendor got into two contracts with two of these institutes.

The following facts are also known about these contracts.

I. Vendor Z had at least one contract in every year.
II. Vendor X had one or more contracts in every year up to 2015, but no contract in any year after that.
III. Vendor Y had contracts in 2010 and 2019. Vendor W had contracts only in 2012.
IV. There were five contracts in 2012.
V. There were exactly four multi-year contracts. Institute B had a 7-year contract, D had a 4-year contract, and A and C had one 3−year contract each. The other four contracts were single−year contracts.
VI. Institute C had one or more contracts in 2012 but did not have any contract in 2011.
VII. Institutes B and D each had exactly one contract in 2012. Institute D did not have any contract in 2010.

In how many years during this period was there only one contract?

A. 4 B. 2 C. 3 D. 5

cat2020-set1 logical-reasoning logic-puzzles

## 2.18.370 Logic Puzzles: CAT 2020 Set-1 | Question: 38 top

Four institutes, A, B, C, and D, had contracts with four vendors W, X, Y, and Z during the ten calendar years from 2010 to 2019. The contracts were either multi-year contracts running for several consecutive years or single-year contracts. No institute had more than one contract with the same vendor. However, in a calendar year, an institute may have had contracts with multiple vendors, and a vendor may have had contracts with multiple institutes. It is known that over the decade, the institutes each got into two contracts with two of these vendors, and each vendor got into two contracts with two of these institutes.

The following facts are also known about these contracts.

I. Vendor Z had at least one contract in every year.
II. Vendor X had one or more contracts in every year up to 2015, but no contract in any year after that.
III. Vendor Y had contracts in 2010 and 2019. Vendor W had contracts only in 2012.
IV. There were five contracts in 2012.
V. There were exactly four multi-year contracts. Institute B had a 7-year contract, D had a 4-year contract, and A and C had one 3−year contract each. The other four contracts were single−year contracts.
VI. Institute C had one or more contracts in 2012 but did not have any contract in 2011.
VII. Institutes B and D each had exactly one contract in 2012. Institute D did not have any contract in 2010.

What BEST can be concluded about the number of contracts in 2010?

A. exactly 4 B. at least 4 C. exactly 3 D. at least 3

cat2020-set1 logical-reasoning logic-puzzles

## 2.18.371 Logic Puzzles: CAT 2020 Set-1 | Question: 39 top

## 2.18.373 Logic Puzzles: CAT 2020 Set-1 | Question: 41 top

In a certain board examination, students were to appear for examination in five subjects: English, Hindi, Mathematics, Science, and Social Science. Due to a certain emergency situation, a few of the examinations could not be conducted for some students. Hence, some students missed one examination and others missed two examinations. Nobody missed more than two examinations.

The board adopted the following policy for awarding marks to students. If a student appeared in all five examinations, then the marks awarded in each of the examinations were on the basis of the scores obtained by them in those examinations.

If a student missed only one examination, then the marks awarded in that examination was the average of the best three among the four scores in the examinations they appeared for.

If a student missed two examinations, then the marks awarded in each of these examinations was the average of the best two among the three scores in the examinations they appeared for.

The marks obtained by six students in the examinations are given in the table below. Each of them missed either one or two examinations.

| | English | Hindi | Mathematics | Science | Social Science |
|---|---|---|---|---|---|
| Alva | 80 | 75 | 70 | 75 | 60 |
| Bithi | 90 | 80 | 55 | 85 | 85 |
| Carl | 75 | 80 | 90 | 100 | 90 |
| Deep | 70 | 90 | 100 | 90 | 80 |
| Esha | 80 | 85 | 95 | 60 | 55 |
| Foni | 83 | 72 | 78 | 88 | 83 |

The following facts are also known.

I. Four of these students appeared in each of the English, Hindi, Science, and Social Science examinations.
II. The student who missed Mathematics examination did not miss any other examination.
III. One of the students who missed the Hindi examination did not miss any other examination. The other student who missed the Hindi examination also missed the Science examination.

Who among the following did not appear for the Mathematics examination?

A. Foni B. Alva C. Esha D. Carl

cat2020-set1 logical-reasoning logic-puzzles

## 2.18.374 Logic Puzzles: CAT 2020 Set-1 | Question: 42 top

## 2.18.377 Logic Puzzles: CAT 2020 Set-2 | Question: 31 top

A chain of departmental stores has outlets in Delhi, Mumbai, Bengaluru and Kolkata. The sales are categorized by its three departments – 'Apparel', 'Electronics', and 'HomeDecor'. An Accountant has been asked to prepare a summary of the 2018 and 2019 sales amounts for an internal report. He has collated partial information and prepared the following table.

| Sales Amounts (Crore Rupees) | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| | Delhi | | Mumbai | | Bengaluru | | Kolkata | |
| | 2018 | 2019 | 2018 | 2019 | 2018 | 2019 | 2018 | 2019 |
| Apparels | - | - | - | - | - | - | - | 54 |
| Electronics | 78 | 98 | 82 | 102 | 90 | 70 | 80 | 100 |
| HomeDecor | - | 100 | - | 72 | - | 80 | - | 54 |

The following additional information is known.

i. The sales amounts in the Apparel departments were the same for Delhi and Kolkata in 2018.
ii. The sales amounts in the Apparel departments were the same for Mumbai and Bengaluru in 2018. This sales amount

matched the sales amount in the Apparel departments for Delhi in 2019.

iii. The sales amounts in the HomeDecor departments were the same for Mumbai and Kolkata in 2018.

iv. The sum of the sales amounts for four Electronics departments increased by the same amount as the sum of the sales amounts of four Apparel departments from 2018 to 2019.

v. The total sales amounts of the four HomeDecor departments increased by Rs 70 Crores from 2018 to 2019.

vi. The sales amounts in the HomeDecor departments Delhi and Bengaluru each increased by Rs 20 crores from 2018 to 2019.

vii. The sales amounts in the Apparel departments of Delhi and Bengaluru each increased by the same amount in 2019 from 2018. The sales amounts in the Apparel departments of Mumbai and Kolkata also each increased by the same amount in 2019 from 2018.

viii. The sales amounts in the Apparel departments of Delhi, Kolkata and Bengaluru in 2019 followed an Arithmetic Progression.

In HomeDecor departments of which cities were the sales amounts the highest in 2018 and 2019, respectively?

A. Delhi and Delhi B. Mumbai and Mumbai C. Bengaluru and Delhi D. Mumbai and Delhi

cat2020-set2 logical-reasoning logic-puzzles

## 2.18.378 Logic Puzzles: CAT 2020 Set-2 | Question: 32 top

What was the total sales amount, in Crore Rupees, in 2019 for the chain of departmental stores?

A. 750 B. 150 C. 600 D. 900

cat2020-set2 logical-reasoning logic-puzzles

## 2.18.381 Logic Puzzles: CAT 2020 Set-2 | Question: 39 top

The humanities department of a college is planning to organize eight seminars, one for each of the eight doctoral students - A, B, C, D, E, F, G and H. Four of them are from Economics, three from sociology and one from Anthropology department. Each student is guided by one among P, Q, R, S and T. Two students are guided by of P, R and T, while one student is guided by each of Q and S. Each student is guided by a guide belonging to their department.

Each seminar is to be scheduled in one of four consecutive 30-minute slots starting at 9 : 00 am, 9 : 30 am, 10 : 00 am

and $10:30$ am on the same day. More than one seminars can be scheduled in a slot, provided the guide is free. Only three rooms are available and hence at the most three seminars can be scheduled in a slot. Students who are guided by the same guide must be scheduled in consecutive slots.

The following additional facts are also known.

1. Seminars by students from Economics are scheduled in each of the four slots.
2. A's is the only seminar that is scheduled at $10:00$ am. A is guided by R.
3. F is an Anthropology student whose seminar is scheduled at $10:30$ am.
4. The seminar of a Sociology student is scheduled at $9:00$ am.
5. B and G are both Sociology students, whose seminars are scheduled in the same slot. The seminar of an Economics student, who is guided by T, is also scheduled in the same slot.
6. P, who is guiding both B and C, has students scheduled in the first two slots.
7. A and G are scheduled in two consecutive slots.

Which one of the following statements is true?

A. Three seminars are scheduled in the last slot.
B. Only one seminar is scheduled in the second slot.
C. Two seminars are scheduled in the first slot.
D. Three seminars are scheduled in the first slot.

The humanities department of a college is planning to organize eight seminars, one for each of the eight doctoral students -A, B, C, D, E, F, G and H. Four of them are from Economics, three from Sociology and one from Anthropology department. Each student is guided by one among P, Q, R, S and T. Two students are guided by of P, R and T, while one student is guided by each of Q and S. Each student is guided by a guide belonging to their department.

Each seminar is to be scheduled in one of four consecutive 30-minute slots starting at $9:00$ am, $9:30$ am, $10:00$ am and $10:30$ am on the same day. More than one seminars can be scheduled in a slot, provided the guide is free. Only three rooms are available and hence at the most three seminars can be scheduled in a slot. Students who are guided by the same guide must be scheduled in consecutive slots.

The following additional facts are also known.

1. Seminars by students from Economics are scheduled in each of the four slots.
2. A's is the only seminar that is scheduled at $10:00$ am. A is guided by R.
3. F is an Anthropology student whose seminar is scheduled at $10:30$ am.
4. The seminar of a Sociology student is scheduled at $9:00$ am.
5. B and G are both Sociology students, whose seminars are scheduled in the same slot. The seminar of an Economics student, who is guided by T, is also scheduled in the same slot.
6. P, who is guiding both B and C, has students scheduled in the first two slots.
7. A and G are scheduled in two consecutive slots.

If D is scheduled in a slot later than Q's, then which of the following two statement(s) is (are) true ?

i. E and H are guided by T.
ii. G is guided by Q.

A. Only (ii)
B. Neither (i) nor (ii)
C. Both (i) and (ii)
D. Only (i)

## 2.18.385 Logic Puzzles: CAT 2020 Set-2 | Question: 43 top

The Humanities department of a college is planning to organize eight seminars, one for each of the eight doctoral students – A, B, C, D, E, F, G and H. Four of them are from Economics, three from Sociology and one from Anthropology department. Each student is guided by one among P, Q, R, S and T. Two students are guided by of P, R and T, while one student is guided by each of Q and S. Each student is guided by a guide belonging to their department.

Each seminar is to be scheduled in one of four consecutive 30–minute slots starting at $9:00$ am, $9:30$ am, $10:00$ am and $10:30$ am on the same day. More than one seminars can be scheduled in a slot, provided the guide is free. Only three rooms are available and hence at the most three seminars can be scheduled in a slot. Students who are guided by the same guide must be scheduled in consecutive slots.

The following additional facts are also known.

1. Seminars by students from Economics are scheduled in each of the four slots.
2. A's is the only seminar that is scheduled at $10:00$ am. A is guided by R.
3. F is an Anthropology student whose seminar is scheduled at $10:30$ am.
4. The seminar of a Sociology student is scheduled at $9:00$ am.
5. B and G are both Sociology students, whose seminars are scheduled in the same slot. The seminar of an Economics student, who is guided by T, is also scheduled in the same slot.

6. P, who is guiding both B and C, has students scheduled in the first two slots.
7. A and G are scheduled in two consecutive slots.

If E and Q are both scheduled in the same slot, then which of the following statements BEST describes the relationship between D, H and T ?

A. Both D and H are guided by T.
B. At least one of D and H is guided by T.
C. Exactly one of D and H is guided by T.
D. Neither D nor H is guided by T.

cat2020-set2 logical-reasoning logic-puzzles

## 2.18.386 Logic Puzzles: CAT 2020 Set-2 | Question: 44 top

The humanities department of a college is planning to organize eight seminars, one for each of the eight doctoral students – A, B, C, D, E, F, G and H. Four of them are from Economics, three from Sociology and one from Anthropology department. Each student is guided by one among P, Q, R, S and T. Two students are guided by of P, R and T, while one student is guided by each of Q and S. Each student is guided by a guide belonging to their department.

Each seminar is to be scheduled in one of four consecutive 30–minute slots starting at 9 : 00 am, 9 : 30 am, 10 : 00 am and 10 : 30 am on the same day. More than one seminars can be scheduled in a slot, provided the guide is free. Only three rooms are available and hence at the most three seminars can be scheduled in a slot. Students who are guided by the same guide must be scheduled in consecutive slots.

The following additional facts are also known.

1. Seminars by students from Economics are scheduled in each of the four slots.
2. A's is the only seminar that is scheduled at 10 : 00 am. A is guided by R.
3. F is an Anthropology student whose seminar is scheduled at 10 : 30 am.
4. The seminar of a Sociology student is scheduled at 9 : 00 am.
5. B and G are both Sociology students, whose seminars are scheduled in the same slot. The seminar of an Economics student, who is guided by T, is also scheduled in the same slot.
6. P, who is guiding both B and C, has students scheduled in the first two slots.
7. A and G are scheduled in two consecutive slots.

If D is scheduled in the slot immediately before Q's, then which of the following is NOT necessarily true ?

A. G is guided by Q.
B. E is guided by R.
C. D is guided by T.
D. F is guided by S.

cat2020-set2 logical-reasoning logic-puzzles

## 2.18.387 Logic Puzzles: CAT 2020 Set-2 | Question: 47 top

In an election several candidates contested for a constituency. In any constituency, the winning candidate was the one who polled the highest number of votes, the first runner up was the one who polled the second highest number of votes, the second runner up was the one who polled the third highest number of votes, and so on. There were no ties (in terms of number of votes polled by the candidates) in any of the constituencies in this election.

In an electoral system, a security deposit is the sum of money that a candidate is required to pay to the election commission before he or she is permitted to contest. Only the defeated candidates (i.e., one who is not the winning candidate) who fail to secure more than one sixth of the valid votes polled in the constituency, lose their security deposits.

The following table provides some incomplete information about votes polled in four constituencies: A, B, C and D, in this election.

| | Constituency | | | |
|---|---|---|---|---|
| | A | B | C | D |
| No. of candidates contesting | 10 | 12 | 5 | 8 |
| Total No. of valid votes polled | 5,00,000 | 3,25,000 | 6,00,030 | |
| No. of votes polled by the winning candidate | 2,75,000 | 48,750 | | |
| No. of votes polled by the first runner up | 95,000 | | | 37,500 |
| No. of votes polled by the second runner up | | | | 30,000 |
| % of valid votes polled by the third runner up | | | | 10% |

The following additional facts are known:

1. The first runner up polled 10,000 more votes than the second runner up in constituency A.
2. None of the candidates who contested in constituency C lost their security deposit. The difference in votes polled by any pair of candidates in this constituency was at least 10,000.

3. The winning candidate in constituency $D$ polled $5\%$ of valid votes more than that of the first runner up. All the candidates who lost their security deposits while contesting for this constituency, put together, polled $35\%$ of the valid votes.

What BEST can be concluded about the number of votes polled by the winning candidate in constituency $C$?

A. $1,40,006$
B. less than $2,00,010$
C. $1,40,010$
D. between $1,40,005$ and $1,40,010$

## 2.18.390 Logic Puzzles: CAT 2020 Set-2 | Question: 50 top

In an election several candidates contested for a constituency. In any constituency, the winning candidate was the one who polled the highest number of votes, the first runner up was the one who polled the second highest number of votes, the second runner up was the one who polled the third highest number of votes, and so on. There were no ties (in terms of number of votes polled by the candidates) in any of the constituencies in this election.

In an electoral system, a security deposit is the sum of money that a candidate is required to pay to the election commission before he or she is permitted to contest. Only the defeated candidates (i.e., one who is not the winning candidate) who fail to secure more than one sixth of the valid votes polled in the constituency, lose their security deposits.

The following table provides some incomplete information about votes polled in four constituencies: $A$, $B$, $C$ and $D$, in this election.

| | Constituency | | | |
|---|---|---|---|---|
| | A | B | C | D |
| No. of candidates contesting | 10 | 12 | 5 | 8 |
| Total No. of valid votes polled | 5,00,000 | 3,25,000 | 6,00,030 | |
| No. of votes polled by the winning candidate | 2,75,000 | 48,750 | | |
| No. of votes polled by the first runner up | 95,000 | | | 37,500 |
| No. of votes polled by the second runner up | | | | 30,000 |
| % of valid votes polled by the third runner up | | | | 10% |

The following additional facts are known:

1. The first runner up polled $10,000$ more votes than the second runner up in constituency $A$.
2. None of the candidates who contested in constituency $C$ lost their security deposit. The difference in votes polled by any pair of candidates in this constituency was at least $10,000$.
3. The winning candidate in constituency $D$ polled $5\%$ of valid votes more than that of the first runner up. All the candidates who lost their security deposits while contesting for this constituency, put together, polled $35\%$ of the valid votes.

For all the four constituencies taken together, what was the approximate number of votes polled by all the candidates who lost their security deposit expressed as a percentage of the total valid votes from these four constituencies?

A. $23.91\%$  B. $23.54\%$  C. $32.00\%$  D. $38.25\%$

cat2020-set2 logical-reasoning logic-puzzles

## 2.18.391 Logic Puzzles: CAT 2020 Set-3 | Question: 27 top

The Hi-Lo game is a four-player game played in six rounds. In every round, each player chooses to bid Hi or Lo. The bids are made simultaneously. If all four bid Hi, then all four lose $1$ point each. If three players bid Hi and one bids Lo, then the players bidding Hi gain $1$ point each and the player bidding Lo loses $3$ points. If two players bid Hi and two bid Lo, then the players bidding Hi gain $2$ points each and the players bidding Lo lose $2$ points each. If one player bids Hi and three bid Lo, then the player bidding Hi gains $3$ points and the players bidding Lo lose $1$ point each. If all four bid Lo, then all four gain $1$ point each.

Four players Arun, Bankim, Charu, and Dipak played the Hi-Lo game. the following facts are known about their game:

1. At the end of three rounds, Arun had scored $6$ points, Dipak had scored $2$ points, Bankim and Charu had scored $-2$ points each.
2. At the end of six rounds, Arun had scored $7$ points, Bankim and Dipak had scored $-1$ point each, and Charu had scored $-5$ points.
3. Dipak's score in the third round was less than his score in the first round but was more than his score in the second round.

4. In exactly two out of the six rounds, Arun was the only player who bid Hi.

What were the bids by Arun, Bankim, Charu, and Dipak, respectively in the first round ?

A. Hi, Lo, Lo, Lo
B. Lo, Lo, Lo, Hi
C. Hi, Hi, Lo, Lo
D. Hi, Lo, Lo, Hi

cat2020-set3 logical-reasoning logic-puzzles

## 2.18.392 Logic Puzzles: CAT 2020 Set-3 | Question: 32 top

The Hi-Lo game is a four-player game played in six rounds. In every round, each player chooses to bid Hi or Lo. The bids are made simultaneously. If all four bid Hi, then all four lose $1$ point each. If three players bid Hi and one bids Lo, then the players bidding Hi gain $1$ point each and the player bidding Lo loses $3$ points. If two players bid Hi and two bid Lo, then the players bidding Hi gain $2$ points each and the players bidding Lo lose $2$ points each. 3. Dipak's score in the third round was less than his score in the first round but was more than his score in the second round.
4. In exactly two out of the six rounds, Arun was the only player who bid Hi.

In which of the following rounds, was Arun $\mathrm{DEFINITELY}$ the only player to bid Hi ?

A. First
B. Fourth
C. Third
D. Second

cat2020-set3 logical-reasoning logic-puzzles

## 2.18.393 Logic Puzzles: CAT 2020 Set-3 | Question: 33 top

A survey of $600$ schools in India was conducted to gather information about their online teaching learning processes $(\mathrm{OTLP})$. The following four facilities were studied.

$\mathrm{F1}$ : Own software for $\mathrm{OTLP}$

$\mathrm{F2}$ : Trained teachers for $\mathrm{OTLP}$

$\mathrm{F3}$ : Training materials for $\mathrm{OTLP}$

$\mathrm{F4}$ : All students having Laptops

The following observations were summarized from the survey.

1. $80$ schools did not have any of the four facilities $-\mathrm{F1}, \mathrm{F2}, \mathrm{F3}, \mathrm{F4}$.
2. $40$ schools had all four facilities.
3. The number of schools with only $\mathrm{F1}$, only $\mathrm{F2}$, only $\mathrm{F3}$, and only $\mathrm{F4}$ was $25, 30, 26$ and $20$ respectively.
4. The number of schools with exactly three of the facilities was the same irrespective of which three were considered.
5. $313$ schools had $\mathrm{F2}$.
6. $26$ schools had only $\mathrm{F2}$ and $\mathrm{F3}$ $(\text{but neither F1 nor F4})$.
7. Among the schools having $\mathrm{F4}, 24$ had only $\mathrm{F3}$, and $45$ had only $\mathrm{F2}$.
8. $162$ schools had both $\mathrm{F1}$ and $\mathrm{F2}$.
9. The number of schools having $\mathrm{F1}$ was the same as the number of schools having $\mathrm{F4}$.

What was the total number of schools having exactly three of the four facilities ?

A. 200
B. 50
C. 80
D. 64

cat2020-set3 logical-reasoning logic-puzzles

## 2.18.394 Logic Puzzles: CAT 2020 Set-3 | Question: 34 top

A survey of $600$ schools in India was conducted to gather information about their online teaching learning processes $(\mathrm{OTLP})$. The following four facilities were studied.

$\mathrm{F1}$ : Own software for $\mathrm{OTLP}$

$\mathrm{F2}$ : Trained teachers for $\mathrm{OTLP}$

$\mathrm{F3}$ : Training materials for $\mathrm{OTLP}$

$F4$ : All students having Laptops

The following observations were summarized from the survey.

1. 80 schools did not have any of the four facilities – $F1, F2, F3, F4$.
2. 40 schools had all four facilities.
3. The number of schools with only $F1$, only $F2$, only $F3$, and only $F4$ was $25, 30, 26$ and $20$ respectively.
4. The number of schools with exactly three of the facilities was the same irrespective of which three were considered.
5. 313 schools had $F2$.
6. 26 schools had only $F2$ and $F3$ (but neither F1 nor F4).

8. 162 schools had both $F1$ and $F2$.
9. The number of schools having $F1$ was the same as the number of schools having $F4$.

What was the number of schools having facilities $F2$ and $F4$

A. 185 B. 45 C. 95 D. 85

cat2020-set3 logical-reasoning logic-puzzles

## 2.18.395 Logic Puzzles: CAT 2020 Set-3 | Question: 37 top

Sixteen patients in a hospital must undergo a blood test for a disease. It is known that exactly one of them has the disease. The hospital has only eight testing kits and has decided to pool blood samples of patients into eight vials for the tests. The patients are numbered $1$ through $16$, and the vials are labelled $A, B, C, D, E, F, G$, and $H$. The following table shows the vials into which each patient's blood sample is distributed.

| Patient | Vials | Patient | Vials |
|---|---|---|---|
| 1 | B,D,F,H | 9 | A,D,F,H |
| 2 | B,D,F,G | 10 | A,D,F,G |
| 3 | B,D,E,H | 11 | A,D,E,H |
| 4 | B,D,E,G | 12 | A,D,E,G |
| 5 | B,C,F,H | 13 | A,C,F,H |
| 6 | B,C,F,G | 14 | A,C,F,G |
| 7 | B,C,E,H | 15 | A,C,E,H |
| 8 | B,C,E,G | 16 | A,C,E,G |

If a patient has the disease, then each vial containing his/her blood sample will test positive. If a vial tests positive, one of the patients whose blood samples were mixed in the vial has the disease. If a vial tests negative, then none of the patients whose blood samples were mixed in the vial has the disease.

Suppose vial $C$ tests positive and vials $A, E$ and $H$ test negative. Which patient has the disease ?

A. Patient 14 B. Patient 2 C. Patient 6 D. Patient 8

cat2020-set3 logical-reasoning logic-puzzles

## 2.18.396 Logic Puzzles: CAT 2020 Set-3 | Question: 38 top

Sixteen patients in a hospital must undergo a blood test for a disease. It is known that exactly one of them has the disease. The hospital has only eight testing kits and has decided to pool blood samples of patients into eight vials for the tests. The patients are numbered $1$ through $16$, and the vials are labelled $A, B, C, D, E, F, G$, and $H$. The following table shows the vials into which each patient's blood sample is distributed.

| Patient | Vials | Patient | Vials |
|---|---|---|---|
| 1 | B,D,F,H | 9 | A,D,F,H |
| 2 | B,D,F,G | 10 | A,D,F,G |
| 3 | B,D,E,H | 11 | A,D,E,H |
| 4 | B,D,E,G | 12 | A,D,E,G |
| 5 | B,C,F,H | 13 | A,C,F,H |
| 6 | B,C,F,G | 14 | A,C,F,G |
| 7 | B,C,E,H | 15 | A,C,E,H |
| 8 | B,C,E,G | 16 | A,C,E,G |

If a patient has the disease, then each vial containing his/her blood sample will test positive. If a vial tests positive, one of the patients whose blood samples were mixed in the vial has the disease. If a vial tests negative, then none of the patients whose

blood samples were mixed in the vial has the disease.

Suppose vial A tests positive and vials D and G test negative. Which of the following vials should we test next to identify the patient with the disease ?

A. Vial E B. Vial H C. Vial C D. Vial B

cat2020-set3 logical-reasoning logic-puzzles

## 2.18.397 Logic Puzzles: CAT 2020 Set-3 | Question: 39 top

Sixteen patients in a hospital must undergo a blood test for a disease. It is known that exactly one of them has the disease. The hospital has only eight testing kits and has decided to pool blood samples of patients into eight vials for the tests. The patients are numbered 1 through 16, and the vials are labelled A, B, C, D, E, F, G, and H. The following table shows the vials into which each patient's blood sample is distributed.

| Patient | Vials | Patient | Vials |
|---|---|---|---|
| 1 | B,D,F,H | 9 | A,D,F,H |
| 2 | B,D,F,G | 10 | A,D,F,G |
| 3 | B,D,E,H | 11 | A,D,E,H |
| 4 | B,D,E,G | 12 | A,D,E,G |
| 5 | B,C,F,H | 13 | A,C,F,H |
| 6 | B,C,F,G | 14 | A,C,F,G |
| 7 | B,C,E,H | 15 | A,C,E,H |
| 8 | B,C,E,G | 16 | A,C,E,G |

If a patient has the disease, then each vial containing his/her blood sample will test positive. If a vial tests positive, one of the patients whose blood samples were mixed in the vial has the disease. If a vial tests negative, then none of the patients whose blood samples were mixed in the vial has the disease.

Which of the following combinations of test results is NOT possible?

A. Vials A and G positive, vials D and E negative
B. Vials B and D positive, vials F and H negative
C. Vial B positive, vials C, F and H negative
D. Vials A and E positive, vials C and D negative

cat2020-set3 logical-reasoning logic-puzzles

## 2.18.398 Logic Puzzles: CAT 2020 Set-3 | Question: 40 top

Sixteen patients in a hospital must undergo a blood test for a disease. It is known that exactly one of them has the disease. The hospital has only eight testing kits and has decided to pool blood samples of patients into eight vials for the tests. The patients are numbered 1 through 16, and the vials are labelled A, B, C, D, E, F, G, and H. The following table shows the vials into which each patient's blood sample is distributed.

| Patient | Vials | Patient | Vials |
|---|---|---|---|
| 1 | B,D,F,H | 9 | A,D,F,H |
| 2 | B,D,F,G | 10 | A,D,F,G |
| 3 | B,D,E,H | 11 | A,D,E,H |
| 4 | B,D,E,G | 12 | A,D,E,G |
| 5 | B,C,F,H | 13 | A,C,F,H |
| 6 | B,C,F,G | 14 | A,C,F,G |
| 7 | B,C,E,H | 15 | A,C,E,H |
| 8 | B,C,E,G | 16 | A,C,E,G |

If a patient has the disease, then each vial containing his/her blood sample will test positive. If a vial tests positive, one of the patients whose blood samples were mixed in the vial has the disease. If a vial tests negative, then none of the patients whose blood samples were mixed in the vial has the disease.

Suppose one of the lab assistants accidentally mixed two patients' blood samples before they were distributed to the vials. Which of the following correctly represents the set of all possible numbers of positive test results out of the eight vials ?

A. $\{4, 5\}$ B. $\{5, 6, 7, 8\}$ C. $\{4, 5, 6, 7, 8\}$ D. $\{4, 5, 6, 7\}$

## 2.18.399 Logic Puzzles: CAT 2020 Set-3 | Question: 41 top

XYZ organization got into the business of delivering groceries to home at the beginning of the last month. They have a two-day delivery promise. However, their deliveries are unreliable. An order booked on a particular day may be delivered the next day or the day after. If the order is not delivered at the end of two days, then the order is declared as lost at the end of the second day. XYZ then does not deliver the order, but informs the customer, marks the order as lost, returns the payment and pays a penalty for non-delivery.

The following table provides details about the operations of XYZ for a week of the last month. The first column gives the date, the second gives the cumulative number of orders that were booked up to and including that day. The third column represents the number of orders delivered on that day. The last column gives the cumulative number of orders that were lost up to and including that day.

It is known that the numbers of orders that were booked on the 11th, 12th, and 13th of the last month that took two days to deliver were 4, 6, and 8 respectively.

| Day | Cumulative orders booked | Orders delivered on day | Cumulative orders lost |
|---|---|---|---|
| 13th | 219 | 11 | 91 |
| 14th | 249 | 27 | 92 |
| 15th | 277 | 23 | 94 |
| 16th | 302 | 11 | 106 |
| 17th | 327 | 21 | 118 |
| 18th | 332 | 13 | 120 |
| 19th | 337 | 14 | 129 |

Among the following days, the largest fraction of orders booked on which day was lost ?

A. 14th
B. 13th
C. 15th
D. 16th

cat2020-set3 logical-reasoning logic-puzzles

## 2.18.400 Logic Puzzles: CAT 2020 Set-3 | Question: 42 top

XYZ organization got into the business of delivering groceries to home at the beginning of the last month. They have a two-day delivery promise. However, their deliveries are unreliable. An order booked on a particular day may be delivered the next day or the day after. If the order is not delivered at the end of two days, then the order is declared as lost at the end of the second day. XYZ then does not deliver the order, but informs the customer, marks the order as lost, returns the payment and pays a penalty for non-delivery.

The following table provides details about the operations of XYZ for a week of the last month. The first column gives the date, the second gives the cumulative number of orders that were booked up to and including that day. The third column represents the number of orders delivered on that day. The last column gives the cumulative number of orders that were lost up to and including that day.

It is known that the numbers of orders that were booked on the 11th, 12th, and 13th of the last month that took two days to deliver were 4, 6, and 8 respectively.

| Day | Cumulative orders booked | Orders delivered on day | Cumulative orders lost |
|---|---|---|---|
| 13th | 219 | 11 | 91 |
| 14th | 249 | 27 | 92 |
| 15th | 277 | 23 | 94 |
| 16th | 302 | 11 | 106 |
| 17th | 327 | 21 | 118 |
| 18th | 332 | 13 | 120 |
| 19th | 337 | 14 | 129 |

On which of the following days was the number of orders booked the highest ?

A. 13th
B. 15th
C. 12th
D. 14th

cat2020-set3 logical-reasoning logic-puzzles

## 2.18.401 Logic Puzzles: CAT 2020 Set-3 | Question: 43 top

XYZ organization got into the business of delivering groceries to home at the beginning of the last month. They have a two-day delivery promise. However, their deliveries are unreliable. An order booked on a particular day may be delivered the next

day or the day after. If the order is not delivered at the end of two days, then the order is declared as lost at the end of the second day. XYZ then does not deliver the order, but informs the customer, marks the order as lost, returns the payment and pays a penalty for non-delivery.

The following table provides details about the operations of XYZ for a week of the last month. The first column gives the date, the second gives the cumulative number of orders that were booked up to and including that day. The third column represents the number of orders delivered on that day. The last column gives the cumulative number of orders that were lost up to and including that day.

It is known that the numbers of orders that were booked on the 11th, 12th, and 13th of the last month that took two days to deliver were 4, 6, and 8 respectively.

| Day | Cumulative orders booked | Orders delivered on day | Cumulative orders lost |
|---|---|---|---|
| 13th | 219 | 11 | 91 |
| 14th | 249 | 27 | 92 |
| 15th | 277 | 23 | 94 |
| 16th | 302 | 11 | 106 |
| 17th | 327 | 21 | 118 |
| 18th | 332 | 13 | 120 |
| 19th | 337 | 14 | 129 |

The delivery ratio for a given day is defined as the ratio of the number of orders booked on that day which are delivered on the next day to the number of orders booked on that day which are delivered on the second day after booking. On which of the following days, was the delivery ratio the highest ?

A. 13th
B. 16th
C. 14th
D. 15th

cat2020-set3 logical-reasoning logic-puzzles

## 2.18.402 Logic Puzzles: CAT 2020 Set-3 | Question: 44 top

XYZ organization got into the business of delivering groceries to home at the beginning of the last month. They have a two-day delivery promise. However, their deliveries are unreliable. An order booked on a particular day may be delivered the next day or the day after. If the order is not delivered at the end of two days, then the order is declared as lost at the end of the second day. XYZ then does not deliver the order, but informs the customer, marks the order as lost, returns the payment and pays a penalty for non-delivery.

The following table provides details about the operations of XYZ for a week of the last month. The first column gives the date, the second gives the cumulative number of orders that were booked up to and including that day. The third column represents the number of orders delivered on that day. The last column gives the cumulative number of orders that were lost up to and including that day.

It is known that the numbers of orders that were booked on the 11th, 12th, and 13th of the last month that took two days to deliver were 4, 6, and 8 respectively.

| Day | Cumulative orders booked | Orders delivered on day | Cumulative orders lost |
|---|---|---|---|
| 13th | 219 | 11 | 91 |
| 14th | 249 | 27 | 92 |
| 15th | 277 | 23 | 94 |
| 16th | 302 | 11 | 106 |
| 17th | 327 | 21 | 118 |
| 18th | 332 | 13 | 120 |
| 19th | 337 | 14 | 129 |

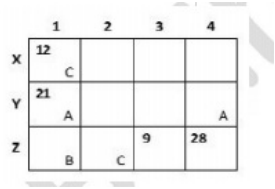
The average time taken to deliver orders booked on a particular day is computed as follows. Let the number of orders delivered the next day be $x$ and the number of orders delivered the day after be $y$. Then the average time to deliver order is $(x + 2y)/(x + y)$. On which of the following days was the average time taken to deliver orders booked the least ?

A. 14th
B. 16th
C. 15th
D. 13th

cat2020-set3 logical-reasoning logic-puzzles

## 2.18.403 Logic Puzzles: CAT 2020 Set-3 | Question: 45 top

A farmer had a rectangular land containing 205 trees. He distributed that land among his four daughters – Abha, Bina, Chitra and Dipti by dividing the land into twelve plots along three rows (X, Y, Z) and four columns (1, 2, 3, 4) as shown in the figure below:



The plots in rows $X, Y, Z$ contained mango, teak, and pine trees respectively. Each plot had trees in non-zero multiples of $3$ or $4$ and none of the plots had the same number of trees. Each daughter got an even number of plots. In the figure, the number mentioned in top left corner of a plot is the number of trees in that plot, while the letter in the bottom right corner is the first letter of the name of the daughter who got that plot (For example, Abha got the plot in row $Y$ and column $1$ containing $21$ trees). Some information in the figure got erased, but the following is known:

1. Abha got $20$ trees more than Chitra but $6$ trees less than Dipti.
2. The largest number of trees in a plot was $32$, but it was not with Abha.
3. The number of teak trees in Column $3$ was double of that in Column $2$ but was half of that in Column $4$.
4. Both Abha and Bina got a higher number of plots than Dipti.
5. Only Bina, Chitra and Dipti got corner plots.
6. Dipti got two adjoining plots in the same row.
7. Bina was the only one who got a plot in each row and each column.
8. Chitra and Dipti did not get plots which were adjacent to each other (either in row / column / diagonal).
9. The number of mango trees was doubled the number of teak trees.

How many mango trees were there in total ?

A. 84 B. 98 C. 49 D. 126

## 2.18.409 Logic Puzzles: CAT 2021 Set-1 | Data Interpretation and Logical Reasoning | Question: 11 top

A journal plans to publish 18 research papers, written by eight authors (A, B, C, D, E, F, G, and H) in four issues of the journal scheduled in January, April, July and October. Each of the research papers was written by exactly one of the eight authors. Five papers were scheduled in each of the first two issues, while four were scheduled in each of the last two issues. Every author wrote at least one paper and at most three papers. The total number of papers written by A, D, G and H was double the total number of papers written by the other four authors. Four of the authors were from India and two each were from Japan and China. Each author belonged to exactly one of the three areas – Manufacturing, Automation and Logistics. Four of the authors were from the Logistics area and two were from the Automation area. As per the journal policy, none of the authors could have more than one paper in any issue of the journal.

The following facts are also known.

1. F, an Indian author from the Logistics area, wrote only one paper. It was scheduled in the October issue.
2. A was from the Automation area and did not have a paper scheduled in the October issue.
3. None of the Indian authors were from the Manufacturing area and none of the Japanese or Chinese authors were from the Automation area.
4. A and H were from different countries, but had their papers scheduled in exactly the same issues.
5. C and E, both Chinese authors from different areas, had the same number of papers scheduled. Further, E had papers scheduled in consecutive issues of the journal but C did not.
6. B, from the Logistics area, had a paper scheduled in the April issue of the journal.
7. B and G belonged to the same country. None of their papers were scheduled in the same issue of the journal.
8. D, a Japanese author from the Manufacturing area, did not have a paper scheduled in the July issue.
9. C and H belonged to different areas.

Which of the following statement(s) MUST be true?

Statement A : Every issue had at least one paper by author(s) from each country.

Statement B : Every issue had at most two papers by author(s) from each area.

A. Neither of the statements
B. Both the statements
C. Only Statement A
D. Only Statement B

A. $5, 6, 7$ B. $6, 7, 5$ C. $6, 5, 7$ D. $6, 6, 6$

cat2021-set1 logical-reasoning logic-puzzles

## 2.18.413 Logic Puzzles: CAT 2021 Set-1 | Data Interpretation and Logical Reasoning | Question: 15 top

Amudha, Bharatan, Chandran, Dhinesh, Ezhil, Fani and Gowtham are seven people in a town. Any pair of them could either be strangers, acquaintances, or friends. All relationships are mutual. For example, if Amudha is a friend of Bharatan, then Bharatan is also a friend of Amudha. Similarly, if Amudha is a stranger to Bharatan, then Bharatan is also a stranger to Amudha.

Partial information about the number of friends, acquaintances, and strangers of each of these people among them is given in the table below.

| | No. of Friends | No. of Acquaintances | No. of Strangers |
|---|---|---|---|
| Amudha | | 1 | 4 |
| Bharatan | | | |
| Chandran | | 1 | |
| Dhinesh | | | 2 |
| Ezhil | | | 1 |
| Fani | 1 | | |
| Gowtham | | 3 | 2 |

The following additional facts are also known.

1. Amudha, Bharatan, and Chandran are mutual strangers.
2. Amudha, Dhinesh, and Fani are Ezil's friends.
3. Chandran and Gowtham are friends.
4. Every friend of Amudha is an acquaintance of Bharatan, and every acquaintance of Bharatan is a friend of Amudha.
5. Every friend of Bharatan is an acquaintance of Amudha, and every acquaintance of Amudha is a friend of Bharatan.

Who are Gowtham's acquaintances?

A. Amudha, Bharatan and Fani
B. Bharatan, Dhinesh and Ezhil
C. Dhinesh, Ezhil and Fani
D. Amudha, Dhinesh and Fani

cat2021-set1 logical-reasoning logic-puzzles

## 2.18.414 Logic Puzzles: CAT 2021 Set-1 | Data Interpretation and Logical Reasoning | Question: 16 top

Amudha, Bharatan, Chandran, Dhinesh, Ezhil, Fani and Gowtham are seven people in a town. Any pair of them could either be strangers, acquaintances, or friends. All relationships are mutual. For example, if Amudha is a friend of Bharatan, then Bharatan is also a friend of Amudha. Similarly, if Amudha is a stranger to Bharatan, then Bharatan is also a stranger to Amudha.

Partial information about the number of friends, acquaintances, and strangers of each of these people among them is given in the table below.

| | No. of Friends | No. of Acquaintances | No. of Strangers |
|---|---|---|---|
| Amudha | | 1 | 4 |
| Bharatan | | | |
| Chandran | | 1 | |
| Dhinesh | | | 2 |
| Ezhil | | | 1 |
| Fani | 1 | | |
| Gowtham | | 3 | 2 |

The following additional facts are also known.

1. Amudha, Bharatan, and Chandran are mutual strangers.
2. Amudha, Dhinesh, and Fani are Ezil's friends.

3. Chandran and Gowtham are friends.
4. Every friend of Amudha is an acquaintance of Bharatan, and every acquaintance of Bharatan is a friend of Amudha.
5. Every friend of Bharatan is an acquaintance of Amudha, and every acquaintance of Amudha is a friend of Bharatan.

Which of these pairs share the same type of relationship ?

A. (Chandran, Ezhil) and (Dhinesh, Gowtham)
B. (Bharatan, Chandran) and (Dhinesh, Ezhil)
C. (Bharatan, Ezhil) and (Fani, Gowtham)
D. (Amudha, Gowtham) and (Ezhil, Fani)

cat2021-set1 logical-reasoning logic-puzzles

## 2.18.415 Logic Puzzles: CAT 2021 Set-1 | Data Interpretation and Logical Reasoning | Question: 17 top

Amudha, Bharatan, Chandran, Dhinesh, Ezhil, Fani and Gowtham are seven people in a town. Any pair of them could either be strangers, acquaintances, or friends. All relationships are mutual. For example, if Amudha is a friend of Bharatan, then Bharatan is also a friend of Amudha. Similarly, if Amudha is a stranger to Bharatan, then Bharatan is also a stranger to Amudha.

Partial information about the number of friends, acquaintances, and strangers of each of these people among them is given in the table below.

| | No. of Friends | No. of Acquaintances | No. of Strangers |
|---|---|---|---|
| Amudha | | 1 | 4 |
| Bharatan | | | |
| Chandran | | 1 | |
| Dhinesh | | | 2 |
| Ezhil | | | 1 |
| Fani | 1 | | |
| Gowtham | | 3 | 2 |

The following additional facts are also known.

1. Amudha, Bharatan, and Chandran are mutual strangers.
2. Amudha, Dhinesh, and Fani are Ezil's friends.
3. Chandran and Gowtham are friends.
4. Every friend of Amudha is an acquaintance of Bharatan, and every acquaintance of Bharatan is a friend of Amudha.
5. Every friend of Bharatan is an acquaintance of Amudha, and every acquaintance of Amudha is a friend of Bharatan.

Who is an acquaintance of Amudha ?

A. Ezhil B. Dhinesh C. Fani D. Gowtham

cat2021-set1 logical-reasoning logic-puzzles

## 2.18.416 Logic Puzzles: CAT 2021 Set-1 | Data Interpretation and Logical Reasoning | Question: 18 top

Amudha, Bharatan, Chandran, Dhinesh, Ezhil, Fani and Gowtham are seven people in a town. Any pair of them could either be strangers, acquaintances, or friends. All relationships are mutual. For example, if Amudha is a friend of Bharatan, then Bharatan is also a friend of Amudha. Similarly, if Amudha is a stranger to Bharatan, then Bharatan is also a stranger to Amudha.

Partial information about the number of friends, acquaintances, and strangers of each of these people among them is given in the table below.

| | No. of Friends | No. of Acquaintances | No. of Strangers |
|---|---|---|---|
| Amudha | | 1 | 4 |
| Bharatan | | | |
| Chandran | | 1 | |
| Dhinesh | | | 2 |
| Ezhil | | | 1 |
| Fani | 1 | | |
| Gowtham | | 3 | 2 |

The following additional facts are also known.

1. Amudha, Bharatan, and Chandran are mutual strangers.
2. Amudha, Dhinesh, and Fani are Ezil's friends.
3. Chandran and Gowtham are friends.
4. Every friend of Amudha is an acquaintance of Bharatan, and every acquaintance of Bharatan is a friend of Amudha.
5. Every friend of Bharatan is an acquaintance of Amudha, and every acquaintance of Amudha is a friend of Bharatan.

Who is an acquaintance of Chandran ?

A. Bharatan B. Dhinesh C. Ezhil D. Fani

cat2021-set1 logical-reasoning logic-puzzles

## 2.18.417 Logic Puzzles: CAT 2021 Set-1 | Data Interpretation and Logical Reasoning | Question: 5 top

Ganga, Kaveri, and Narmada are three women who buy four raw materials (Mango, Apple, Banana and Milk) and sell five finished products (Mango smoothie, Apple smoothie, Banana smoothie, Mixed fruit smoothie and Fruit salad). Table-1 gives information about the raw materials required to produce the five finished products. One unit of a finished product requires one unit of each of the raw materials mentioned in the second column of the table.

**Table-1**

| Finished product | Raw materials required |
|---|---|
| Mango smoothie | Mango, Milk |
| Apple smoothie | Apple, Milk |
| Banana smoothie | Banana, Milk |
| Mixed fruit smoothie | Mango, Apple, Banana, Milk |
| Fruit salad | Mango, Apple, Banana |

One unit of milk, mango, apple, and banana cost ₹5, ₹3, ₹2, and ₹1 respectively. Each unit of a finished product is sold for a profit equal to two times the number of raw materials used to make that product. For example, apple smoothie is made with two raw materials (apple and milk) and will be sold for a profit of ₹4 per unit. Leftover raw materials are sold during the last business hour of the day for a loss of ₹1 per unit.

The amount, in rupees, receives from sales (revenue) for each woman in each of the four business hours of the day is given in Table-2.

**Table-2**

| Business Hour | Ganga | Kaveri | Narmada |
|---|---|---|---|
| Hour 1 | 23 | 19 | 31 |
| Hour 2 | 21 | 22 | 21 |
| Hour 3 | 29 | 30 | 23 |
| Hour 4 (last hour) | 30 | 27 | 22 |

The following additional facts are known.

1. No one except possibly Ganga sold any Mango smoothie.
2. Each woman sold either zero or one unit of any single finished product in any hour.
3. Each woman had exactly one unit each of two different raw materials as leftovers.
4. No one had any banana leftover.

What BEST can be concluded about the number of units of fruit salad sold in the first hour?

A. Either 0 or 1 or 2 B. Exactly 2 C. Either 1 or 2 D. Exactly 1

cat2021-set1 logical-reasoning logic-puzzles

## 2.18.418 Logic Puzzles: CAT 2021 Set-1 | Data Interpretation and Logical Reasoning | Question: 6 top

Ganga, Kaveri, and Narmada are three women who buy four raw materials (Mango, Apple, Banana and Milk) and sell five finished products (Mango smoothie, Apple smoothie, Banana smoothie, Mixed fruit smoothie and Fruit salad). Table-1 gives information about the raw materials required to produce the five finished products. One unit of a finished product requires one unit of each of the raw materials mentioned in the second column of the table.

**Table-1**

| Finished product | Raw materials required |
|---|---|
| Mango smoothie | Mango, Milk |
| Apple smoothie | Apple, Milk |
| Banana smoothie | Banana, Milk |
| Mixed fruit smoothie | Mango, Apple, Banana, Milk |
| Fruit salad | Mango, Apple, Banana |

One unit of milk, mango, apple, and banana cost ₹5, ₹3, ₹2, and ₹1 respectively. Each unit of a finished product is sold for a profit equal to two times the number of raw materials used to make that product. For example, apple smoothie is made with two raw materials (apple and milk) and will be sold for a profit of ₹4 per unit. Leftover raw materials are sold during the last business hour of the day for a loss of ₹1 per unit.

The amount, in rupees, receives from sales (revenue) for each woman in each of the four business hours of the day is given in Table-2.

**Table-2**

| Business Hour | Ganga | Kaveri | Narmada |
|---|---|---|---|
| Hour 1 | 23 | 19 | 31 |
| Hour 2 | 21 | 22 | 21 |
| Hour 3 | 29 | 30 | 23 |
| Hour 4 (last hour) | 30 | 27 | 22 |

The following additional facts are known.

1. No one except possibly Ganga sold any Mango smoothie.
2. Each woman sold either zero or one unit of any single finished product in any hour.
3. Each woman had exactly one unit each of two different raw materials as leftovers.
4. No one had any banana leftover.

Which of the following is NECESSARILY true ?

A. Ganga did not sell any leftover apples.

B. Ganga did not sell any leftover mangoes.

C. Kaveri sold one unit of leftover mangoes.

D. Narmada sold one unit of leftover milk.

cat2021-set1 logical-reasoning logic-puzzles

## 2.18.419 Logic Puzzles: CAT 2021 Set-1 | Data Interpretation and Logical Reasoning | Question: 7 top

Ganga, Kaveri, and Narmada are three women who buy four raw materials (Mango, Apple, Banana and Milk) and sell five finished products (Mango smoothie, Apple smoothie, Banana smoothie, Mixed fruit smoothie and Fruit salad). Table-1 gives information about the raw materials required to produce the five finished products. One unit of a finished product requires one unit of each of the raw materials mentioned in the second column of the table.

**Table-1**

| Finished product | Raw materials required |
|---|---|
| Mango smoothie | Mango, Milk |
| Apple smoothie | Apple, Milk |
| Banana smoothie | Banana, Milk |
| Mixed fruit smoothie | Mango, Apple, Banana, Milk |
| Fruit salad | Mango, Apple, Banana |

One unit of milk, mango, apple, and banana cost ₹5, ₹3, ₹2, and ₹1 respectively. Each unit of a finished product is sold for a profit equal to two times the number of raw materials used to make that product. For example, apple smoothie is made with two raw materials (apple and milk) and will be sold for a profit of ₹4 per unit. Leftover raw materials are sold during the last business hour of the day for a loss of ₹1 per unit.

The amount, in rupees, receives from sales (revenue) for each woman in each of the four business hours of the day is given in Table-2.

**Table-2**

| Business Hour | Ganga | Kaveri | Narmada |
|---|---|---|---|
| Hour 1 | 23 | 19 | 31 |
| Hour 2 | 21 | 22 | 21 |
| Hour 3 | 29 | 30 | 23 |
| Hour 4 (last hour) | 30 | 27 | 22 |

The following additional facts are known.

1. No one except possibly Ganga sold any Mango smoothie.
2. Each woman sold either zero or one unit of any single finished product in any hour.
3. Each woman had exactly one unit each of two different raw materials as leftovers.
4. No one had any banana leftover.

What BEST can be concluded about the total number of units of milk the three women had in the beginning ?

A. Either 18 or 19 or 20 units.
B. Either 19 or 20 units.
C. Either 18 or 19 units.
D. Either 17 or 18 or 19 units.

## 2.18.420 Logic Puzzles: CAT 2021 Set-1 | Data Interpretation and Logical Reasoning | Question: 9 top

A journal plans to publish 18 research papers, written by eight authors (A, B, C, D, E, F, G, and H) in four issues of the journal scheduled in January, April, July and October. Each of the research papers was written by exactly one of the eight authors. Five papers were scheduled in each of the first two issues, while four were scheduled in each of the last two issues. Every author wrote at least one paper and at most three papers. The total number of papers written by A, D, G and H was double the total number of papers written by the other four authors. Four of the authors were from India and two each were from Japan and China. Each author belonged to exactly one of the three areas – Manufacturing, Automation and Logistics. Four of the authors were from the Logistics area and two were from the Automation area. As per the journal policy, none of the authors could have more than one paper in any issue of the journal.

The following facts are also known.

1. F, an Indian author from the Logistics area, wrote only one paper. It was scheduled in the October issue.
2. A was from the Automation area and did not have a paper scheduled in the October issue.
3. None of the Indian authors were from the Manufacturing area and none of the Japanese or Chinese authors were from the Automation area.
4. A and H were from different countries, but had their papers scheduled in exactly the same issues.
5. C and E, both Chinese authors from different areas, had the same number of papers scheduled. Further, E had papers scheduled in consecutive issues of the journal but C did not.
6. B, from the Logistics area, had a paper scheduled in the April issue of the journal.
7. B and G belonged to the same country. None of their papers were scheduled in the same issue of the journal.
8. D, a Japanese author from the Manufacturing area, did not have a paper scheduled in the July issue.
9. C and H belonged to different areas.

What is the correct sequence of number of papers written by B, C, E and G, respectively ?

A. 3, 1, 1, 3 B. 1, 2, 2, 1 C. 1, 2, 2, 3 D. 1, 3, 3, 1

cat2021-set1 logical-reasoning logic-puzzles

## 2.18.421 Logic Puzzles: CAT 2021 Set-2 | Data Interpretation and Logical Reasoning | Question: 10 top

Ravi works in an online food-delivery company. After each delivery, customers rate Ravi on each of four parameters – Behaviour, Packaging, Hygiene, and Timeliness, on a scale from 1 to 9. If the total of the four rating points is 25 or more, then Ravi gets a bonus of ₹20 for that delivery. Additionally, a customer may or may not give Ravi a tip. If the customer gives a tip, it is either ₹30 or ₹50.

One day, Ravi made four deliveries – one to each of Atal, Bihari, Chirag and Deepak, and receives a total of ₹120 in bonus and tips. He did not get both a bonus and a tip from the same customer.

The following additional facts are also known.

1. In Timeliness, Ravi received a total of 21 points, and three of the customers gave him the same rating points in this parameter. Atal gave higher rating points than Bihari and Chirag in this parameter.
2. Ravi received distinct rating points in Packaging from the four customers adding up to 29 points. Similarly, Ravi received distinct rating points in Hygiene from the four customers adding up to 26 points.
3. Chirag gave the same rating points for Packaging and Hygiene.

4. Among the four customers, Bihari gave the highest rating points in Packaging, and Chirag gave the highest rating points in Hygiene.
5. Everyone rated Ravi between 5 and 7 in Behaviour. Unique maximum and minimum ratings in this parameter were given by Atal and Deepak respectively.
6. If the customers are ranked based on ratings given by them in individual parameters, then Atal's rank based on Packaging is the same as that based on Hygiene. This is also true for Deepak.

What rating did Deepak give on Packaging?

A. 8 B. 5 C. 7 D. 6

## 2.18.422 Logic Puzzles: CAT 2021 Set-2 | Data Interpretation and Logical Reasoning | Question: 11 top

The game of Chango is a game where two people play against each other, one of them wins and the other loses, i.e., there are no drawn Chango games. 12 players participated in a Chango championship. They were divided into four groups: Group A consisted of Aruna, Azul, and Arif; Group B consisted Brinda, Brij, and Biju; Group C consisted of Chitra, Chetan, and Chhavi; and Group D consisted of Dipen, Donna, and Deb.

Players within each group had a distinct rank going into the championship. The players have NOT been listed necessarily according to their ranks. In the group stage of the game, the second and third ranked players play against each other, and the winner of that game plays against the first ranked player of the group. The winner of this second game is considered as the winner of the group and enters a semi-final.

The winners from Groups A and B play against each other in one semi-final, while the winners from Groups C and D play against each other in the other semi-final. The winners of the two semi-finals play against each other in the final to decide the winner of the championship.

It is known that:

1. Chitra did not win the championship.
2. Aruna did not play against Arif. Brij did not play against Brinda.
3. Aruna, Biju, Chitra, and Dipen played three games each, Azul and Chetan played two games each, and the remaining players played one game each.

Who among the following was DEFINITELY NOT ranked first in his/her group?

A. Dipen B. Aruna C. Brij D. Chitra

cat2021-set2 logical-reasoning logic-puzzles

## 2.18.423 Logic Puzzles: CAT 2021 Set-2 | Data Interpretation and Logical Reasoning | Question: 12 top

The game of Chango is a game where two people play against each other, one of them wins and the other loses, i.e., there are no drawn Chango games. 12 players participated in a Chango championship. C. Dipen
D. Biju

cat2021-set2 logical-reasoning logic-puzzles

## 2.18.426 Logic Puzzles: CAT 2021 Set-2 | Data Interpretation and Logical Reasoning | Question: 15 top

Ten objects $o1, o2, \ldots, o10$ were distributed among Amar, Barat, Charles, Disha, and Elise. Each item went to exactly one person. Each person got exactly two of the items, and this pair of objects is called her/his bundle.

The following table shows how each person values each object.

| | o1 | o2 | o3 | o4 | o5 | o6 | o7 | o8 | o9 | o10 |
|---|---|---|---|---|---|---|---|---|---|---|
| **Amar** | 4 | 9 | 9 | 3 | 7 | 3 | 8 | 7 | 9 | 5 |
| **Barat** | 5 | 9 | 7 | 5 | 5 | 3 | 6 | 8 | 10 | 8 |
| **Charles** | 8 | 8 | 8 | 3 | 6 | 4 | 5 | 8 | 9 | 6 |
| **Disha** | 8 | 8 | 8 | 5 | 5 | 3 | 6 | 4 | 9 | 8 |
| **Elise** | 6 | 8 | 9 | 5 | 6 | 5 | 6 | 3 | 7 | 10 |

The value of any bundle by a person is the sum of that person's values of the objects in that bundle. A person $\mathrm{X}$ envies another person $\mathrm{Y}$ if $\mathrm{X}$ values $\mathrm{Y}$'s bundle more than $\mathrm{X}$'s own bundle.

For example, hypothetically suppose Amar's bundle consists of $\mathrm{o1}$ and $\mathrm{o2}$, and Barat's bundle consists of $\mathrm{o3}$ and $\mathrm{o4}$. Then Amar values his own bundle at $4 + 9 = 13$ and Barat's bundle at $9 + 3 = 12$. Hence Amar does not envy Barat. On the other hand, Barat values his own bundle at $7 + 5 = 12$ and Amar's bundle at $5 + 9 = 14$. Hence Barat envies Amar.

The following facts are known about the actual distribution of the objects among the five people.

1. If someone's value for an object is $10$, then she/he received that object.
2. Objects $\mathrm{o1}$, $\mathrm{o2}$, and $\mathrm{o3}$ were given to three different people.
3. Objects $\mathrm{o1}$ and $\mathrm{o8}$ were given to different people.
4. Three people value their own bundles at $16$. No one values her/his own bundle at a number higher than $16$.
5. Disha values her own bundle at an odd number. All others value their own bundles at an even number.
6. Some people who value their own bundles less than $16$ envy some other people who value their own bundle at $16$. No one else envies others.

What $\mathrm{BEST}$ can be said about object $\mathrm{o8}$?

A. o8 was given to Disha
B. o8 was given to Charles, or Disha
C. o8 was given to Charles
D. o8 was given to Amar, Charles or Disha

cat2021-set2 logical-reasoning logic-puzzles

## 2.18.427 Logic Puzzles: CAT 2021 Set-2 | Data Interpretation and Logical Reasoning | Question: 16 top

Ten objects $\mathrm{o1}, \mathrm{o2}, \ldots, \mathrm{o10}$ were distributed among Amar, Barat, Charles, Disha, and Elise. Each item went to exactly one person. Each person got exactly two of the items, and this pair of objects is called her/his bundle.

The following table shows how each person values each object.

| | o1 | o2 | o3 | o4 | o5 | o6 | o7 | o8 | o9 | o10 |
|---|---|---|---|---|---|---|---|---|---|---|
| **Amar** | 4 | 9 | 9 | 3 | 7 | 3 | 8 | 7 | 9 | 5 |
| **Barat** | 5 | 9 | 7 | 5 | 5 | 3 | 6 | 8 | 10 | 8 |
| **Charles** | 8 | 8 | 8 | 3 | 6 | 4 | 5 | 8 | 9 | 6 |
| **Disha** | 8 | 8 | 8 | 5 | 5 | 3 | 6 | 4 | 9 | 8 |
| **Elise** | 6 | 8 | 9 | 5 | 6 | 5 | 6 | 3 | 7 | 10 |

The value of any bundle by a person is the sum of that person's values of the objects in that bundle. A person $\mathrm{X}$ envies another person $\mathrm{Y}$ if $\mathrm{X}$ values $\mathrm{Y}$'s bundle more than $\mathrm{X}$'s own bundle.

For example, hypothetically suppose Amar's bundle consists of $\mathrm{o1}$ and $\mathrm{o2}$, and Barat's bundle consists of $\mathrm{o3}$ and $\mathrm{o4}$. Then Amar values his own bundle at $4 + 9 = 13$ and Barat's bundle at $9 + 3 = 12$. Hence Amar does not envy Barat. On the other hand, Barat values his own bundle at $7 + 5 = 12$ and Amar's bundle at $5 + 9 = 14$. Hence Barat envies Amar.

The following facts are known about the actual distribution of the objects among the five people.

1. If someone's value for an object is $10$, then she/he received that object.
2. Objects $\mathrm{o1}$, $\mathrm{o2}$, and $\mathrm{o3}$ were given to three different people.
3. Objects $\mathrm{o1}$ and $\mathrm{o8}$ were given to different people.
4. Three people value their own bundles at $16$. No one values her/his own bundle at a number higher than $16$.
5. Disha values her own bundle at an odd number. All others value their own bundles at an even number.

6. Some people who value their own bundles less than $16$ envy some other people who value their own bundle at $16$. No one else envies others.

Who among the following envies someone else?

A. Charles B. Amar C. Elise D. Barat

|---|---|---|---|---|---|---|---|---|---|---|
| **Amar** | 4 | 9 | 9 | 3 | 7 | 3 | 8 | 7 | 9 | 5 |
| **Barat** | 5 | 9 | 7 | 5 | 5 | 3 | 6 | 8 | 10 | 8 |
| **Charles** | 8 | 8 | 8 | 3 | 6 | 4 | 5 | 8 | 9 | 6 |
| **Disha** | 8 | 8 | 8 | 5 | 5 | 3 | 6 | 4 | 9 | 8 |
| **Elise** | 6 | 8 | 9 | 5 | 6 | 5 | 6 | 3 | 7 | 10 |

The value of any bundle by a person is the sum of that person's values of the objects in that bundle. A person $X$ envies another person $Y$ if $X$ values $Y$'s bundle more than $X$'s own bundle.

For example, hypothetically suppose Amar's bundle consists of $o1$ and $o2$, and Barat's bundle consists of $o3$ and $o4$. Then Amar values his own bundle at $4 + 9 = 13$ and Barat's bundle at $9 + 3 = 12$. Hence Amar does not envy Barat. On the other hand, Barat values his own bundle at $7 + 5 = 12$ and Amar's bundle at $5 + 9 = 14$. Hence Barat envies Amar.

The following facts are known about the actual distribution of the objects among the five people.

1. If someone's value for an object is $10$, then she/he received that object.
2. Objects $o1$, $o2$, and $o3$ were given to three different people.
3. Objects $o1$ and $o8$ were given to different people.
4. Three people value their own bundles at $16$. No one values her/his own bundle at a number higher than $16$.
5. Disha values her own bundle at an odd number. All others value their own bundles at an even number.
6. Some people who value their own bundles less than $16$ envy some other people who value their own bundle at $16$. No one else envies others.

Object $o4$ was given to

A. Disha B. Elisa C. Charles D. Barat

cat2021-set2 logical-reasoning logic-puzzles

## 2.18.429 Logic Puzzles: CAT 2021 Set-2 | Data Interpretation and Logical Reasoning | Question: 19 top

Ten objects $o1, o2, \ldots, o10$ were distributed among Amar, Barat, Charles, Disha, and Elise. Each item went to exactly one person. Each person got exactly two of the items, and this pair of objects is called her/his bundle.

The following table shows how each person values each object.

| | o1 | o2 | o3 | o4 | o5 | o6 | o7 | o8 | o9 | o10 |
|---|---|---|---|---|---|---|---|---|---|---|
| **Amar** | 4 | 9 | 9 | 3 | 7 | 3 | 8 | 7 | 9 | 5 |
| **Barat** | 5 | 9 | 7 | 5 | 5 | 3 | 6 | 8 | 10 | 8 |
| **Charles** | 8 | 8 | 8 | 3 | 6 | 4 | 5 | 8 | 9 | 6 |
| **Disha** | 8 | 8 | 8 | 5 | 5 | 3 | 6 | 4 | 9 | 8 |
| **Elise** | 6 | 8 | 9 | 5 | 6 | 5 | 6 | 3 | 7 | 10 |

The value of any bundle by a person is the sum of that person's values of the objects in that bundle. A person $X$ envies another person $Y$ if $X$ values $Y$'s bundle more than $X$'s own bundle.

For example, hypothetically suppose Amar's bundle consists of $o1$ and $o2$, and Barat's bundle consists of $o3$ and $o4$. Then Amar values his own bundle at $4 + 9 = 13$ and Barat's bundle at $9 + 3 = 12$. Hence Amar does not envy Barat. On the other hand, Barat values his own bundle at $7 + 5 = 12$ and Amar's bundle at $5 + 9 = 14$. Hence Barat envies Amar.

The following facts are known about the actual distribution of the objects among the five people.

1. If someone's value for an object is $10$, then she/he received that object.
2. Objects $o1$, $o2$, and $o3$ were given to three different people.
3. Objects $o1$ and $o8$ were given to different people.
4. Three people value their own bundles at $16$. No one values her/his own bundle at a number higher than $16$.
5. Disha values her own bundle at an odd number. All others value their own bundles at an even number.
6. Some people who value their own bundles less than $16$ envy some other people who value their own bundle at $16$. No one else envies others.

Object $o5$ was given to

A. Amar B. Disha C. Elise D. Charles

cat2021-set2 logical-reasoning logic-puzzles

## 2.18.430 Logic Puzzles: CAT 2021 Set-2 | Data Interpretation and Logical Reasoning | Question: 20 top

Ten objects $o1, o2, \ldots, o10$ were distributed among Amar, Barat, Charles, Disha, and Elise. Each item went to exactly one person. Each person got exactly two of the items, and this pair of objects is called her/his bundle.

The following table shows how each person values each object.

| | o1 | o2 | o3 | o4 | o5 | o6 | o7 | o8 | o9 | o10 |
|---|---|---|---|---|---|---|---|---|---|---|
| **Amar** | 4 | 9 | 9 | 3 | 7 | 3 | 8 | 7 | 9 | 5 |
| **Barat** | 5 | 9 | 7 | 5 | 5 | 3 | 6 | 8 | 10 | 8 |
| **Charles** | 8 | 8 | 8 | 3 | 6 | 4 | 5 | 8 | 9 | 6 |
| **Disha** | 8 | 8 | 8 | 5 | 5 | 3 | 6 | 4 | 9 | 8 |
| **Elise** | 6 | 8 | 9 | 5 | 6 | 5 | 6 | 3 | 7 | 10 |

The value of any bundle by a person is the sum of that person's values of the objects in that bundle. A person $X$ envies another person $Y$ if $X$ values $Y$'s bundle more than $X$'s own bundle.

For example, hypothetically suppose Amar's bundle consists of $o1$ and $o2$, and Barat's bundle consists of $o3$ and $o4$. Then Amar values his own bundle at $4 + 9 = 13$ and Barat's bundle at $9 + 3 = 12$. Hence Amar does not envy Barat. On the other hand, Barat values his own bundle at $7 + 5 = 12$ and Amar's bundle at $5 + 9 = 14$. Hence Barat envies Amar.

The following facts are known about the actual distribution of the objects among the five people.

1. If someone's value for an object is $10$, then she/he received that object.
2. Objects $o1$, $o2$, and $o3$ were given to three different people.
3. Objects $o1$ and $o8$ were given to different people.
4. Three people value their own bundles at $16$. No one values her/his own bundle at a number higher than $16$.
5. Disha values her own bundle at an odd number. All others value their own bundles at an even number.
6. Some people who value their own bundles less than $16$ envy some other people who value their own bundle at $16$. No one else envies others.

What $\text{BEST}$ can be said about the distribution of object $o1$ ?

A. o1 was given to Disha
B. o1 was given to Charles, Disha, or Elisa
C. o1 was given to Charles
D. o1 was given to Charles or Disha

cat2021-set2 logical-reasoning logic-puzzles

## 2.18.431 Logic Puzzles: CAT 2021 Set-2 | Data Interpretation and Logical Reasoning | Question: 6 top

Ravi works in an online food-delivery company. After each delivery, customers rate Ravi on each of four parameters – Behaviour, Packaging, Hygiene, and Timeliness, on a scale from $1$ to $9$. If the total of the four rating points is $25$ or more, then Ravi gets a bonus of ₹$20$ for that delivery. Additionally, a customer may or may not give Ravi a tip. If the customer gives a tip, it is either ₹$30$ or ₹$50$.

One day, Ravi made four deliveries – one to each of Atal, Bihari, Chirag and Deepak, and receives a total of ₹$120$ in bonus and tips. He did not get both a bonus and a tip from the same customer.

The following additional facts are also known.

1. In Timeliness, Ravi received a total of $21$ points, and three of the customers gave him the same rating points in this parameter. Atal gave higher rating points than Bihari and Chirag in this parameter.

2. Ravi received distinct rating points in Packaging from the four customers adding up to 29 points. Similarly, Ravi received distinct rating points in Hygiene from the four customers adding up to 26 points.
3. Chirag gave the same rating points for Packaging and Hygiene.
4. Among the four customers, Bihari gave the highest rating points in Packaging, and Chirag gave the highest rating points in Hygiene.
5. Everyone rated Ravi between 5 and 7 in Behaviour. Unique maximum and minimum ratings in this parameter were given by Atal and Deepak respectively.
6. If the customers are ranked based on ratings given by them in individual parameters, then Atal's rank based on Packaging is the same as that based on Hygiene. This is also true for Deepak.

The COMPLETE list of customers who gave the maximum total rating points to Ravi is

A. Bihari and Chirag B. Atal C. Bihari D. Atal and Bihari

cat2021-set2 logical-reasoning logic-puzzles

## 2.18.432 Logic Puzzles: CAT 2021 Set-2 | Data Interpretation and Logical Reasoning | Question: 8 top

Ravi works in an online food-delivery company. After each delivery, customers rate Ravi on each of four parameters – Behaviour, Packaging, Hygiene, and Timeliness, on a scale from 1 to 9. If the total of the four rating points is 25 or more, then Ravi gets a bonus of ₹20 for that delivery. Additionally, a customer may or may not give Ravi a tip. If the customer gives a tip, it is either ₹30 or ₹50.

One day, Ravi made four deliveries – one to each of Atal, Bihari, Chirag and Deepak, and receives a total of ₹120 in bonus and tips. He did not get both a bonus and a tip from the same customer.

The following additional facts are also known.

1. In Timeliness, Ravi received a total of 21 points, and three of the customers gave him the same rating points in this parameter. Atal gave higher rating points than Bihari and Chirag in this parameter.
2. Ravi received distinct rating points in Packaging from the four customers adding up to 29 points. Similarly, Ravi received distinct rating points in Hygiene from the four customers adding up to 26 points.
3. Chirag gave the same rating points for Packaging and Hygiene.
4. Among the four customers, Bihari gave the highest rating points in Packaging, and Chirag gave the highest rating points in Hygiene.
5. Everyone rated Ravi between 5 and 7 in Behaviour. Unique maximum and minimum ratings in this parameter were given by Atal and Deepak respectively.
6. If the customers are ranked based on ratings given by them in individual parameters, then Atal's rank based on Packaging is the same as that based on Hygiene. This is also true for Deepak.

What BEST can be concluded about the tip amount given by Deepak?

A. Either ₹30 or ₹50
B. ₹50
C. Either ₹0 or ₹30 or ₹50
D. ₹30

cat2021-set2 logical-reasoning logic-puzzles

## 2.18.433 Logic Puzzles: CAT 2021 Set-2 | Data Interpretation and Logical Reasoning | Question: 9 top

6. If the customers are ranked based on ratings given by them in individual parameters, then Atal's rank based on Packaging is the same as that based on Hygiene. This is also true for Deepak.

In which parameter did Atal give the maximum rating points to Ravi?

A. Timeliness B. Behaviour C. Hygiene D. Packaging

cat2021-set2 logical-reasoning logic-puzzles

## 2.18.434 Logic Puzzles: CAT 2021 Set-3 | Data Interpretation and Logical Reasoning | Question: 10 top

10 players – P1, P2, . . . , P10 – competed in an international javelin throw event. The number (after P) of a player reflects his rank at the beginning of the event, with rank 1 going to the topmost player. There were two phases in the event with the first phase consisting of rounds 1, 2, and 3, and the second phase consisting of rounds 4, 5, and 6. A throw is measured in terms of the distance it covers (in meters, up to one decimal point accuracy), only if the throw is a 'valid' one. For an invalid throw, the distance is taken as zero. A player's score at the end of a round is the maximum distance of all his throws up to that round. Players are re-ranked after every round based on their current scores. In case of a tie in scores, the player with a prevailing higher rank retains the higher rank. This ranking determines the order in which the players go for their throws in the next round.

In each of the rounds in the first phase, the players throw in increasing order of their latest rank, i.e. the player ranked 1 at that point throws first, followed by the player ranked 2 at that point and so on. The top six players at the end of the first phase qualify for the second phase. In each of the rounds in the second phase, the players throw in decreasing order of their latest rank i.e. the player ranked 6 at that point throws first, followed by the player ranked 5 at that point and so on. The players ranked 1, 2, and 3 at the end of the sixth round receive gold, silver, and bronze medals respectively.

All the valid throws of the event were of distinct distances (as per stated measurement accuracy). The tables below show distances (in meters) covered by all valid throws in the first and the third round in the event.

Distances covered by all the valid throws in the first round

| Player | Distance (in m) |
|---|---|
| P1 | 82.9 |
| P3 | 81.5 |
| P5 | 86.4 |
| P6 | 82.5 |
| P7 | 87.2 |
| P9 | 84.1 |

Distances covered by all the valid throws in the third round

| Player | Distance (in m) |
|---|---|
| P1 | 88.6 |
| P3 | 79.0 |
| P9 | 81.4 |

The following facts are also known.

i. Among the throws in the second round, only the last two were valid. Both the throws enabled these players to qualify for the second phase, with one of them qualifying with the least score. None of these players won any medal.
ii. If a player throws first in a round AND he was also the last (among the players in the current round) to throw in the previous round, then the player is said to get a double. Two players got a double.
iii. In each round of the second phase, exactly one player improved his score. Each of these improvements was by the same amount.
iv. The gold and bronze medalists improved their scores in the fifth and sixth rounds respectively. One medal winner improved his score in the fourth round.
v. The difference between the final scores of the gold medalist and the silver medalist, as well as the difference between the final scores of the silver medalist and the bronze medalist was 1.0 m.

By how much did the gold medalist improve his score (in $m$) in the second phase?

A. 1.2 B. 1.0 C. 2.4 D. 2.0

cat2021-set3 logical-reasoning logic-puzzles

## 2.18.435 Logic Puzzles: CAT 2021 Set-3 | Data Interpretation and Logical Reasoning | Question: 17 top

Each of the bottles mentioned in this question contains 50 ml of liquid. The liquid in any bottle can be 100% pure content (P)

or can have certain amount of impurity (I). Visually it is not possible to distinguish between P and I. There is a testing device which detects impurity, as long as the percentage of impurity in the content tested is 10% or more.

For example, suppose bottle 1 contains only P, and bottle 2 contains 80% P and 20% I. If content from bottle 1 is tested, it will be found out that it contains only P. If content of bottle 2 is tested, the test will reveal that it contains some amount of I. If 10 ml of content from bottle 1 is mixed with 20 ml content from bottle 2, the test will show that the mixture has impurity, and hence we can conclude that at least one of the two bottles has I. However, if 10 ml of content from bottle 1 is mixed with 5 ml of content from bottle 2, the test will not detect any impurity in the resultant mixture.

5 ml of content from bottle A is mixed with 5 ml of content from bottle B. The resultant mixture, when tested, detects the presence of I. If it is known that bottle A contains only P, what BEST can be concluded about the volume of I in bottle B?

A. 1 ml
B. Less than 1 ml
C. 10 ml
D. 10 ml or more

cat2021-set3 logical-reasoning logic-puzzles

## 2.18.436 Logic Puzzles: CAT 2021 Set-3 | Data Interpretation and Logical Reasoning | Question: 20 top

Each of the bottles mentioned in this question contains 50 ml of liquid. The liquid in any bottle can be 100% pure content (P) or can have certain amount of impurity (I). Visually it is not possible to distinguish between P and I. There is a testing device which detects impurity, as long as the percentage of impurity in the content tested is 10% or more.

For example, suppose bottle 1 contains only P, and bottle 2 contains 80% P and 20% I. If content of bottle 1 is tested, it will be found out that it contains only P. If content of bottle 2 is tested, the test will reveal that it contains some amount of I. If 10 ml of content from bottle 1 is mixed with 20 ml content from bottle 2, the test will show that the mixture has impurity, and hence we can conclude that at least one of the two bottles has I. However, if 10 ml of content from bottle 1 is mixed with 5 ml of content from bottle 2. the test will not detect any impurity in the resultant mixture.

There are four bottles. It is known that either one or two of these bottles contain(s) only P, while remaining ones contain 85%P and 15%I. What is the minimum number of tests required to ascertain the exact number of bottles containing only P?

A. 1 B. 4 C. 2 D. 3

cat2021-set3 logical-reasoning logic-puzzles

## 2.18.437 Logic Puzzles: CAT 2021 Set-3 | Data Interpretation and Logical Reasoning | Question: 5 top

10 players – P1, P2, . . . , P10 – competed in an international javelin throw event. The number (after P) of a player reflects his rank at the beginning of the event, with rank 1 going to the topmost player. There were two phases in the event with the first phase consisting of rounds 1, 2, and 3, and the second phase consisting of rounds 4, 5, and 6. A throw is measured in terms of the distance it covers (in meters, up to one decimal point accuracy), only if the throw is a 'valid' one. For an invalid throw, the distance is taken as zero. A player's score at the end of a round is the maximum distance of all his throws up to that round. Players are re-ranked after every round based on their current scores. 10 players – $P1, P2, \ldots, P10$ – competed in an international javelin throw event. The number (after $P$) of a player reflects his rank at the beginning of the event, with rank $1$ going to the topmost player. There were two phases in the event with the first phase consisting of rounds $1, 2$, and $3$, and the second phase consisting of rounds $4, 5$, and $6$. A throw is measured in terms of the distance it covers (in meters, up to one decimal point accuracy), only if the throw is a 'valid' one. For an invalid throw, the distance is taken as zero. A player's score at the end of a round is the maximum distance of all his throws up to that round. Players are re-ranked after every round based on their current scores. In case of a tie in scores, the player with a prevailing higher rank retains the higher rank. This ranking determines the order in which the players go for their throws in the next round.

In each of the rounds in the first phase, the players throw in increasing order of their latest rank, i.e. the player ranked $1$ at that point throws first, followed by the player ranked $2$ at that point and so on. The top six players at the end of the first phase qualify for the second phase. In each of the rounds in the second phase, the players throw in decreasing order of their latest rank i.e. the player ranked $6$ at that point throws first, followed by the player ranked $5$ at that point and so on. The players ranked $1, 2$, and $3$ at the end of the sixth round receive gold, silver, and bronze medals respectively.

All the valid throws of the event were of distinct distances (as per stated measurement accuracy). The tables below show distances (in meters) covered by all valid throws in the first and the third round in the event.

Distances covered by all the valid throws in the first round

| Player | Distance (in m) |
|---|---|
| P1 | 82.9 |
| P3 | 81.5 |
| P5 | 86.4 |
| P6 | 82.5 |
| P7 | 87.2 |
| P9 | 84.1 |

Distances covered by all the valid throws in the third round

| Player | Distance (in m) |
|---|---|
| P1 | 88.6 |
| P3 | 79.0 |
| P9 | 81.4 |

The following facts are also known.

i. Among the throws in the second round, only the last two were valid. Both the throws enabled these players to qualify for the second phase, with one of them qualifying with the least score. None of these players won any medal.
ii. If a player throws first in a round AND he was also the last (among the players in the current round) to throw in the previous round, then the player is said to get a double. Two players got a double.
iii. In each round of the second phase, exactly one player improved his score. Each of these improvements was by the same amount.
iv. The gold and bronze medalists improved their scores in the fifth and sixth rounds respectively. One medal winner improved his score in the fourth round.
v. The difference between the final scores of the gold medalist and the silver medalist, as well as the difference between the final scores of the silver medalist and the bronze medalist was $1.0$ m.

What was the final score (in $m$) of the silver-medalist?

A. 88.4 B. 87.2 C. 89.6 D. 88.6

## 2.18.448 Logic Puzzles: NIELIT 2016 MAR Scientist D: 10 top

The question is based on the information provided below:

Eight fighter pilots flying over a conflict region notice some hostile activity taking place in a village. To peaceably resolve the conflict, they land their planes and decide that it would be best to send those pilots who would best complement each other as negotiators to talk to the warring parties. The pilots A, B, C, D, E, F, G, and H are chosen as negotiators according to the following conditions:

I. A is chosen if B is chosen.
II. If G is not chosen, then A and F are chosen.
III. B and H are chosen if A is chosen
IV. If F is not chosen, then G is chosen
V. If H is not chosen, then E is chosen.
VI. If C is not chosen, then D is not chosen, and if D is not chosen , then C is not chosen.

If H is not sent to negotiate, then which of the following must NOT be true?

A. F is sent to negotiate
B. E is sent to negotiate
C. B is sent to negotiate
D. G is sent to negotiate

Read the following passage carefully and choose the most appropriate option.

Five roommates Randy, Sally, Terry, Uma, and Vernon each do one housekeeping task mopping, sweeping, laundry, vacuuming, or dusting one day a week, Monday through Friday.

- Vernon does not vacuum and does not do his task on Tuesday.
- Sally does the dusting, and does not do it on Monday or Friday.
- The mopping is done on Thursday.
- Terry does his task, which is not vacuuming, on Wednesday.
- The laundry is done on Friday, and not by Uma.

- Randy does his task on Monday.

What task does Vernon do?

A. vacuuming B. dusting C. mopping D. laundry

## 2.18.467 Logic Puzzles: NIELIT 2016 MAR Scientist D: 29 top

The question is based on the information provided below:

From a group of seven people – J, K, L, M, N, P and Q – exactly four will be selected to attend a diplomat's retirement dinner. Selection must conform the following conditions:

I. Either J or K must be selected, but J and K cannot both be selected
II. Either N or P must be selected, but N and P cannot both be selected
III. N cannot be selected unless L is selected
IV. Q cannot be selected unless K is selected

Which one of the following could be the four people selected to attend the retirement dinner?

A. J, K, M, P B. J, L, N, Q C. J, M, N, Q D. K, M, P, Q

## 2.18.477 Logic Puzzles: NIELIT 2017 DEC Scientific Assistant A - Section A: 6 top

Below question presents a situation and asks you to make a judgement regarding that particular circumstance. Choose an answer based on given information.

Zineb Fez has invited her three friends over to watch the basketball game on her wide-screen television. They are all hungry, but no one wants to leave go get food. Just as they are arguing about who should make the food run, a commercial comes on for a local pizzeria that delivers. The phone number flashes on the screen briefly and they all try to remember it. By the time Zineb grabs a pen and paper, each of them recollects a different number.

1. All of the girls agree that first three numbers are 995
2. Three of them agree that the fourth number is 9.
3. Three agree that the fifth number is 2.

4. Three agree that the sixth number is $6$; three others agree that the seventh number is also $6$.

Which of the numbers is most likely the telephone number of the pizzeria?

A. $995-9266$ B. $995-9336$ C. $995-9268$ D. $995-8266$

Each question presents a situation and asks you to make a judgement regarding that particular circumstance. Choose an answer based on given information.

A Hollywood film director wants a woman for the lead role of Leez who perfectly fits the description that appears in the original screenplay. However he is not willing to consider women who do not resemble the character as she is described in the screenplay, no matter how talented they are. The screenplay describes Leez as an average-sized, forty something redhead, with deep brown eyes, very fair skin, and a brilliant smile. The casting agent has four actresses in mind.

- Actress $\#1$ is a stunning red- haired beauty who is $5'9''$ and in her mid-twenties. Her eyes are brown and she has an olive complexion.
- Actress $\#2$ has red hair, big brown eyes, and a fair complexion. She is in her mid-forties and is $5'5''$.
- Actress $\#3$ is $5'4''$ and of medium build. She has red hair, brown eyes, and in her early forties.
- Actress $\#4$ is a blue-eyed redhead in her early thirties. She's of very slight build and stands at $5'$

A. $1,2$ B. $2,3$ C. $1,4$ D. $2,4$

## 2.18.496 Logic Puzzles: NIELIT 2019 Feb Scientist C - Section A: 27 top

**Read the following information to answer the question given below.**

i. Five friends A,B,C,D and E wore shirts of green, yellow, pink, red and blue colours and shorts of black, white, grey, blue and green colours
ii. Nobody wore shirt and short of same colour.
iii. D wore blue shirt and C wore green short.
iv. The one, who wore green shirt, wore black short and the one who wore blue short, wore red shirt.
v. E did not wear red shirt.

Which colour short did $B$ wear?

A. Grey B. Blue C. White D. Black

nielit2019feb-scientistc logic-puzzles

## 2.18.503 Logic Puzzles: NIELIT 2019 Feb Scientist D - Section A: 16 top

Read the following information carefully and answer the questions given below :

i. Five students Sujit, Randhir, Neena, Mihir and Vinay have total five books on subjects Physics, Chemistry, Maths, Biology and English written by authors Gupta, Khanna, Harish, D'Souza and Edwin.Each student has only book on one of the five subjects.
ii. Gupta is the author of Physics book, which is not owned by Vinay or Sujit.
iii. Mihir owns the book written by Edwin.
iv. Neena owns Maths book. Vinay has English book, which is not written by Khanna. Biology book is written by D'Souza.

Which of the following is correct combination of subject, student and author?

A. Maths-Neena-Harish
B. Physics-Mihir-Gupta
C. English-Vinay-Edwin
D. Biology-Sujit-D'Souza

nielit2019feb-scientistd logic-puzzles

### 2.19.1 Logical Reasoning: 6 lectures are scheduled in a week starting from Monday and ending on Sunday of the same week. top

6 lectures are scheduled in a week starting from Monday and ending on Sunday of the same week. Computer Science is not on Tuesday or Saturday. Psychology is immediately after Organisational Behaviour. Statistics is not on Friday and there is one day gap between Statistics and Research Methods. One day prior to the schedule of Economics there is no lecture (as that day is the ‘off’ day) and Monday is not the ‘off’ day.

1. Which of the following is the last lecture scheduled?
1) Statistics
2) Research Methods
3) Psychology
4) Cannot be determined
5) None of these

2. IF Wednesday is the ‘off’ day, the code would be 2-4, if Thursday was the ‘off ‘ day, the code would be 3-3. Taking into account the ‘off’ day which of the following code is correct?
1) 2 - 4
2) 3 - 3
3) 4 - 2
4) Cannot be determined
5) None of these

3. Which lecture is scheduled on Friday
1) Economics
2) Psychology
3) Computer Science
4) Cannot be determined
5) None of these

4. How many lectures were scheduled between Economics and Pshychology?
1) One
2) Two
3) Three
4) Cannot be determined
5) None of these

5. Which day is Computer Science scheduled?
1) Monday
2) Wednesday
3) Thursday
4) Cannot be determined
5) None of these

logical-reasoning

Answer key

### 2.19.2 Logical Reasoning: A series of eight games, numbered G1 to G8, is organized as part of a college fest. In each game, only four players - A, B, C, D - participate and only one of them emerges as the winner. top

A series of eight games, numbered G1 to G8 R is organized as part of a college fest. In each game, only four players - A, B, C, D - participate and only one of them emerges as the winner. Five persons - P, Q, R, S, T - from among the audience took part in a contest wherein each person predicts the winner of each of the eight games in the series.

A person gets 300 for the right prediction and loses 100 for a wrong prediction. The following table gives the predictions of each of the five person as to who the winners would be. For example in game G1, R predicted player B to win, while both P and T predicted player C to win and both Q and S predicted player D to win.

At the end of eight games, it turned out that if any person had predicted that a single player would win each of the eight games, he would not have gain or lost any amount. At the end of the series of eight games, Q received the maximum amount of 1600, while T neither gained nor lost any amount. Had R made one more correct prediction and Q made one more incorrect prediction, the amounts gained by them at the end of the games would have interchanged.

1. The amount gained by P at the end of the eight games is

a. 800
b. 1200
c. 400
d. Cannot be determined.

2. How many correct predictions made by S?

a. 5
b. 3
c. 4
d. 2

3. In how many of the games was the winner not a player predicted by any of the five person?

a. 2
b. 0
c. 1
d. 3

Select the odd man out.

A. Break B. Hiatus C. Chasm D. Bridge

cat1997 logical-reasoning

## 2.19.13 Logical Reasoning: CAT 1997 | Question: 7 top

Choose that set of statements in which the third statement logically follows from the first two.

A. All mammals are viviparous. B. Bats are viviparous. C. No bat is a bird. D. No bird is a mammal. E. All bats are mammals.

A. ADC B. ABE C. FBA D. AFC

cat1997 logical-reasoning

## 2.19.14 Logical Reasoning: CAT 1997 | Question: 8 top

Choose that set of statements in which the third statement logically follows from the first two.

A. No mother is a nurse. B. Some nurses like to work. C. No woman is a prude. D. Some prude is nurses. E. Some nurses are women.

F. All women like to work.

a. ABE b. CED c. FEB d. BEF

cat1997 logical-reasoning

## 2.19.15 Logical Reasoning: CAT 1997 | Question: 9 top

Choose that set of statements in which the third statement logically follows from the first two.

A. Oranges are fruit. B. Some fruits are sour. C. Oranges are sour. D. Some oranges are sour. E. Some oranges are not sour.

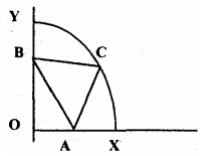
F. Some apples are sour.

A. ADB B. ACE C. BFD D. BAC

cat1997 logical-reasoning

## 2.19.16 Logical Reasoning: CAT 1998 | Question: 174 top

Read the following directions carefully and answer the questions and mark as follows: Find the length of AB? Given that $DYBC = \angle CAX = \angle YOX = 90^\circ$



1. Radius of the arc is given

2. $OA = 5$

A. If any one of the statements alone is sufficient to answer the question.
B. If both statements individually are sufficient to answer the question.
C. If both statements together are required to answer the question.
D. If both statements are not sufficient to answer the question.

cat1998 logical-reasoning

## 2.19.17 Logical Reasoning: CAT 1998 | Question: 175 top

Is n odd?

1. $n$ is divisible by $3, 5, 7$ and $9$

2. $0 < n < 400$

A. If any one of the statements alone is sufficient to answer the question.
B. If both statements individually are sufficient to answer the question.
C. If both statements together are required to answer the question.
D. If both statements are not sufficient to answer the question.

cat1998 logical-reasoning

### 2.19.18 Logical Reasoning: CAT 1998 | Question: 176 top

Read the following directions carefully and answer the questions and mark as follows:

Find $2 \bigoplus 3$, where $2 \bigoplus 3$ need not be equal to $3 \text{ AA } 2$

1.$\bigoplus 2 = 3$

2.$\bigoplus b = (a + b)/a$, where $a$ and $b$ are positive.

A. If any one of the statements alone is sufficient to answer the question.
B. If both statements individually are sufficient to answer the question.
C. If both statements together are required to answer the question.
D. If both statements are not sufficient to answer the question.

cat1998 logical-reasoning

### 2.19.19 Logical Reasoning: CAT 1998 | Question: 177 top

Read the following directions carefully and answer the questions and mark as follows:

Radha and Rani appeared in an examination. What was the total number of questions?

1. Radha & Rani together solved $20\%$ of the paper.
2. Radha alone solved $3/5$th of the paper solved by Rani.

A. If any one of the statements alone is sufficient to answer the question.
B. If both statements individually are sufficient to answer the question.
C. If both statements together are required to answer the question.
D. If both statements are not sufficient to answer the question.

cat1998 logical-reasoning

Answer key

### 2.19.20 Logical Reasoning: CAT 1998 | Question: 178 top

Read the following directions carefully and answer the questions and mark as follows:

What is the price of tea?

1. Price of coffee is Rs.$5$ more than that of tea.
2. Price of coffee is Rs.$5$ less than the price of a cold drink which cost three times the price of tea.

A. If any one of the statements alone is sufficient to answer the question.
B. If both statements individually are sufficient to answer the question.
C. If both statements together are required to answer the question.
D. If both statements are not sufficient to answer the question

cat1998 logical-reasoning

### 2.19.21 Logical Reasoning: CAT 1998 | Question: 179 top

Read the following directions carefully and answer the questions and mark as follows:

What is value of a?

1. Ratio of $a$ & $b$ is $3:5$ where $b$ is positive.
2. Ratio of $2a$ and $b$ is $12/10$ where $a$ is positive.

A. If any one of the statements alone is sufficient to answer the question.
B. If both statements individually are sufficient to answer the question.
C. If both statements together are required to answer the question.
D. If both statements are not sufficient to answer the question.

cat1998 logical-reasoning

## 2.19.22 Logical Reasoning: CAT 1998 | Question: 180 top

Read the following directions carefully and answer the questions and mark as follows:

In a group of $150$ students, find the number of girls?

1. Each girl was given $50$ paise, while, each boy was given $25$ paise to purchase goods totalling Rs. $49$
2. Girls and boys were given $30$ paisa each to buy goods totalling $45$.

A. If any one of the statements alone is sufficient to answer the question.
B. If both statements individually are sufficient to answer the question.
C. If both statements together are required to answer the question.
D. If both statements are not sufficient to answer the question.

cat1998 logical-reasoning

## 2.19.23 Logical Reasoning: CAT 1998 | Question: 181 top

Read the following directions carefully and answer the questions and mark as follows:

There are four envelopes $E_1, E_2, E_3, E_4$ in which one was supposed to put letters $L_1, L_2, L_3, L_4$ meant for person $C_1, C_2, C_3, C_4$ respectively but by mistake the letters got jumbled up and went in wrong envelopes. Now if $C_2$, is allowed to open an envelope at random, then how will he identify the envelope containing the letter for him?

1. $L_2$ has been put in $E_1$.

2. The letter belonging to $C_3$ has gone in the correct envelope.

A. If any one of the statements alone is sufficient to answer the question.
B. If both statements individually are sufficient to answer the question.
C. If both statements together are required to answer the question.
D. If both statements are not sufficient to answer the question.

cat1998 logical-reasoning

## 2.19.24 Logical Reasoning: CAT 1998 | Question: 182 top

Read the following directions carefully and answer the questions and mark as follows:

There are four racks numbered $1, 2, 3, 4$ and four books numbered $1, 2, 3, 4$. If an even rack has to contain an odd numbered book and an odd rack contains an even numbered book then what is the position of book $4$?

1. Second book has been put in third rack.
2. Third book has been put in second rack.

A. If any one of the statements alone is sufficient to answer the question.
B. If both statements individually are sufficient to answer the question.
C. If both statements together are required to answer the question.

D. If both statements are not sufficient to answer the question.

cat1998 logical-reasoning

Answer key

## 2.19.25 Logical Reasoning: CAT 1998 | Question: 183 top

Read the following directions carefully and answer the questions and mark as follows:

Find the value of $X$ in terms of $a$?

1. Arithmetic mean of $X$ and $Y$ is '$a$' while the geometric mean is also '$a$'.
2. $X/Y = R; X - Y = D$.

A. If any one of the statements alone is sufficient to answer the question.
B. If both statements individually are sufficient to answer the question.
C. If both statements together are required to answer the question.
D. If both statements are not sufficient to answer the question.

cat1998 logical-reasoning

## 2.19.26 Logical Reasoning: CAT 1998 | Question: 184 top

Read the following directions carefully and answer the questions and mark as follows:

Two concentric circles $C1$ and $C2$ with radii $r1$ and $r2$. The circles are such that $C1$ fully encloses $C2$, then what is the radius of $C1$?

1. The difference of their circumference is $k$ cm.
2. The difference of their areas is m sq. cm.

A. If any one of the statements alone is sufficient to answer the question.
B. If both statements individually are sufficient to answer the question.
C. If both statements together are required to answer the question.
D. If both statements are not sufficient to answer the question.

cat1998 logical-reasoning

## 2.19.27 Logical Reasoning: CAT 1998 | Question: 185 top

Read the following directions carefully and answer the questions and mark as follows:

A circle circumscribes a square. What is the area of the square?

1. Radius of the circle is given.
2. Length of the tangent from a point $5$-cm away from the centre of the circle is given.

A. If any one of the statements alone is sufficient to answer the question.
B. If both statements individually are sufficient to answer the question.
C. If both statements together are required to answer the question.
D. If both statements are not sufficient to answer the question.

cat1998 logical-reasoning

Answer key

## 2.19.28 Logical Reasoning: CAT 1998 | Question: 32 top

In each of the following sentences, the main statement is followed by four sentences each. Select the pair of sentences that relate logically with the given statement.

Either Mona is sick or she is careless.

A. Mona is not sick

B. Mona is not careless.

C. Mona is sick

D. Mona is careless.

A. AB B. AD C. BA D. DC

cat1998 logical-reasoning

## 2.19.29 Logical Reasoning: CAT 1998 | Question: 33 top

In each of the following sentences, the main statement is followed by four sentences each. Select the pair of sentences that relate logically with the given statement.

Ram gets a swollen nose whenever he eats hamburgers.

A. Ram gets a swollen nose. B. Ram does not eat hamburgers. C. Ram does not get a swollen nose. D. Ram eats hamburgers.

A. AB B. DC C. AC D. BC

cat1998 logical-reasoning

## 2.19.30 Logical Reasoning: CAT 1998 | Question: 34 top

In each of the following sentences, the main statement is followed by four sentences each. Select the pair of sentences that relate logically with the given statement.

Either the employees have no confidence in the management or they are hostile by nature.

A. They are hostile by nature. B. They are not hostile by nature. C. They have confidence in the management. D. They have no confidence in the management.

A. BA B. DC C. AC D. BC

cat1998 logical-reasoning

## 2.19.31 Logical Reasoning: CAT 1998 | Question: 65 top

P, Q, R, S are four statements. Relation between these statements is as follows:

If P is true then Q must be true.

If Q is true then R must be true.

If S is true then either Q is false or R is false.

Then which of the following must be true?

A. If P is true then S is false
B. If S is false then Q must be true
C. If Q is true then P must be true
D. If R is true then Q must be true

cat1998 logical-reasoning

## 2.19.32 Logical Reasoning: CAT 1998 | Question: 68 top

A, B, C, D are to be seated in a row. But C and D cannot be together. Also B cannot be at the third place.

Which of the following must be false?

A. A is at the first place
B. A is at the second place
C. A is at the third place
D. A is at the fourth place

cat1998 logical-reasoning

## 2.19.33 Logical Reasoning: CAT 1998 | Question: 69 top

A, B, C, D are to be seated in a row. But C and D cannot be together. Also B cannot be at the third place

If $A$ is not at the third place, then $C$ has which of the following option only?

A. The first place only
B. The third place only
C. The first and the third place only
D. Any of the places

cat1998 logical-reasoning

## 2.19.34 Logical Reasoning: CAT 1998 | Question: 70 top

A, B, C, D are to be seated in a row. But C and D cannot be together. Also B cannot be at the third place.

If A and B are together then which of the following must be necessarily false?

A. C is not at the first place
B. A is at the second place
C. D is at the first place
D. C is at the first place

cat1998 logical-reasoning

## 2.19.35 Logical Reasoning: CAT 1998 | Question: 76 top

Ramesh, Ram, Kareem and Mohan collected coins of different countries.

Based on the above, we can say that the number of coins collected by the boy who collected the most could not have exceeded

A. They collected 100 all together.
B. None collected less than 10.
C. Each collected an even number.
D. Each collected a different number.

A. 64 B. 2154 C. 60 D. 58

cat1998 logical-reasoning

## 2.19.36 Logical Reasoning: CAT 1998 | Question: 77 top

Ramesh, Ram, Kareem and Mohan collected coins of different countries.

If Ramesh collected 54 coins, we can say (on the basis of information obtained so far) that the difference in numbers collected by the boy who collected the most and the boy who collected the second most should he at least.

A. They collected 100 altogether.

B. None collected less than 10.

C. Each collected an even number.

D. Each collected a different number.

A. 30 B. 18 C. 26 D. 12

cat1998 logical-reasoning

## 2.19.37 Logical Reasoning: CAT 1998 | Question: 78 top

Ramesh, Ram, Kareem and Mohan collected coins of different countries.

Ramesh collected 54 coins. If Kareem collected two more than double the number collected by Mohan, the number collected by Kareem was

A. They collected 100 all together.

B. None collected less than 10.

C. Each collected an even number.

D. Each collected a different number.

A. 10 B. 30 C. 22 D. 26

cat1998 logical-reasoning

## 2.19.38 Logical Reasoning: CAT 1998 | Question: 79 top

Suppose shirts of only three colours, namely, red, blue and green are available. Further, suppose Amar does not wear a red shirt. Akbar does not wear a green shirt and Anthony does not wear a blue shirt.

If Akbar and Anthony wear shirts of the same colour then which of the following is necessarily true?

A. The colour of Amar's shirt is not blue
B. The colour of Amar's shirt is definitely blue
C. The colour of Amar's shirt is not green
D. None of the above is necessarily true

cat1998 logical-reasoning

## 2.19.39 Logical Reasoning: CAT 1998 | Question: 80 top

Suppose shirts of only three colours, namely, red, blue and green are available. Further, suppose Amar does not wear a red shirt. Akbar does not wear a green shirt and Anthony does not wear a blue shirt.

If any two of them wear shirts of the same colour then how many of the following statements are definitely false?

A. The colour of Anthony's shirt is red and that of Akbar's shirt is green.

B. The colour of Anthony's shirt is red and that of Amar's shirt is blue.

C. The colour of Akbar's shirt is blue and that of Anthony's shirt is red.

D. The colour of Amar's shirt is blue and that of Akbar's shirt is red.

A. 0 B. 2 C. 1 D. 3

cat1998 logical-reasoning

## 2.19.40 Logical Reasoning: CAT 1998 | Question: 87 top

Kamal Babu came home just after judging a beauty contest where there were four semi-finalists, Ms. Andhra Pradesh, Ms. Uttar Pradesh, Ms. Maharashtra and Ms. West Bengal. His wife was very keen on knowing who the winner was and Kamal Babu replied immediately that it was the one wearing the yellow saree. When his wife asked for more details, he gave the following information:

- The four girls were wearing sarees of different colours (yellow, red green, white) and the runner- up was wearing green.
- The four girls were sitting in a row, and Ms. West Bengal was not sitting at either end.
- There was only one runner-up and she was sitting next to Ms. Maharashtra.
- The girls wearing yellow and white sarees occupied the seats at either end.
- Ms. West Bengal was neither the winner nor the runner-up.
- Ms. Maharashtra was wearing white.
- The winner and the runner-up were not sitting next to each other.
- The girls wearing the green saree was not Ms. Andhra Pradesh.

Answer the following questions based on the above information:

What was the colour of the saree that Ms. Andhra Pradesh was wearing?

A. White
B. Yellow
C. Red
D. Cannot be determined

cat1998 logical-reasoning

## 2.19.41 Logical Reasoning: CAT 1998 | Question: 88 top

Kamal Babu came home just after judging a beauty contest where there were four semi-finalists, Ms. Andhra Pradesh, Ms. Uttar Pradesh, Ms. Maharashtra and Ms. West Bengal. His wife was very keen on knowing who the winner was and Kamal Babu replied immediately that it was the one wearing the yellow saree. When his wife asked for more details, he gave the following information:

- The four girls were wearing sarees of different colours (yellow, red green, white) and the runner- up was wearing green.
- The four girls were sitting in a row, and Ms. West Bengal was not sitting at either end.
- There was only one runner-up and she was sitting next to Ms. Maharashtra.
- The girls wearing yellow and white sarees occupied the seats at either end.
- Ms. West Bengal was neither the winner nor the runner-up.
- Ms. Maharashtra was wearing white.
- The winner and the runner-up were not sitting next to each other.
- The girls wearing the green saree was not Ms. Andhra Pradesh.

Answer the following questions based on the above information:

Between which two was Ms. West Bengal sitting?

A. Ms. Andhra Pradesh and Ms. Maharashtra
B. Ms. Andhra Pradesh and Ms. Uttar Pradesh
C. Ms. Ut tar Pradesh and Maharashtra
D. Cannot be uniquely determined

cat1998 logical-reasoning

## 2.19.42 Logical Reasoning: CAT 1998 | Question: 89 top

Kamal Babu came home just after judging a beauty contest where there were four semi-finalists, Ms. Andhra Pradesh, Ms.

Uttar Pradesh, Ms. Maharashtra and Ms. West Bengal. His wife was very keen on knowing who the winner was and Kamal Babu replied immediately that it was the one wearing the yellow saree. When his wife asked for more details, he gave the following information:

The four girls were wearing sarees of different colours (yellow, red green, white) and the runner- up was wearing green.

- The four girls were sitting in a row, and Ms. West Bengal was not sitting at either end.
- There was only one runner-up and she was sitting next to Ms. Maharashtra.
- The girls wearing yellow and white sarees occupied the seats at either end.
- Ms. West Bengal was neither the winner nor the runner-up.
- Ms. Maharashtra was wearing white.
- The winner and the runner-up were not sitting next to each other.
- The girls wearing the green saree was not Ms. Andhra Pradesh.

Answer the following questions based on the above information:

Who was wearing the red saree?

A. Ms. Andhra Pradesh
B. Ms. Uttar Pradesh
C. Ms. West Bengal
D. Cannot be uniquely determined

cat1998 logical-reasoning

## 2.19.43 Logical Reasoning: CAT 1998 | Question: 90 top

Kamal Babu came home just after judging a beauty contest where there were four semi-finalists, Ms. Andhra Pradesh, Ms. Uttar Pradesh, Ms. Maharashtra and Ms. West Bengal. His wife was very keen on knowing who the winner was and Kamal Babu replied immediately that it was the one wearing the yellow saree. When his wife asked for more details, he gave the following information:

- The four girls were wearing sarees of different colours (yellow, red green, white) and the runner- up was wearing green.
- The four girls were sitting in a row, and Ms. West Bengal was not sitting at either end.
- There was only one runner-up and she was sitting next to Ms. Maharashtra.
- The girls wearing yellow and white sarees occupied the seats at either end.
- Ms. West Bengal was neither the winner nor the runner-up.
- Ms. Maharashtra was wearing white.
- The winner and the runner-up were not sitting next to each other.
- The girls wearing the green saree was not Ms. Andhra Pradesh.

Answer the following questions based on the above information:

What was the colour of the saree that Ms. Uttar Pradesh was wearing?

A. White
B. Green
C. Red
D. Yellow

cat1998 logical-reasoning

## 2.19.44 Logical Reasoning: CAT 1998 | Question: 95 top

$A, B, C, D, \ldots\ldots\ldots, X, Y, Z$ are the players who participated in a tournament. Everyone played with every other player exactly once. $A$ win scores $2$ points, a draw scores $1$ point and a lose scores $0$ points. None of the matches ended in a draw. No two players scored the same score. At the end of the tournament, the ranking list is published which is in accordance with the alphabetical order. Then.

A. $M$ wins over $N$
B. $N$ wins over $M$
C. $M$ does not play with $N$
D. None of these

cat1998 logical-reasoning

## 2.19.45 Logical Reasoning: CAT 1999 | Question: 101 top

**Answer the question based on the following information.**
A robot moves on a graph sheet with X and Y-axis. The robot is moved by feeding it with a sequence of instructions. The different instructions that can be used in moving it, and their meanings are:

| Instruction | Meaning |
|---|---|
| GOTO (x,y) | Move to point with coordinates (x, y) no matter where you are currently. |

| | |
|---|---|
| WALKX(p) | Move parallel to the X-axis through a distance of p, in the positive direction if p is positive, and in the negative direction if p is negative. |
| WALKY(p) | Move parallel to the Y-axis through a distance of p, in the positive direction if p is positive, and in the negative direction if p is negative. |

The robot reaches point $(6, 6)$ when a sequence of three instructions is executed, the first of which is a GOTO(x,y) instruction, the second is WALKX$(2)$ and the third is WALKY $(4)$. What are the value of x and y?

A. $2, 4$ B. $0, 0$ C. $4, 2$ D. $2, 2$

cat1999 logical-reasoning

Answer key

## 2.19.46 Logical Reasoning: CAT 1999 | Question: 102 top

**Answer the question based on the following information.**

A robot moves on a graph sheet with X and Y-axis. The robot is moved by feeding it with a sequence of instructions. The different instructions that can be used in moving it, and their meanings are:

| Instruction | Meaning |
|---|---|
| GOTO(x,y) | Move to point with coordinates (x, y) no matter where you are currently |
| WALKX(p) | Move parallel to the X-axis through a distance of p, in the positive direction if p is positive, and in the negative direction if p is negative. |
| WALKY(p) | Move parallel to the Y-axis through a distance of p, in the positive direction if p is positive, and in the negative direction if p is negative. |

The robot is initially at $(x, y), x > 0$ and $y < 0$. The minimum number of instructions needed to be executed to bring it to the origin $(0, 0)$ if you are prohibited from using the GOTO instruction is

A. 2 B. 1 C. x+y D. 0

cat1999 logical-reasoning

Answer key

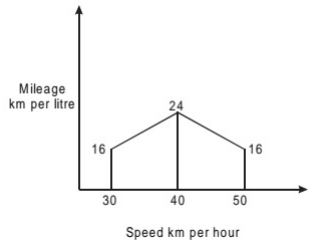
## 2.19.50 Logical Reasoning: CAT 1999 | Question: 106 top

**Answer the question based on the following information.**

Rajiv reaches city B from city A in $4$ hours, driving at speed of $35$ kmph for the first two hour and at $45$ kmph for the next two hours. Aditi follows the same route, but drives at three different speeds: $30, 40$ and $50$ kmph, covering an equal distance in each speed segment. The two cars are similar with petrol consumption characteristics (km per litre) shown in the figure below.



The quantity of petrol consumed by Aditi for the journey is

A. 8.3 l B. 8.6 l C. 8.9 l D. 9.2 l

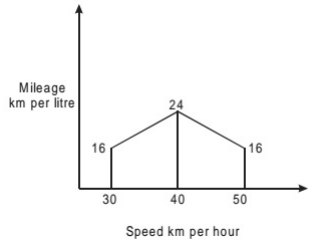
logical-reasoning cat1999

Answer key

## 2.19.51 Logical Reasoning: CAT 1999 | Question: 107 top

**Answer the question based on the following information.**

Rajiv reaches city B from city A in 4 hours, driving at speed of 35 kmph for the first two hour and at 45 kmph for the next two hours. Aditi follows the same route, but drives at three different speeds: 30, 40 and 50 kmph, covering an equal distance in each speed segment. The two cars are similar with petrol consumption characteristics (km per litre) shown in the figure below.



Zoheb would like to drive Aditi's car over the same route from A to B and minimize the petrol consumption for the trip. What is the quantity of petrol required by him?

A. 6.67 litre B. 7 litre C. 6.33 litre D. 6.0 litre

logical-reasoning cat1999

Answer key

## 2.19.52 Logical Reasoning: CAT 1999 | Question: 108 top

**Answer the question based on the following information.**

Recently, Ghosh Babu spent his winter vacation on Kyakya Island. During the vacation, he visited the local casino where he came across a new card game. Two players, using a normal deck of 52 playing cards, play this game. One player is called the 'dealer' and the other is called the 'player'. First, the player picks a card at random from the deck. This is called the base card. The amount in rupees equal to the face value of the base card is called the base amount. The face values of ace, king, queen and jack are ten. For other cards the face value is the number on the card. Once the 'player' picks a card from the deck, the 'dealer' pays him the base amount. Then the 'dealer' picks a card from the deck and this card is called the top card. If the top card is of the same suit as the base card, the 'player' pays twice the base amount to the 'dealer'. If the top card is of the same colour as the base card (but not the same suit), then the 'player' pays the base amount to the 'dealer'. If the top card happens to be of a different colour than the base card, the 'dealer' pays the base amount to the 'player'.

Ghosh Babu played the game four times. First time he picked eight of clubs and the 'dealer' picked queen of clubs. Second time, he picked ten of hearts and the 'dealer' picked two of spades. Next time, Ghosh Babu picked six of diamonds and the 'dealer' picked ace of hearts. Lastly, he picked eight of spades and the 'dealer' picked jack of spades. Answer the following question based on these four games.

If Ghosh Babu stopped playing the game when his gain would be maximized, the gain in Rs. would have been

A. 12 B. 20 C. 16 D. 4

logical-reasoning cat1999

Answer key

## 2.19.53 Logical Reasoning: CAT 1999 | Question: 109 top

**Answer the question based on the following information.**

Recently, Ghosh Babu spent his winter vacation on Kyakya Island. During the vacation, he visited the local casino where he came across a new card game. Two players, using a normal deck of 52 playing cards, play this game. One player is called the 'dealer' and the other is called the 'player'. First, the player picks a card at random from the deck. Answer key

## 2.19.67 Logical Reasoning: CAT 1999 | Question: 123 top

**The question has a main statement followed by four statements labelled A, B, C and D. Choose the ordered pair of statements where the first statement implies the second, and the two statements are logically consistent with the main statement.**

Whenever Rajeev uses the Internet, he dreams about spiders.

A. Rajeev did not dream about spiders. B. Rajeev used the Internet. C. Rajeev dreamt about spiders. D. Rajeev did not use the Internet.

1. A, D
2. D, C
3. C, B
4. D, A

logical-reasoning cat1999

Answer key

## 2.19.68 Logical Reasoning: CAT 1999 | Question: 124 top

**The question has a main statement followed by four statements labelled A, B, C and D. Choose the ordered pair of statements where the first statement implies the second, and the two statements are logically consistent with the main statement.**

If I talk to my professors, then I do not need to take a pill for headache.

A. I talked to my professors B. I did not need to take a pill for headache C. I did not need to take a pill for headache D. I talked to my professors.

1. A and B only 2. B and C only 3. C and D only 4. A and B only

logical-reasoning cat1999

Answer key

## 2.19.69 Logical Reasoning: CAT 1999 | Question: 125 top

**The question has a set of four statements. Each statement has three segments. Choose the alternative where the third segment in the statement can be logically deduced using both the preceding two, but not just from one of them.**

A. No cowboys laugh. Some women laugh. Some women are cowboys. B. All laughs are phonies. Some laughs are annoying. Some annoying things are phonies. C. Some people are liars. All liars are crazy. Some crazy people are liars. D. All crazy people are weird. All weird people are liars. All crazy people are liars.

1. A and C only 2. B and C only 3. A and D only 4. B and D only

logical-reasoning cat1999

Answer key

## 2.19.70 Logical Reasoning: CAT 1999 | Question: 126 top

**The question has a set of four statements. Each statement has three segments. Choose the alternative where the third segment in the statement can be logically deduced using both the preceding two, but not just from one of them.**

A. All good people are knights. All knights are good people. All good people are knights. B. All warriors are good people. All good people are knights. All warriors are knights. C. Some knights are warriors. Some warriors are sloth bears. Some knights are sloth bears. D. Some knights are warriors. All warriors are good people. Some knights are good people.

1. C and D only 2. B and D only 3. A and C only 4. C only

## 2.19.77 Logical Reasoning: CAT 1999 | Question: 133 top

**The question has a set of four statements. Each statement has three segments. Choose the alternative where the third segment in the statement can be logically deduced using both the preceding two, but not just from one of them.**

A. Many singers are not writers. All poets are singers. Some poets are not writers. B. Giants are strong. All poets are singers. Some poets are not strong. C. All poets are singers. Some poets are not writers. Some singers are not writers. D. Some poets are not writers. Some writers are not singers. Some singers are not writers.

1. A only 2. B only 3. C only 4. A and D 5. C only

logical-reasoning cat1999

Answer key

## 2.19.78 Logical Reasoning: CAT 1999 | Question: 134 top

**The question has a set of four statements. Each statement has three segments. Choose the alternative where the third segment in the statement can be logically deduced using both the preceding two, but not just from one of them.**

A. A few farmers are rocket scientists. Some rocket scientists are not honest. Some farmers are not honest. B. Florists are honest. Some florists are not rich. Some rich persons are not honest. C. No snake is a polar bear. Some snakes are not dangerous. All dangerous animals are polar bears. D. All polar bears are dangerous. All dangerous animals are polar bears. All polar bears are dangerous.

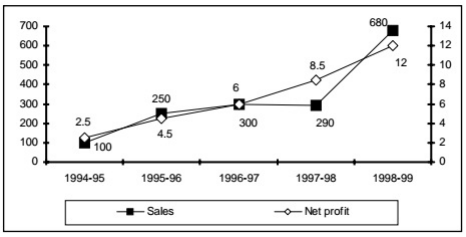
1. B only 2. A and C 3. A and B 4. C only 5. C and D

logical-reasoning cat1999

## 2.19.79 Logical Reasoning: CAT 1999 | Question: 135 top

**Answer the question based on the following information.**

The figure below represents sales and net profit in Rs. crore of IVP Ltd. for five years from $1994-95$ to $1998-99$. During this period the sales increased from Rs. 100 crore to Rs. 680 crore. Correspondingly, the net profit increased from Rs. 2.5 crore to Rs. 12 crore. Net profit is defined as the excess of sales over total costs.



The highest percentage of growth in sales, relative to the previous year, occurred in

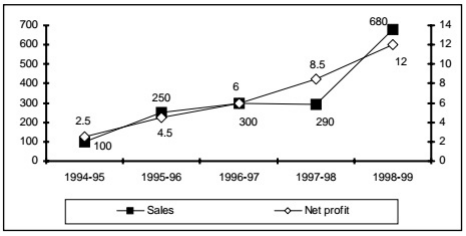
A. $1995-96$ B. $1996-97$ C. $1997-98$ D. $1998-99$

logical-reasoning cat1999

## 2.19.80 Logical Reasoning: CAT 1999 | Question: 136 top

**Answer the question based on the following information.**

The figure below represents sales and net profit in Rs. crore of IVP Ltd. for five years from $1994-95$ to $1998-99$. During this period the sales increased from Rs. 100 crore to Rs. 680 crore. Correspondingly, the net profit increased from Rs. 2.5 crore to Rs. 12 crore. Net profit is defined as the excess of sales over total costs.



The highest percentage growth in net profit, relative to the previous year, was achieved in

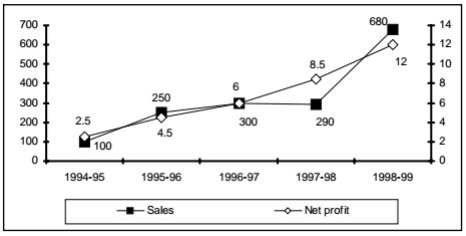
A. $1998-99$ B. $1997-98$ C. $1996-97$ D. $1995-96$

logical-reasoning cat1999

## 2.19.81 Logical Reasoning: CAT 1999 | Question: 137 top

**Answer the question based on the following information.**

The figure below represents sales and net profit in Rs. crore of IVP Ltd. for five years from $1994-95$ to $1998-99$. During this period the sales increased from Rs. 100 crore to Rs. 680 crore. Correspondingly, the net profit increased from Rs. 2.5 crore to Rs. 12 crore. Net profit is defined as the excess of sales over total costs.



Defining profitability as the ratio of net profit to sales, IVP Ltd., recorded the highest profitability in

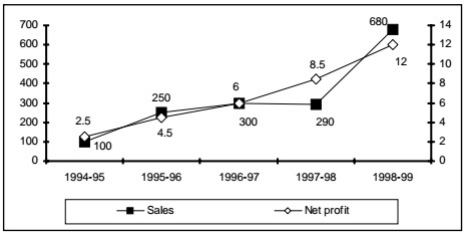
A. $1998-99$ B. $1997-98$ C. $1994-95$ D. $1996-97$

logical-reasoning cat1999

## 2.19.82 Logical Reasoning: CAT 1999 | Question: 138 top

**Answer the question based on the following information.**

The figure below represents sales and net profit in Rs. crore of IVP Ltd. for five years from $1994-95$ to $1998-99$. During this period the sales increased from Rs. 100 crore to Rs. 680 crore. Correspondingly, the net profit increased from Rs. 2.5 crore to Rs. 12 crore. Net profit is defined as the excess of sales over total costs.



With profitability as defined in question $137$, it can be concluded that

A. profitability is non-decreasing during the five years from $1994-95$ to $1998-99$.
B. profitability is non-increasing during the five years from $1994-95$ to $1998-99$.
C. profitability remained constant during the five years from $1994-95$ to $1998-99$.
D. None of the above

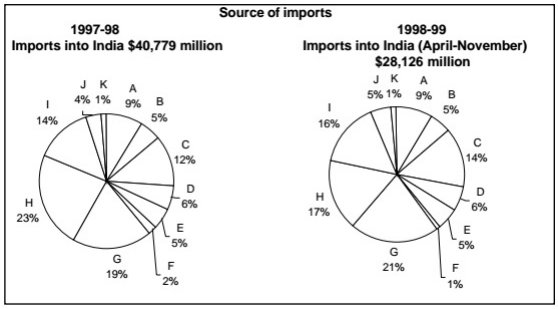
logical-reasoning cat1999

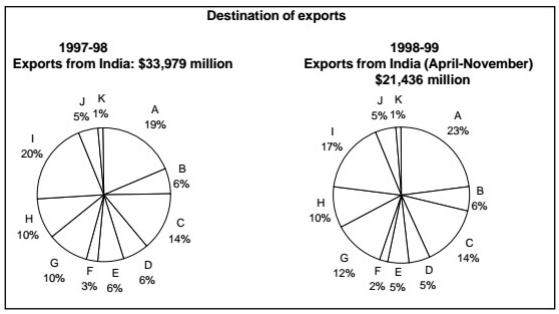
## 2.19.83 Logical Reasoning: CAT 1999 | Question: 139 top

**Answer the question based on the following information**

Consider the information provided in the figure below relating to India's foreign trade in $1997-98$ and the first eight months of $1998-99$. Total trade with a region is defined as the sum of exports and imports from that region. Trade deficit is defined as the excess of imports over exports. Trade deficit may be negative.

A. USA B. Germany C. Other EU D. UK E. Japan
F. Other East European countries G. OPEC H. Asia I. Other LDCs J. Others
K. Russia





What is the region with which India had the highest total trade in $1997-98$?

A. USA B. Other EU countries C. OPEC D. Others

logical-reasoning cat1999

## 2.19.84 Logical Reasoning: CAT 1999 | Question: 140 top

**Answer the question based on the following information**

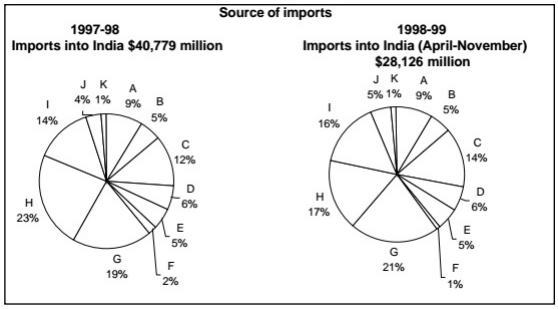
Consider the information provided in the figure below relating to India's foreign trade in $1997-98$ and the first eight months

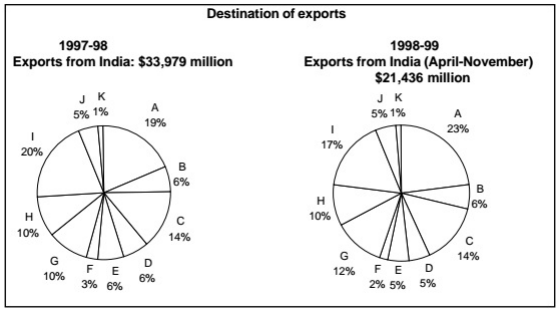
of $1998-99$. Total trade with a region is defined as the sum of exports and imports from that region. Trade deficit is defined as the excess of imports over exports. Trade deficit may be negative.

A. USA B. Germany C. Other EU D. UK E. Japan

F. Other East European countries G. OPEC H. Asia I. Other LDCs J. Others

K. Russia





In $1997-98$ the amount of Indian exports, million US dollars, to the region with which India had the lowest total trade, is approximately

A. 750 B. 340 C. 220 D. 440

logical-reasoning cat1999

## 2.19.85 Logical Reasoning: CAT 1999 | Question: 141 top

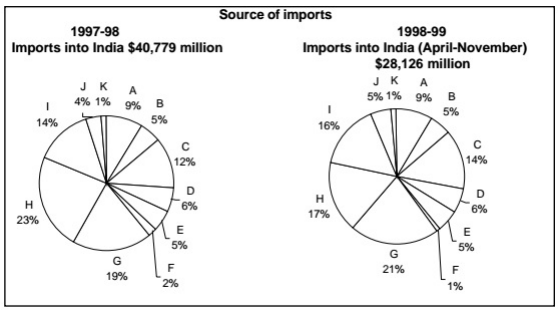
**Answer the question based on the following information**

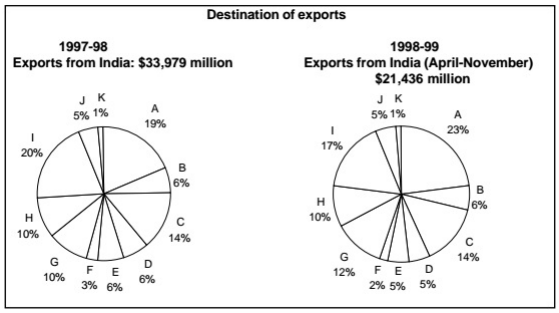
Consider the information provided in the figure below relating to India's foreign trade in $1997-98$ and the first eight months of $1998-99$. Total trade with a region is defined as the sum of exports and imports from that region. Trade deficit is defined as the excess of imports over exports. Trade deficit may be negative.

A. USA B. Germany C. Other EU D. UK E. Japan

F. Other East European countries G. OPEC H. Asia I. Other LDCs J. Others

K. Russia





In $1997-98$, the trade deficit with respect to India, billion US dollars, for the region with the highest trade deficit with respect to India, is approximately equal to

A. 6.0 B. 3.0 C. 4.5 D. 7.5

logical-reasoning cat1999

## 2.19.86 Logical Reasoning: CAT 1999 | Question: 142 top

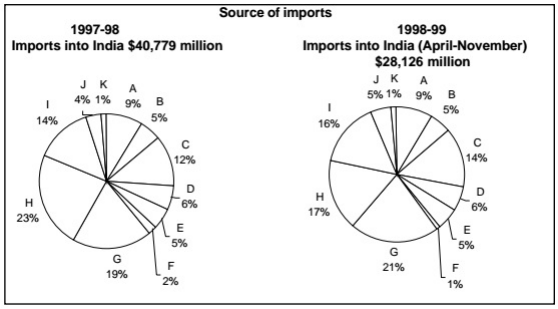
**Answer the question based on the following information**

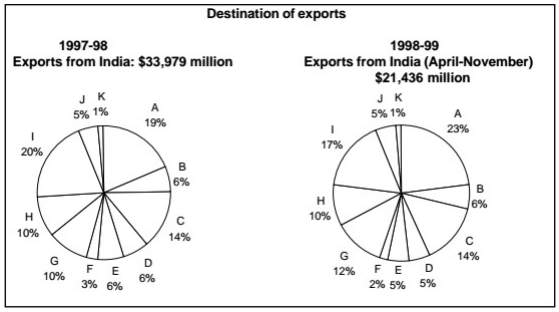
Consider the information provided in the figure below relating to India's foreign trade in $1997-98$ and the first eight months of $1998-99$. Total trade with a region is defined as the sum of exports and imports from that region. Trade deficit is defined as the excess of imports over exports. Trade deficit may be negative.

A. USA B. Germany C. Other EU D. UK E. Japan

F. Other East European countries G. OPEC H. Asia I. Other LDCs J. Others

K. Russia





What is the region with the lowest trade deficit with India in $1997-98$?

A. USA B. Asia C. Others D. Other EU countries

logical-reasoning cat1999

## 2.19.87 Logical Reasoning: CAT 1999 | Question: 143 top

**Answer the question based on the following information.**

Assume that the average monthly exports from India and imports to India during the remaining four months of $1998-99$ would be the same as that for the first eight months of the year.

What is the region to which India's exports registered the highest percentage growth between $1997-98$ and $1998-99$?

A. Other East European countries B. USA

C. Asia

D. Exports have declined, no growth

logical-reasoning cat1999

## 2.19.88 Logical Reasoning: CAT 1999 | Question: 144 top

**Answer the question based on the following information.**

Assume that the average monthly exports from India and imports to India during the remaining four months of $1998-99$ would be the same as that for the first eight months of the year.

What is the percentage growth rate in India's total trade deficit between $1997-98$ and $1998-99$?

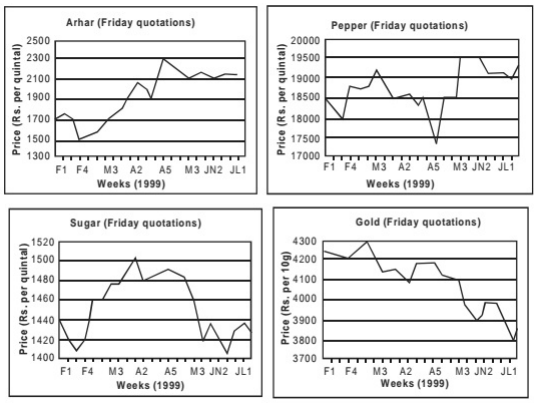
A. 43 B. 47 C. 50 D. 40

logical-reasoning cat1999

## 2.19.89 Logical Reasoning: CAT 1999 | Question: 145 top

**Answer the question based on the following information.**

These questions are based on the price fluctuations of four commodities — arhar, pepper, sugar and gold during February-July 1999 as described in the figures below.



Price change of a commodity is defined as the absolute difference in ending and beginning prices expressed as a percentage of the beginning. What is the commodity with the highest price change?

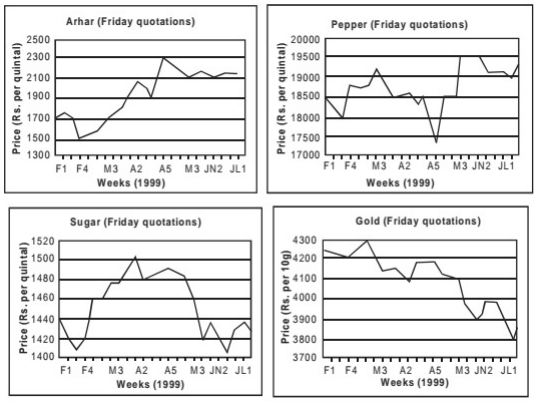
A. Arhar B. Pepper C. Sugar D. Gold

logical-reasoning cat1999

## 2.19.90 Logical Reasoning: CAT 1999 | Question: 146 top

**Answer the question based on the following information.**

These questions are based on the price fluctuations of four commodities — arhar, pepper, sugar and gold during February-July 1999 as described in the figures below.



Price volatility (PV) of a commodity is defined as follows:

PV = (Highest price during the period – Lowest price during the period)/Average price during the period. What is the commodity with the lowest price volatility?

A. Arhar B. Pepper C. Sugar D. Gold

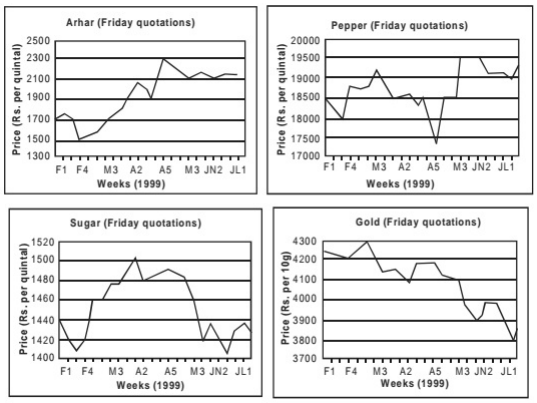
logical-reasoning cat1999

Answer key

## 2.19.91 Logical Reasoning: CAT 1999 | Question: 147 top

**Answer the question based on the following information.**

These questions are based on the price fluctuations of four commodities — arhar, pepper, sugar and gold during February-July 1999 as described in the figures below.



Mr X, a fund manager with an investment company invested 25% of his funds in each of the four commodities at the beginning of the period. He sold the commodities at the end of the period. His investments in the commodities resulted in

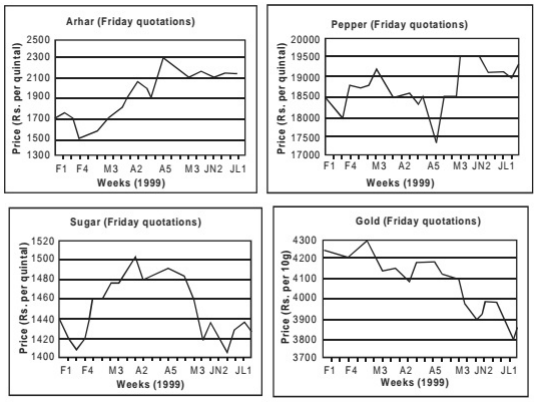
A. 17% profit
B. 5.5% loss
C. No profit, no loss
D. 5.4% profit

logical-reasoning cat1999

## 2.19.92 Logical Reasoning: CAT 1999 | Question: 148 top

**Answer the question based on the following information.**

These questions are based on the price fluctuations of four commodities — arhar, pepper, sugar and gold during February-July 1999 as described in the figures below.



The price volatility(PV) of the commodity with the highest PV during the February-July period is approximately equal to

A. 3%
B. 40%
C. 20%
D. 12%

logical-reasoning cat1999

## 2.19.93 Logical Reasoning: CAT 1999 | Question: 149 top

**Answer the question based on the following information.**

The table below presents data on percentage population covered by drinking water and sanitation facilities in selected Asian countries.

| | Drinking water | | | Sanitation facility | | |
|---|---|---|---|---|---|---|
| | Urban | Rural | Total | Urban | Rural | Total |
| **India** | 85 | 79 | 81 | 70 | 14 | 29 |

| | | | | | | |
|---|---|---|---|---|---|---|
| Bangladesh | 99 | 96 | 97 | 79 | 44 | 48 |
| China | 97 | 56 | 67 | 74 | 7 | 24 |
| Pakistan | 82 | 69 | 74 | 77 | 22 | 47 |
| Philippines | 92 | 80 | 86 | 88 | 66 | 77 |
| Indinesia | 79 | 54 | 62 | 73 | 40 | 51 |
| Sri Lanka | 88 | 52 | 57 | 68 | 62 | 63 |
| Nepal | 88 | 60 | 63 | 58 | 12 | 1 |

Country A is said to dominate B or A > B if A has higher percentage in total coverage for both drinking water and sanitation facilities, and, B is said to be dominated by A, or B < A.

A country is said to be on the coverage frontier if no other country dominates it. Similarly, a country is not on the coverage frontier if it is dominated by at least one other country.

Which countries are the countries on the coverage frontier?

A. India and China
B. Sri Lanka and Indonesia
C. Philippines and Bangladesh
D. Nepal and Pakistan

logical-reasoning cat1999

Answer key

## 2.19.94 Logical Reasoning: CAT 1999 | Question: 150 top

**Answer the question based on the following information.**

The table below presents data on percentage population covered by drinking water and sanitation facilities in selected Asian countries.

| | Drinking water | | | Sanitation facility | | |
|---|---|---|---|---|---|---|
| | Urban | Rural | Total | Urban | Rural | Total |
| **India** | 85 | 79 | 81 | 70 | 14 | 29 |
| Bangladesh | 99 | 96 | 97 | 79 | 44 | 48 |
| China | 97 | 56 | 67 | 74 | 7 | 24 |
| Pakistan | 82 | 69 | 74 | 77 | 22 | 47 |
| Philippines | 92 | 80 | 86 | 88 | 66 | 77 |
| Indinesia | 79 | 54 | 62 | 73 | 40 | 51 |
| Sri Lanka | 88 | 52 | 57 | 68 | 62 | 63 |
| Nepal | 88 | 60 | 63 | 58 | 12 | 1 |

Country A is said to dominate B or A > B if A has higher percentage in total coverage for both drinking water and sanitation facilities, and, B is said to be dominated by A, or B < A.

A country is said to be on the coverage frontier if no other country dominates it. Similarly, a country is not on the coverage frontier if it is dominated by at least one other country.

Which of the following statements are true?

A. India > Pakistan and India > Indonesia
B. India > China and India > Nepal
C. Sri Lanka > China
D. China > Nepal

1. A and B
2. A and C
3. B and C
4. B and D
5. C and D

logical-reasoning cat1999

## 2.19.95 Logical Reasoning: CAT 1999 | Question: 151 top

**Answer the question based on the following information.**

The table below presents data on percentage population covered by drinking water and sanitation facilities in selected Asian countries.

| | Drinking water | Sanitation facility |
|---|---|---|
| | | |

| | Urban | Rural | Total | Urban | Rural | Total |
|---|---|---|---|---|---|---|
| **India** | 85 | 79 | 81 | 70 | 14 | 29 |
| Bangladesh | 99 | 96 | 97 | 79 | 44 | 48 |
| China | 97 | 56 | 67 | 74 | 7 | 24 |
| Pakistan | 82 | 69 | 74 | 77 | 22 | 47 |
| Philippines | 92 | 80 | 86 | 88 | 66 | 77 |
| Indinesia | 79 | 54 | 62 | 73 | 40 | 51 |
| Sri Lanka | 88 | 52 | 57 | 68 | 62 | 63 |
| Nepal | 88 | 60 | 63 | 58 | 12 | 1 |

Country A is said to dominate B or A > B if A has higher percentage in total coverage for both drinking water and sanitation facilities, and, B is said to be dominated by A, or B < A.

A country is said to be on the coverage frontier if no other country dominates it. Similarly, a country is not on the coverage frontier if it is dominated by at least one other country.

Using only the data presented under 'sanitation facilities' columns, it can be concluded that rural population in India, as a percentage of its total population is approximately

A. 76
B. 70
C. 73
D. Cannot be determined

logical-reasoning cat1999

Answer key

## 2.19.96 Logical Reasoning: CAT 1999 | Question: 152 top

**Answer the question based on the following information.**

The table below presents data on percentage population covered by drinking water and sanitation facilities in selected Asian countries.

| | Drinking water | | | Sanitation facility | | |
|---|---|---|---|---|---|---|
| | Urban | Rural | Total | Urban | Rural | Total |
| **India** | 85 | 79 | 81 | 70 | 14 | 29 |
| Bangladesh | 99 | 96 | 97 | 79 | 44 | 48 |
| China | 97 | 56 | 67 | 74 | 7 | 24 |
| Pakistan | 82 | 69 | 74 | 77 | 22 | 47 |
| Philippines | 92 | 80 | 86 | 88 | 66 | 77 |
| Indinesia | 79 | 54 | 62 | 73 | 40 | 51 |
| Sri Lanka | 88 | 52 | 57 | 68 | 62 | 63 |
| Nepal | 88 | 60 | 63 | 58 | 12 | 1 |

Country A is said to dominate B or A > B if A has higher percentage in total coverage for both drinking water and sanitation facilities, and, B is said to be dominated by A, or B < A.

A country is said to be on the coverage frontier if no other country dominates it. Similarly, a country is not on the coverage frontier if it is dominated by at least one other country.

Using only the data presented under 'sanitation facilities' columns, sequence China, Indonesia and Philippines in ascending order of rural population as a percentage of their respective total population. The correct order is

A. Philippines, Indonesia, China
B. Indonesia, China, Philippines
C. Indonesia, Philippines, China
D. China, Indonesia, Philippines

logical-reasoning cat1999

## 2.19.97 Logical Reasoning: CAT 1999 | Question: 153 top

**Answer the question based on the following information.**

The table below presents data on percentage population covered by drinking water and sanitation facilities in selected Asian countries.

| | Drinking water | | | Sanitation facility | | |
|---|---|---|---|---|---|---|
| | Urban | Rural | Total | Urban | Rural | Total |
| **India** | 85 | 79 | 81 | 70 | 14 | 29 |
| Bangladesh | 99 | 96 | 97 | 79 | 44 | 48 |
| China | 97 | 56 | 67 | 74 | 7 | 24 |
| Pakistan | 82 | 69 | 74 | 77 | 22 | 47 |
| Philippines | 92 | 80 | 86 | 88 | 66 | 77 |
| Indinesia | 79 | 54 | 62 | 73 | 40 | 51 |
| Sri Lanka | 88 | 52 | 57 | 68 | 62 | 63 |
| Nepal | 88 | 60 | 63 | 58 | 12 | 1 |

Country A is said to dominate B or A > B if A has higher percentage in total coverage for both drinking water and sanitation facilities, and, B is said to be dominated by A, or B < A.

A country is said to be on the coverage frontier if no other country dominates it. Similarly, a country is not on the coverage frontier if it is dominated by at least one other country.

India is not on the coverage frontier because

A. it is lower than Bangladesh in terms of both drinking water and sanitation facilities.

1. A and B C None of these

logical-reasoning cat1999

Answer key

## 2.19.98 Logical Reasoning: CAT 1999 | Question: 154 top

**Answer the question based on the following information.**

The table below presents data on percentage population covered by drinking water and sanitation facilities in selected Asian countries.

| | Drinking water | | | Sanitation facility | | |
|---|---|---|---|---|---|---|
| | Urban | Rural | Total | Urban | Rural | Total |
| **India** | 85 | 79 | 81 | 70 | 14 | 29 |
| Bangladesh | 99 | 96 | 97 | 79 | 44 | 48 |
| China | 97 | 56 | 67 | 74 | 7 | 24 |
| Pakistan | 82 | 69 | 74 | 77 | 22 | 47 |
| Philippines | 92 | 80 | 86 | 88 | 66 | 77 |
| Indinesia | 79 | 54 | 62 | 73 | 40 | 51 |
| Sri Lanka | 88 | 52 | 57 | 68 | 62 | 63 |
| Nepal | 88 | 60 | 63 | 58 | 12 | 1 |

Country A is said to dominate B or A > B if A has higher percentage in total coverage for both drinking water and sanitation facilities, and, B is said to be dominated by A, or B < A.

A country is said to be on the coverage frontier if no other country dominates it. Similarly, a country is not on the coverage frontier if it is dominated by at least one other country.

These relate to the above table with the additional provison that the gap between the population coverages of ‘sanitation facilities’ and ‘drinking water facilities’ is a measure of disparity in coverage.

The country with the most disparity in coverage of rural sector is

A. India B. Bangladesh C. Nepal D. None of these

logical-reasoning cat1999

Answer key

## 2.19.99 Logical Reasoning: CAT 1999 | Question: 155 top

**Answer the question based on the following information.**

The table below presents data on percentage population covered by drinking water and sanitation facilities in selected Asian countries.

| | Drinking water | | | Sanitation facility | | |
|---|---|---|---|---|---|---|
| | Urban | Rural | Total | Urban | Rural | Total |
| **India** | 85 | 79 | 81 | 70 | 14 | 29 |
| Bangladesh | 99 | 96 | 97 | 79 | 44 | 48 |
| China | 97 | 56 | 67 | 74 | 7 | 24 |
| Pakistan | 82 | 69 | 74 | 77 | 22 | 47 |
| Philippines | 92 | 80 | 86 | 88 | 66 | 77 |
| Indinesia | 79 | 54 | 62 | 73 | 40 | 51 |
| Sri Lanka | 88 | 52 | 57 | 68 | 62 | 63 |
| Nepal | 88 | 60 | 63 | 58 | 12 | 1 |

Country A is said to dominate B or A > B if A has higher percentage in total coverage for both drinking water and sanitation facilities, and, B is said to be dominated by A, or B < A.

A country is said to be on the coverage frontier if no other country dominates it. Similarly, a country is not on the coverage frontier if it is dominated by at least one other country.

These relate to the above table with the additional provison that the gap between the population coverages of ‘sanitation facilities’ and ‘drinking water facilities’ is a measure of disparity in coverage.

The country with the least disparity in coverage of urban sector is

A. India B. Pakistan C. Philippines D. None of these

## 2.19.100 Logical Reasoning: CAT 1999 | Question: 156 top

**The question is followed by two statements I and II.**

**Mark**

A. if the question can be answered by any one of the statements alone, but cannot be answered by using the other statement alone.
B. if the question can be answered by using either statement alone.
C. if the question can be answered by using both the statements together, but cannot be answered by using either statement alone.
D. if the question cannot be answered even by using both the statements together.

The average weight of students in a class is 50 kg. What is the number of students in the class?

I. The heaviest and the lightest members of the class weigh 60 kg and 40 kg respectively.
II. Exclusion of the heaviest and the lightest members from the class does not change the average weight of the students.

logical-reasoning cat1999

Answer key

## 2.19.101 Logical Reasoning: CAT 1999 | Question: 157 top

**The question is followed by two statements I and II.**

**Mark**

A. if the question can be answered by any one of the statements alone, but cannot be answered by using the other statement alone.
B. if the question can be answered by using either statement alone.
C. if the question can be answered by using both the statements together, but cannot be answered by using either statement alone.

D. if the question cannot be answered even by using both the statements together.

A small storage tank is spherical in shape. What is the storage volume of the tank?

I. The wall thickness of the tank is $1$ cm.
II. When an empty spherical tank is immersed in a large tank filled with water, $20$ l of water overflow from the large tank.

logical-reasoning cat1999

Answer key

## 2.19.102 Logical Reasoning: CAT 1999 | Question: 158 top

**The question is followed by two statements I and II.**

**Mark**

A. if the question can be answered by any one of the statements alone, but cannot be answered by using the other statement alone.
B. if the question can be answered by using either statement alone.
C. if the question can be answered by using both the statements together, but cannot be answered by using either statement alone.
D. if the question cannot be answered even by using both the statements together.

Mr X starts walking northwards along the boundary of a field from point A on the boundary, and after walking for $150$ m reaches B, and then walks westwards, again along the boundary, for another $100$ m when he reaches C. What is the maximum distance between any pair of points on the boundary of the field?

I. The field is rectangular in shape.
II. The field is a polygon, with C as one of its vertices and A as the mid-point of a side.

logical-reasoning cat1999

Answer key

## 2.19.103 Logical Reasoning: CAT 1999 | Question: 159 top

**The question is followed by two statements I and II.**

**Mark**

A. if the question can be answered by any one of the statements alone, but cannot be answered by using the other statement alone.
B. if the question can be answered by using either statement alone.
C. if the question can be answered by using both the statements together, but cannot be answered by using either statement alone.
D. if the question cannot be answered even by using both the statements together.

A line graph on a graph sheet shows the revenue for each year from $1990$ through $1998$ by points and joins the successive points by straight-line segments. The point for revenue of $1990$ is labelled A, that for $1991$ as B, and that for $1992$ as C. What is the ratio of growth in revenue between $1991-92$ and $1990-91$?

I. The angle between AB and X-axis when measured with a protractor is $40^\circ$, and the angle between CB and X-axis is $80^\circ$.
II. The scale of Y-axis is $1\text{ cm} = \text{Rs. } 100$

Answer key

## 2.19.104 Logical Reasoning: CAT 1999 | Question: 161 top

**The question is followed by two statements I and II.**

**Mark**

A. if the question can be answered by any one of the statements alone, but cannot be answered by using the other statement alone.
B. if the question can be answered by using either statement alone.

C. if the question can be answered by using both the statements together, but cannot be answered by using either statement alone.
D. if the question cannot be answered even by using both the statements together.

Find a pair of real numbers x and y that satisfy the following two equations simultaneously. It is known that the values of a, b, c, d, e and f are non-zero.

$ax + by = c$

$dx + ey = f$

I. a = kd and b = ke, c = kf, k $\neq 0$
II. a = b = 1, d = e = 2, f $\neq$ 2c

logical-reasoning cat1999

Answer key

## 2.19.105 Logical Reasoning: CAT 1999 | Question: 162 top

**The question is followed by two statements I and II.**

**Mark**

A. if the question can be answered by any one of the statements alone, but cannot be answered by using the other statement alone.
B. if the question can be answered by using either statement alone.
C. if the question can be answered by using both the statements together, but cannot be answered by using either statement alone.
D. if the question cannot be answered even by using both the statements together.

Three professors A, B and C are separately given three sets of numbers to add. They were expected to find the answers to $1 + 1, 1 + 1 + 2,$ and $1 + 1$ respectively. Their respective answers were $3, 3$ and $2$. How many of the professors are mathematicians?

I. A mathematician can never add two numbers correctly, but can always add three numberscorrectly.
II. When a mathematician makes a mistake in a sum, the error is $+1$ or $-1$.

## 2.19.112 Logical Reasoning: CAT 1999 | Question: 78 top

**Answer the question based on the following information.**

A young girl Roopa leaves home with x flowers, goes to the bank of a nearby river. On the bank of the river, there are four places of worship, standing in a row. She dips all the x flowers into the river. The number of flowers doubles. Then she enters the first place of worship, offers y flowers to the deity. She dips the remaining flowers into the river, and again the number of flowers doubles. She goes to the second place of worship, offers y flowers to the deity. She dips the remaining flowers into the river, and again the number of flowers doubles. She goes to the third place of worship, offers y flowers to the deity. She dips the remaining flowers into the river, and again the number of flowers doubles. She goes to the fourth place of worship, offers y flowers to the deity. Now she is left with no flowers in hand.

If Roopa leaves home with 30 flowers, the number of flowers she offers to each deity is

A. 30 B. 31 C. 32 D. 33

cat1999 logical-reasoning

Answer key

## 2.19.113 Logical Reasoning: CAT 1999 | Question: 79 top

**Answer the question based on the following information.**

A young girl Roopa leaves home with x flowers, goes to the bank of a nearby river. On the bank of the river, there are four places of worship, standing in a row. She dips all the x flowers into the river. The number of flowers doubles. Then she enters the first place of worship, offers y flowers to the deity. She dips the remaining flowers into the river, and again the number of flowers doubles. She goes to the second place of worship, offers y flowers to the deity. She dips the remaining flowers into the river, and again the number of flowers doubles. She goes to the third place of worship, offers y flowers to the deity. She dips the remaining flowers into the river, and again the number of flowers doubles. She goes to the fourth place of worship, offers y flowers to the deity. Now she is left with no flowers in hand.

The minimum number of flowers that could be offered to each deity is

A. 0
B. 15
C. 16
D. Cannot be determined

cat1999 logical-reasoning

Answer key

## 2.19.114 Logical Reasoning: CAT 1999 | Question: 80 top

**Answer the question based on the following information.**

A young girl Roopa leaves home with x flowers, goes to the bank of a nearby river. On the bank of the river, there are four places of worship, standing in a row. She dips all the x flowers into the river. The number of flowers doubles. Then she enters the first place of worship, offers y flowers to the deity. She dips the remaining flowers into the river, and again the number of flowers doubles. She goes to the second place of worship, offers y flowers to the deity. She dips the remaining flowers into the river, and again the number of flowers doubles. She goes to the third place of worship, offers y flowers to the deity. She dips the remaining flowers into the river, and again the number of flowers doubles. She goes to the fourth place of worship, offers y flowers to the deity. Now she is left with no flowers in hand.

The minimum number of flowers with which Roopa leaves home is

A. 16
B. 15
C. 0
D. Cannot be determined

## 2.19.115 Logical Reasoning: CAT 1999 | Question: 81 top

**Answer the question based on the following information.**
The following table presents the sweetness of different items relative to sucrose, whose sweetness is taken to be 1.00.

| | |
|---|---|
| Lactose | 0.16 |
| Maltose | 0.32 |
| Glucose | 0.74 |
| Surcose | 1.00 |
| Fructose | 1.70 |
| Saccharin | 675.00 |

What is the minimum amount of sucrose (to the nearest gram) that must be added to one gram of saccharin to make a mixture that will be at least 100 times as sweet as glucose?

A. 7
B. 8
C. 9
D. 100

cat1999 logical-reasoning

## 2.19.116 Logical Reasoning: CAT 1999 | Question: 82 top

**Answer the question based on the following information.**
The following table presents the sweetness of different items relative to sucrose, whose sweetness is taken to be 1.00.

| | |
|---|---|
| Lactose | 0.16 |
| Maltose | 0.32 |
| Glucose | 0.74 |
| Surcose | 1.00 |
| Fructose | 1.70 |
| Saccharin | 675.00 |

Approximately how many times sweeter than sucrose is a mixture consisting of glucose, sucrose and fructose in the ratio of 1 : 2 : 3?

A. 1.3
B. 1.0
C. 0.6
D. 2.3

cat1999 logical-reasoning

## 2.19.117 Logical Reasoning: CAT 1999 | Question: 83 top

**Answer the question based on the following information.**
A, B, C, D, E and F are a group of friends from a club. There are two housewives, one lecturer, one architect, one accountant and one lawyer in the group. There are two married couples in the group. The lawyer is married to D who is a housewife. No lady in the group is either an architect or an accountant. C, the accountant, is married to F who is a lecturer. A is married to D and E is not a housewife.
What is the profession of E?

A. Lawyer
B. Architect
C. Lecturer
D. Accountant

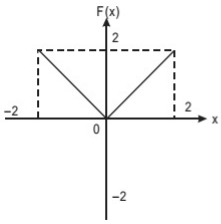
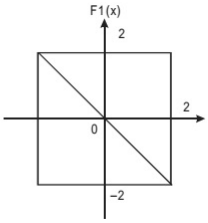
D. if none of the above is true





cat1999 logical-reasoning

Answer key

## 2.19.127 Logical Reasoning: CAT 1999 | Question: 93 top

**Answer the question based on the following information.**
There are blue vessels with known volumes $v_1, v_2 \ldots, v_m$, arranged in ascending order of volume, $v_1 > 0.5$ litre, and $v_m < 1$ litre. Each of these is full of water initially. The water from each of these is emptied into a minimum number of empty white vessels, each having volume 1 litre. The water from a blue vessel is not emptied into a white vessel unless the white vessel has enough empty volume to hold all the water of the blue vessel. The number of white vessels required to empty all the blue vessels according to the above rules was n.
Among the four values given below, which is the least upper bound on e, where e is the total empty volume in the white vessels at the end of the above process?

A. $mv_m$ B. $m(1 - v_m)$ C. $mv_1$ D. $m(1 - v_1)$

cat1999 logical-reasoning

Answer key

## 2.19.128 Logical Reasoning: CAT 1999 | Question: 94 top

**Answer the question based on the following information.**
There are blue vessels with known volumes $v_1, v_2 \ldots, v_m$, arranged in ascending order of volume, $v_1 > 0.5$ litre, and $v_m < 1$ litre. Each of these is full of water initially. The water from each of these is emptied into a minimum number of empty white vessels, each having volume 1 litre. The water from a blue vessel is not emptied into a white vessel unless the white vessel has enough empty volume to hold all the water of the blue vessel. The number of white vessels required to empty all the blue vessels according to the above rules was n.

Let the number of white vessels needed be $n_1$ for the emptying process described above, if the volume of each white vessel is 2 litres. Among the following values, which is the least upper bound on $n_1$?

A. $\frac{m}{4}$

B. smallest integer greater than or equal to $\frac{n}{2}$

C. $n$

D. greatest integer less than or equal to $\frac{n}{2}$

cat1999 logical-reasoning

## 2.19.129 Logical Reasoning: CAT 1999 | Question: 95 top

**Answer the question based on the following information:**

There are 50 integers $a_1, a_2, \ldots, a_{50}$, not all of then necessarily different. Let the greatest integer of these 50 integers be referred as G, and the smallest integer be referred to as L. The integers $a_1$ through $a_{24}$ form sequence S1, and the rest form S2. Each member of S1 is less than or equal to each member of S2.

All values in S1 are changed in sign, while those in S2 remain unchanged. Which of the following statement is true?

A. Every member of S1 is greater than or equal to every member of S2.
B. G is in S1.
C. If all numbers originally in S1 and S2 had the same sign, then after the change of sign, the largest number of S1 and S2 is in S1.
D. None of the above

cat1999 logical-reasoning

Answer key

## 2.19.130 Logical Reasoning: CAT 1999 | Question: 96 top

**Answer the question based on the following information:**

There are 50 integers $a_1, a_2, \ldots, a_{50}$, not all of then necessarily different. Let the greatest integer of these 50 integers be referred as G, and the smallest integer be referred to as L. The integers $a_1$ through $a_{24}$ form sequence S1, and the rest form S2. Each member of S1 is less than or equal to each member of S2.

Elements of S1 are in ascending order, and those of S2 are in descending order. $a_{24}$ and $a_{25}$ are interchanged. Then which of the following statements is true?

A. S1 continues to be in ascending order.
B. S2 continues to be in descending order.
C. S1 continues to be in ascending order and S2 in descending order.
D. None of the above

cat1999 logical-reasoning

Answer key

## 2.19.131 Logical Reasoning: CAT 1999 | Question: 97 top

**Answer the question based on the following information:**

There are 50 integers $a_1, a_2, \ldots, a_{50}$, not all of then necessarily different. Let the greatest integer of these 50 integers be referred as G, and the smallest integer be referred to as L. The integers $a_1$ through $a_{24}$ form sequence S1, and the rest form S2. Each member of S1 is less than or equal to each member of S2.

Every element of S1 is made greater than or equal to every element of S2 by adding to each element of S1 an integer x. Then x cannot be less than

A. $2^{10}$
B. the smallest value of S2
C. the largest value of S2
D. (G – L)

## 2.19.132 Logical Reasoning: CAT 1999 | Question: 99 top

**Answer the question based on the information given below:**

Let x and y be real numbers and let

$f(x, y) = |x + y|$, $F(f(x, y)) = -f(x, y)$ and $G(f(x, y)) = -F(f(x, y))$

What is the value of $f(G(f(1, 0)), f(F(f(1, 2)), G(f(1, 2))))$?

A. 3 B. 2 C. 1 D. 0

### 2.19.133 Logical Reasoning: CMI2010-A-05 top

You have two normal, fair, dice, with faces labelled $1, 2, \ldots, 6$. If you throw both dice, which of the following is true about the total value shown by the dice?

A. The probability that the total is $6$ is less than the probability that the total is $9$.
B. The probability that the total is $6$ is equal to the probability that the total is $9$.
C. The probability that the total is $6$ is greater than the probability that the total is $9$.
D. None of the above.

### 2.19.134 Logical Reasoning: Five friends F, M, K, N and Y are working in 5 different hospitals C, P, O, S and U top

Five friends F, M, K, N and Y are working in 5 different hospitals C, P, O, S and U and they earn different salaries ie Rs. 8000, Rs. 12000, Rs. 15000, Rs. 18000 and Rs. 20000 and they all are of different ages i.e. $24, 26, 27, 29$ and $30$ years. These all informations are not necessarily in same order. Person who is 29 year old earns highest salary but does not work in C and P hospital. Y does not work in S and U hospital and his age is not 30. The salary of N is less than Rs.15000. The person who is 26 years old earns Rs.18000 per month. F earns Rs.12000 per month but does not work in P and S. M works in C hospital and earns more than Rs.15000. Person who is 27 years old works in U. 30 years old person earns at least Rs.15000.

### 2.19.137 Logical Reasoning: In a game, exactly six inverted cups stand by side in a straight line, and each has one ball hidden under it. top

In a game, exactly six inverted cups stand side by side in a straight line, and each has exactly one ball hidden under it. The cups are numbered consecutively 1 through 6. Each of the balls is painted a single solid color. The colors of the balls are Green, Magenta, Orange, Purple, Red and Yellow. The balls have been hidden under the cups in a manner that confirms to the following conditions.

The purple ball must be hidden under a lower numbered cup than the orange ball.

The red ball must be hidden under a cup immediately adjacent to the cup under which the magenta ball is hidden.

The green ball must be hidden under cup 5.

1 ) Which of the following could be the colors of the balls under the cups, in order from 1 through 6?

1. Green, Yellow, Magenta, Red, Purple, Orange.
2. Magenta, Green, Purple, Red, Orange, Yellow.
3. Magenta, Red, Purple, Yellow, Green, Orange.
4. Orange, Yellow, Red, Magenta, Green, Purple.
5. Red, Purple, Magenta, Yellow, Green, Orange.

2 ) If the magenta ball is under cup 4, the red ball must be under cup..

1. 1
2. 2
3. 3
4. 5
5. 6

3 ) A ball of which of the following colors could be under cup 6 ?

1. Green
2. Magenta
3. Purple
4. Red
5. Yellow.

4 ) If the purple ball is under cup 4, the orange ball must be under cup..

1. 1
2. 2
3. 3
4. 5
5. 6

5 ) Which of the following must be true?

1. The green ball is under a lower - numbered cup than the yellow ball.
2. The orange ball is under a lower - numbered cup than the green ball
3. The purple ball is under a lower - numbered cup  than the green ball
4. The purple ball is under a lower - numbered cup than the red ball.
5. The red ball is under a lower - numbered cup than the yellow ball.

6 ) If the orange ball is under cup 2, balls of which of the following colors could be under cups immediately adjacent to each other?

1. Green and Magenta
2. Green and Purple
3. Orange and Yellow
4. Purple and Red
5. Red and Yellow

7 ) If the magenta ball is under cup 1, balls of which of the following colors must be under cups immediately adjacent to each other?

1. Green and Orange
2. Green and Yellow
3. Purple and Red
4. Purple and Yellow
5. Red and Yellow.

## 2.19.143 Logical Reasoning: Seating arrangement for SBI Po 2017 (toughest). top

There are eight members of a family–P, Q, R, S, T, U, W and Z. All of them are sitting around a circular table facing the centre. They belong to three different generations and there are three married couples among them. Four of them are males and four of them are of the opposite gender (though not necessarily in the same order.)They like different movies viz., The Twins, Twelve, Turbo, The Twilight Saga, Typhon, Twin Dragons, The Twelve Chairs and Twentieth Century but not necessarily in the same order. Further, some more information is also given.

• The son-in-law and maternal grandson of Z are immediate neighbours. W cannot be an immediate neighbour of her sister-in-law. W likes the movie Twelve.

• Q, a spinster, is sitting two places to the right of her grandfather T. Neither R nor T likes the movie The Twelve Chairs. P and his sibling S can't sit together. Typhoon is liked by the brother-in-law of R.

• There are only three persons sitting between the person who likes Twin Dragons and her aunt S. R, a married male, cannot be an immediate neighbour of either T or Q. R does not like the movie Twentieth Century or The Twins.

• The Twelve chairs the movie is not liked by either S or Z. U and Q are not siblings. T does not like the movie Turbo or The Twins. There is only one person sitting between R and his brother-in-law. Turbo is not liked by the Son-in-law of Z.

Please explan with steps. Also i got confused by word maternal grandson of Z what is meant by this. Thanks in advance. All student who are trying for Sbi po should try this one

## 2.19.144 Logical Reasoning: Study the information and answer the questions top

P, Q, R, S, T, V and W are seven friends. Each of them like a particular fruit, viz. Apple, Banana, Pear, Guava, Orange, Mango and Watermelon and each of them has a favourite city, viz. Mumbai, Pune, Delhi, Kolkata, Chennai, Hyderabad and Cochin. the choices of fruit and favourite city of the seven friends are not necessarily in the same order.

Q likes Mango and his favourite city is Chennai. The one whose favourite city is Pune likes Watermelon. T's favourite city is Kolkata. R likes Guava and his favourite city is not Mumbai. W's favourite city is Cochin and he does not like either Banana or Pear. The favourite city of the one who likes Orange is Hyderabad. T does not like poor. P's favourite city is neither Pune nor Hyderabad. S does not like Watermelon.

1. Who likes Apple?

1. W
2. T
3. V
4. P
5. Data inadequate

2. Which fruit does P like?

1. Apple
2. Orange
3. Pear
4. Watermelon
5. None of these

3. Which is R's favourite city?

1. Mumbai
2. Pune
3. Hyderabad
4. Delhi
5. None of these

4. Which of the following combinations of Person-Fruit-City is incorrect?

1. R-Guava-Kolkata
2. V-Watermelon-Hyderabad
3. T-Banana-Cochin
4. S-Guava-Delhi
5. All are incorrect

5. Which is V's favorite city?

1. Hyderabad
2. Pune
3. Mumbai
4. Data inadequate
5. None of these

**2.19.145 Logical Reasoning: The Resilience Petrochemical Refinery at Zamnagar ships the naphtha it produces by using a group of five contracted bulk material transporters (namely KLM, SAS, ABC, SRM and KBC).** top

The Resilience petrochemical refinery at Jamnagar ships the naphtha it produces by using a group of five contracted bulk material transporters ( namely KLM, SAS, ABC, SRM, and KBC).

The five transporters dealt with a total of 40 millions tonnes of naphtha for the Jamnagar refinery and incurred a total cost of Rs. 90 million for the same.

The first pie-chart shows the distribution of the transportation ( by tonnage ) done by the five transporters for the naphtha that they transported for the Jamnagar refinery.

The second pie chart gives the break up of the total cost incurred by the five transporters for the above.

1. If M, N, O and P are the cost incurred per ton of the naphtha transported by SAS, KLM, KBC, and ABC respectively, the correct relationship among them is

O < N, M < P, N < P

P > O, P < N, N < M

M > N, P > O, N < P

P < N, M > N, O < N

2. The average cost incurred per ton of naphtha transported by ABC and SRM is

RS. 2.67

RS. 3.01

RS. 2.81

RS. 1.93

3. Of all the options available the cheapest contracted bulk transporter is

a.SRM

b.KBC

c.KLM

d.ABC

## 2.19.147 Logical Reasoning: There are eight members P, Q, R, S, T, U, V and W in a family. These eight persons belong to three different generations, such that there are three married couples, while two members are unmarried. Each couple has at least a child. top

There are eight members P, Q, R, S, T, U, V, and W in a family. These eight persons belongs to three different generation, such that there are three married couples, while two members are unmarried. Each couple has at least a child.

Further it is known that each of these eight persons works with a different company among A, B, C, D, E, F, G and H in any order. V and R are the only siblings in the family and U, W, R and S are of the same gender. W and V do not form a married couple. The person who works with A is the mother of the person who works with F, who, in turn is female. V does not work with E and his daughter is S. R works with B. The person who works with G and the one who works with E belong to the same generation. The person who works with G is female , whereas the person who is working with E is a male. The persons who works with C is the maternal grandfather of Q, who in turn works with D. T works with H.

1. Which company does W work with?

a. H
b. G
c. F
d. A

2. Who among the following is the spouse of the person working with E?

a. R
b. S
c. W
d. The person works with E is unmarried.

3. Which of the following pairs of persons form a married couple?

a. V and U
b. S and T
c. R and T
d. More than one of the above

4. Which of the following statements is/are definitely true?

a. U works with A.
b. W is the daughter of P.
c. Q is a male
d. More than one of the above

Study the following information carefully to answer the questions given below:

A number sorting machine when given an input of numbers, rearranges the numbers in a particular manner step by step as indicated below till all the numbers are arranged in a particular order. Given below is an illustration of this arrangement.

Input : 39 121 48 18 76 112 14 45 63 96

Step I : 14 39 121 48 18 76 112 45 63 96

Step II : 14 39 48 18 76 112 45 63 96 121

Step III: 14 18 39 48 76 112 45 63 96 121

Step IV : 14 18 39 48 76 45 63 96 112 121

Step V : 14 18 39 45 48 76 63 96 112 121

Step VI : 14 18 39 45 48 63 76 96 112 121

(This is the final arrangement and Step VI is the last step for this input)

Which of the following will be the third step for the following input ?

Input : 45 78 97 132 28 16 146 54 99 112

A. 16 28 45 78 97 146 54 99 112 132
B. 16 28 45 97 78 54 99 112 132 146
C. 16 28 45 78 97 132 54 99 112 146
D. 16 28 45 97 78 132 99 54 112 146

**Answer (2) if question can be solved by using either of the two statements.**

**Answer (3) if the question can be solved by using both the statements together and not by any one of them.**

**Answer (4) if the question cannot be solved with the help of given data and more data is required.**

A sum of Rs. 38, 500 was divided among Jagdish, Punit, and Girish. Who received the minimum amount?

A. Jagdish received $2/9$ of what Punit and Girish together received.
B. Punit received $3/11$ of what Jagdish and Girish together received.

cat2002 logical-reasoning logic-puzzles numerical-answer

### 2.24.9 Numerical Answer: CAT 2014 | Question: 5 top

The question is followed by two statements, I and II. Mark the answer as.

a. if the question can be answered with the help of statement I alone.

b. if the question can be answered with the help of statement II, alone.
c. if both statement I and statement II are needed to answer the question.
d. if the question cannot be answered even with the help of both the statements.

If $x$, $y$ and $z$ are real numbers, is $z-x$ even or odd?

I. $xyz$ is odd.
II. $xy + yz + zx$ is even.

Answer the questions based on following data.

The pages of a book are numbered $0, 1, 2\ldots$ upto $M, M > 0$. There are four categories of instructions that direct a person in positioning the book at a page. The instruction types and their meanings are :

1. NEW : Position the book at page No. 1
2. END : Position the book at page No. 0
3. ONWARD, $n$ :From the current page move forward by $n$ pages; if, in this process, page number $M$ is reached, stop at $M$.
4. REGRESS, $n$ : From the current page, move backward by $n$ pages; if in this process, page number 0 is reached, stop at page number 0.

In each of the following questions, you will find a sequence of instructions formed from the above categories. In each case, let $n1$ be the page number before the instructions are executed and $n2$ be the page number at which the book is positioned after the instructions are executed.

## 2.24.10 Numerical Answer: CAT 2015 | Question: 55 top

Answer the question on the basis of the information given below:

Mathematicians are assigned a number called Zohos number (named after the famous mathematician, Paul Zohos). Only Paul Zohos himself has an Zohos number of zero. Any mathematician who has written a research paper with Zohos has an Zohos number of 1. For other mathematicians, the calculation of his/her Zohos number is illustrated below:

Suppose that a mathematician X has co-authored papers with several other mathematicians. From among them, mathematician Y has the smallest Zohos number. Let the Zohos number of Y be $y$. Then X has an Zohos number of $y + 1$. Hence any mathematician with no co-authorship chain connected to Zohos has an Zohos number of infinity.

In a seven day long mini-conference organized in memory of Paul Zohos, a close group of eight mathematicians, call them A, B, C, D, E, F, G and H, discussed some research problems. At the beginning of conference, A was the only participant who had an infinite Zohos number. Nobody had an Zohos number less than that of F.

1. On the third day of the conference F co-authored a paper jointly with A and C. This reduced the average Zohos number of the group of eight mathematicians to 3. The Zohos numbers of B, D, E, G and H remained unchanged with the writing of this paper. Further, no other co-authorship among any three members would have reduced the average Zohos number of the group of eight to as low as 3.
2. At the end of the third day, five members of this group had identical Zohos numbers while the other three had Zohos numbers distinct from each other.
3. On the fifth day, E co-authored a paper with F which reduced the group's average Zohos number by 0.5. The Zohos numbers of the remaining six were unchanged with the writing of this paper.
4. No other paper was written during the conference.

How many participants in the conference did not change their Zohos number during the conference?

cat2015 logical-reasoning logic-puzzles numerical-answer

## 2.24.11 Numerical Answer: CAT 2015 | Question: 56 top

Answer the question on the basis of the information given below:

Mathematicians are assigned a number called Zohos number (named after the famous mathematician, Paul Zohos). Only Paul Zohos himself has an Zohos number of zero. Any mathematician who has written a research paper with Zohos has an Zohos number of 1. For other mathematicians, the calculation of his/her Zohos number is illustrated below:

Suppose that a mathematician X has co-authored papers with several other mathematicians. From among them, mathematician Y has the smallest Zohos number. Let the Zohos number of Y be $y$. Then X has an Zohos number of $y + 1$. Hence any mathematician with no co-authorship chain connected to Zohos has an Zohos number of infinity.

In a seven day long mini-conference organized in memory of Paul Zohos, a close group of eight mathematicians, call them

A, B, C, D, E, F, G and H, discussed some research problems. At the beginning of conference, A was the only participant who had an infinite Zohos number. Nobody had an Zohos number less than that of F.

1. On the third day of the conference F co-authored a paper jointly with A and C. This reduced the average Zohos number of the group of eight mathematicians to 3. The Zohos numbers of B, D, E, G and H remained unchanged with the writing of this paper. Further, no other co-authorship among any three members would have reduced the average Zohos number of the group of eight to as low as 3.
2. At the end of the third day, five members of this group had identical Zohos numbers while the other three had Zohos numbers distinct from each other.
3. On the fifth day, E co-authored a paper with F which reduced the group's average Zohos number by 0.5. The Zohos numbers of the remaining six were unchanged with the writing of this paper.
4. No other paper was written during the conference.

The person having the largest Zohos number at the end of the conference must have had Zohos number (at that time): _____

cat2015 logical-reasoning logic-puzzles numerical-answer

### 2.24.12 Numerical Answer: CAT 2015 | Question: 57 top

Answer the question on the basis of the information given below:

Mathematicians are assigned a number called Zohos number (named after the famous mathematician, Paul Zohos). Only Paul Zohos himself has an Zohos number of zero. Any mathematician who has written a research paper with Zohos has an Zohos number of 1. For other mathematicians, the calculation of his/her Zohos number is illustrated below:

numbers distinct from each other.

3. On the fifth day, E co-authored a paper with F which reduced the group's average Zohos number by 0.5. The Zohos numbers of the remaining six were unchanged with the writing of this paper.
4. No other paper was written during the conference.

The Zohos number of C at the end of the conference was: _____

cat2015 logical-reasoning logic-puzzles numerical-answer

## 2.24.14 Numerical Answer: CAT 2015 | Question: 63 top

Answer the following questions based on the information given below:

For admission to various affiliated colleges, a university conducts a written test with four different sections, each with a maximum of 50 marks. The following table gives the aggregate as well as the sectional cut-off marks fixed by six different colleges affiliated to the university. A student will get admission only if he/she gets marks greater than on equal to the cut-off marks in each of the sections and his/her aggregate marks are at least equal to the aggregate cut-off marks as specified by the college.

| College | Sectional Cut–off Marks | | | | |
|---|---|---|---|---|---|
| | A. Quant | B. Verbal | C. Logic | D. DI | Aggregate Cut–off Marks |
| College 1 | 42 | 42 | 42 | | 176 |
| College 2 | | 45 | 45 | | 175 |
| College 3 | | | 46 | | 171 |
| College 4 | 43 | | | 45 | 178 |
| College 5 | 45 | | 43 | | 180 |
| College 6 | | 41 | | 44 | 176 |

Ramaya got calls from colleges. What could be the minimum aggregate marks obtained by her?

cat2015 logical-reasoning logic-puzzles numerical-answer

## 2.24.15 Numerical Answer: CAT 2015 | Question: 64 top

Answer the following questions based on the information given below:

For admission to various affiliated colleges, a university conducts a written test with four different sections, each with a maximum of 50 marks. The following table gives the aggregate as well as the sectional cut-off marks fixed by six different colleges affiliated to the university. A student will get admission only if he/she gets marks greater than on equal to the cut-off marks in each of the sections and his/her aggregate marks are at least equal to the aggregate cut-off marks as specified by the college.

| College | Sectional Cut–off Marks | | | | |
|---|---|---|---|---|---|
| | A. Quant | B. Verbal | C. Logic | D. DI | Aggregate Cut–off Marks |
| College 1 | 42 | 42 | 42 | | 176 |
| College 2 | | 45 | 45 | | 175 |
| College 3 | | | 46 | | 171 |
| College 4 | 43 | | | 45 | 178 |
| College 5 | 45 | | 43 | | 180 |
| College 6 | | 41 | | 44 | 176 |

Gauri got calls from two colleges. What could be the minimum marks obtained by him in a section?

cat2015 logical-reasoning logic-puzzles numerical-answer

## 2.24.16 Numerical Answer: CAT 2015 | Question: 65 top

Answer the following questions based on the information given below:

For admission to various affiliated colleges, a university conducts a written test with four different sections, each with a maximum of 50 marks. The following table gives the aggregate as well as the sectional cut-off marks fixed by six different colleges affiliated to the university. A student will get admission only if he/she gets marks greater than on equal to the cut-off marks in each of the sections and his/her aggregate marks are at least equal to the aggregate cut-off marks as specified by the college.

| College | Sectional Cut–off Marks | | | | |
|---|---|---|---|---|---|

| | A. Quant | B. Verbal | C. Logic | D. DI | Aggregate Cut–off Marks |
| College 1 | 42 | 42 | 42 | | 176 |
| College 2 | | 45 | 45 | | 175 |
| College 3 | | | 46 | | 171 |
| College 4 | 43 | | | 45 | 178 |
| College 5 | 45 | | 43 | | 180 |
| College 6 | | 41 | | 44 | 176 |

What is the maximum score required by a Cetking student in Section D so that student clear all colleges cut-off?

cat2015 logical-reasoning logic-puzzles numerical-answer

## 2.24.18 Numerical Answer: CAT 2016 | Question: 39 top

The table below gives information about four different crops, their different quality categories and the regions where they are cultivated. Based on the information given in the table answer the questions given below.

Type of Crops with Quality and Region

| | | | | |
|---|---|---|---|---|
| Crop-1 | ⇒ | High R1, R2, R3, R4, R5 | Medium R6, R7, R8 | Low R9, R10, R11 |
| Crop-2 | ⇒ | High R5, R8, R12 | Medium R9, R13 | Low R6 |
| Crop-3 | ⇒ | High R2, R6, R7, R13 | Medium R3, R9, R11 | Low R1, R4 |
| Crop-4 | ⇒ | High R3, R10, R11 | Medium R1, R2, R4 | Low R5, R9 |

How many regions produce medium qualities of Crop-1 or Crop-2 and also produce low quality of Crop-3 or Crop-4 _____

cat2016 logical-reasoning logic-puzzles numerical-answer

## 2.24.19 Numerical Answer: CAT 2016 | Question: 41 top

The table below gives information about four different crops, their different quality categories and the regions where they are cultivated. Based on the information given in the table answer the questions given below.

Type of Crops with Quality and Region

| | | | | |
|---|---|---|---|---|
| Crop-1 | ⇒ | High R1, R2, R3, R4, R5 | Medium R6, R7, R8 | Low R9, R10, R11 |
| Crop-2 | ⇒ | High R5, R8, R12 | Medium R9, R13 | Low R6 |
| Crop-3 | ⇒ | High R2, R6, R7, R13 | Medium R3, R9, R11 | Low R1, R4 |
| Crop-4 | ⇒ | High R3, R10, R11 | Medium R1, R2, R4 | Low R5, R9 |

How many low quality Crop-1 producing regions are either high quality Crop-4 producing regions or medium quality Crop-3 producing regions _____

cat2016 logical-reasoning logic-puzzles numerical-answer

## 2.24.20 Numerical Answer: CAT 2016 | Question: 42 top

The table below gives information about four different crops, their different quality categories and the regions where they are cultivated. Based on the information given in the table answer the questions given below.

Type of Crops with Quality and Region

| | | | | |
|---|---|---|---|---|
| Crop-1 | ⇒ | High R1, R2, R3, R4, R5 | Medium R6, R7, R8 | Low R9, R10, R11 |
| Crop-2 | ⇒ | High R5, R8, R12 | Medium R9, R13 | Low R6 |
| Crop-3 | ⇒ | High R2, R6, R7, R13 | Medium R3, R9, R11 | Low R1, R4 |
| Crop-4 | ⇒ | High R3, R10, R11 | Medium R1, R2, R4 | Low R5, R9 |

How many high quality Crop-4 producing regions are there _____

cat2016 logical-reasoning logic-puzzles numerical-answer

## 2.24.21 Numerical Answer: CAT 2017 Set-1 | Question: 61 top

A new airlines company is planning to start operations in a country. The company has identified ten different cities which they plan to connect through their network to start with. The flight duration between any pair of cities will be less than one hour. To start operations, the company has to decide on a daily schedule.

The underlying principle that they are working on is the following:

Any person staying in any of these 10 cities should be able to make a trip to any other city in the morning and should be able to return by the evening of the same day.

Suppose the 10 cities are divided into 4 distinct groups G1, G2, G3, G4 having 3, 3, 2 and 2 cities respectively and that G1 consists of cities named A, B and C. Further, suppose that direct flights are allowed only between two cities satisfying one of the following:

a. Both cities are in G1
b. Between A and any city in G2
c. Between B and any city in G3
d. Between C and any city in G4

Then the minimum number of direct flights that satisfies the underlying principle of the airline is _____

cat2017-1 logical-reasoning logic-puzzles numerical-answer

### 2.24.22 Numerical Answer: CAT 2018 Set-1 | Question: 43 top

An ATM dispenses exactly Rs. 5000 per withdrawal using 100, 200 and 500 rupee notes. The ATM requires every customer to give her preference for one of the three denominations of notes. It then dispenses notes such that the number of notes of the customer's preferred denomination exceeds the total number of notes of other denominations dispensed to her.

In how many different ways can the ATM serve a customer who gives 500 rupee notes as her preference?

cat2018-1 logical-reasoning logic-puzzles numerical-answer

### 2.24.23 Numerical Answer: CAT 2018 Set-1 | Question: 44 top

An ATM dispenses exactly Rs. 5000 per withdrawal using 100, 200 and 500 rupee notes. The ATM requires every customer to give her preference for one of the three denominations of notes. It then dispenses notes such that the number of notes of the customer's preferred denomination exceeds the total number of notes of other denominations dispensed to her.

If the ATM could serve only 10 customers with a stock of fifty 500 rupee notes and a sufficient number of notes of other denominations, what is the maximum number of customers among these 10 who could have given 500 rupee notes as their preferences?

cat2018-1 logical-reasoning logic-puzzles numerical-answer

### 2.24.24 Numerical Answer: CAT 2018 Set-1 | Question: 51 top

You are given an $n \times n$ square matrix to be filled with numerals so that no two adjacent cells have the same numeral. Two cells are called adjacent if they touch each other horizontally, vertically or diagonally. So a cell in one of the four corners has three cells adjacent to it, and a cell in the first or last row or column which is not in the corner has five cells adjacent to it. Any other cell has eight cells adjacent to it.

What is the minimum number of different numerals needed to fill a $3 \times 3$ square matrix?

cat2018-1 logical-reasoning logic-puzzles numerical-answer

### 2.24.25 Numerical Answer: CAT 2018 Set-1 | Question: 52 top

You are given an $n \times n$ square matrix to be filled with numerals so that no two adjacent cells have the same numeral. Two cells are called adjacent if they touch each other horizontally, vertically or diagonally. So a cell in one of the four corners has three cells adjacent to it, and a cell in the first or last row or column which is not in the corner has five cells adjacent to it. Any other cell has eight cells adjacent to it.

What is the minimum number of different numerals needed to fill a $5 \times 5$ square matrix?

cat2018-1 logical-reasoning logic-puzzles numerical-answer

### 2.24.26 Numerical Answer: CAT 2018 Set-1 | Question: 61 top

A company administers a written test comprising of three sections of 20 marks each – Data Interpretation (DI), Written English (WE) and General Awareness (GA), for recruitment. A composite score for a candidate (out of 80) is calculated by doubling her marks in DI and adding it to the sum of her marks in the other two sections. Candidates who score less than 70% marks in two or more sections are disqualified. From among the rest, the four with the highest composite scores are recruited. If four or less candidates qualify, all who qualify are recruited.

Ten candidates appeared for the written test. Their marks in the test are given in the table below. Some marks in the table are missing, but the following facts are known:

1. No two candidates had the same composite score.
2. Ajay was the unique highest scorer in WE.
3. Among the four recruited, Geeta had the lowest composite score.
4. Indu was recruited.
5. Danish, Harini, and Indu had scored the same marks the in GA.
6. Indu and Jatin both scored 100% in exactly one section and Jatin's composite score was 10 more than Indu's.

| Candidate | marks out of 20 | | |
|---|---|---|---|
| | DI | WE | GA |
| Ajay | 8 | | 16 |
| Bala | | 9 | 11 |
| Chetna | 19 | 4 | 12 |
| Danish | 8 | 15 | |
| Ester | 12 | 18 | 16 |
| Falak | 15 | 7 | 10 |
| Geeta | 14 | | 6 |
| Harini | 5 | | |
| Indu | | 8 | |
| Jatin | | 16 | 14 |

If all the candidates except Ajay and Danish had different marks in DI, and Bala's composite score was less than Chetna's composite score, then what is the maximum marks that Bala could have scored in DI _____

cat2018-1 logical-reasoning logic-puzzles numerical-answer

## 2.24.27 Numerical Answer: CAT 2018 Set-1 | Question: 62 top

A company administers a written test comprising of three sections of 20 marks each – Data Interpretation (DI), Written English (WE) and General Awareness (GA), for recruitment. A composite score for a candidate (out of 80) is calculated by doubling her marks in DI and adding it to the sum of her marks in the other two sections. Candidates who score less than 70% marks in two or more sections are disqualified. From among the rest, the four with the highest composite scores are recruited. If four or less candidates qualify, all who qualify are recruited.

Ten candidates appeared for the written test. Their marks in the test are given in the table below. Some marks in the table are missing, but the following facts are known:

1. No two candidates had the same composite score.
2. Ajay was the unique highest scorer in WE.
3. Among the four recruited, Geeta had the lowest composite score.
4. Indu was recruited.
5. Danish, Harini, and Indu had scored the same marks the in GA.
6. Indu and Jatin both scored 100% in exactly one section and Jatin's composite score was 10 more than Indu's.

| Candidate | marks out of 20 | | |
|---|---|---|---|
| | DI | WE | GA |
| Ajay | 8 | | 16 |
| Bala | | 9 | 11 |
| Chetna | 19 | 4 | 12 |
| Danish | 8 | 15 | |
| Ester | 12 | 18 | 16 |
| Falak | 15 | 7 | 10 |
| Geeta | 14 | | 6 |
| Harini | 5 | | |
| Indu | | 8 | |
| Jatin | | 16 | 14 |

If all the candidates scored different marks in WE then what is the maximum marks that Harini could have scored in WE _____

cat2018-1 logical-reasoning logic-puzzles numerical-answer

## 2.24.28 Numerical Answer: CAT 2018 Set-2 | Question: 47 top

The base exchange rate of a currency X with respect to a currency Y is the number of units of currency Y which is equivalent in value to one unit of currency X. Currency exchange outlets buy currency at buying exchange rates that are lower than base exchange rates, and sell currency at selling exchange rates that are higher than base exchange rates.

A currency exchange outlet uses the local currency L to buy and sell three international currencies A, B, and C, but does not exchange one international currency directly with another.
The base exchange rates of A, B and C with respect to L are in the ratio $100:120:1$. The buying exchange rates of each of A, B, and C with respect to L are 5% below the corresponding base exchange rates, and their selling exchange rates are 10% above their corresponding base exchange rates.

The following facts are known about the outlet on a particular day:

1. The amount of L used by the outlet to buy C equals the amount of L it received by selling C.
2. The amounts of L used by the outlet to buy A and B are in the ratio $5:3$.
3. The amounts of L the outlet received from the sales of A and B are in the ratio $5:9$.
4. The outlet received 88000 units of L by selling A during the day.
5. The outlet started the day with some amount of L, 2500 units of A, 4800 units of B, and 48000 units of C.

6. The outlet ended the day with some amount of L, 3300 units of A, 4800 units of B, and 51000 units of C.

How many units of currency A did the outlet buy on the day?

cat2018-2 logical-reasoning logic-puzzles numerical-answer

### 2.24.29 Numerical Answer: CAT 2018 Set-2 | Question: 49 top

The base exchange rate of a currency X with respect to a currency Y is the number of units of currency Y which is equivalent in value to one unit of currency X. Currency exchange outlets buy currency at buying exchange rates that are lower than base exchange rates, and sell currency at selling exchange rates that are higher than base exchange rates.

A currency exchange outlet uses the local currency L to buy and sell three international currencies A, B, and C, but does not exchange one international currency directly with another.
The base exchange rates of A, B and C with respect to L are in the ratio 100 : 120 : 1. The buying exchange rates of each of A, B, and C with respect to L are 5% below the corresponding base exchange rates, and their selling exchange rates are 10% above their corresponding base exchange rates.

The following facts are known about the outlet on a particular day:

1. The amount of L used by the outlet to buy C equals the amount of L it received by selling C.
2. The amounts of L used by the outlet to buy A and B are in the ratio 5 : 3.
3. The amounts of L the outlet received from the sales of A and B are in the ratio 5 : 9.
4. The outlet received 88000 units of L by selling A during the day.
5. The outlet started the day with some amount of L, 2500 units of A, 4800 units of B, and 48000 units of C.
6. The outlet ended the day with some amount of L, 3300 units of A, 4800 units of B, and 51000 units of C.

What was the base exchange rate of currency B with respect to currency L on that day?

cat2018-2 logical-reasoning logic-puzzles numerical-answer

### 2.24.30 Numerical Answer: CAT 2018 Set-2 | Question: 51 top

Fun Sports (FS) provides training in three sports-Gilli-danda (G), Kho-Kho (K), and Ludo (L). Currently it has an enrollment of 39 students each of whom is enrolled in at least one of the three sports. The following details are known:

1. The number of students enrolled only in L is double the number of students enrolled in all the three sports.
2. There are a total of 17 students enrolled in G.
3. The number of students enrolled only in G is one less than the number of students enrolled only in L.
4. The number of students enrolled only in K is cqual to the number of students who are enrolled in both K and L
5. The maximum student enrollment is in L.
6. Ten students enrolled in G are also enrolled in at least one more sport.

What is the minimum number of students enrolled in both G and L but not in K?

cat2018-2 logical-reasoning logic-puzzles numerical-answer

### 2.24.31 Numerical Answer: CAT 2018 Set-2 | Question: 53 top

Fun Sports (FS) provides training in three sports-Gilli-danda (G), Kho-Kho (K), and Ludo (L). Currently it has an enrollment of 39 students each of whom is enrolled in at least one of the three sports. The following details are known:

1. The number of students enrolled only in L is double the number of students enrolled in all the three sports.
2. There are a total of 17 students enrolled in G.
3. The number of students enrolled only in G is one less than the number of students enrolled only in L.
4. The number of students enrolled only in K is cqual to the number of students who are enrolled in both K and L
5. The maximum student enrollment is in L.
6. Ten students enrolled in G are also enrolled in at least one more sport.

Due to academic pressure, students who were enrolled in all three sports were asked to withdraw from one of the three sports. After the withdrawal, the number of students enrolled in G was six less than the number of students enrolled in L, while the number of students enrolled in K went down by one. After the withdrawal, how many students were enrolled in both G and K?

### 2.24.32 Numerical Answer: CAT 2018 Set-2 | Question: 64 top

Each visitor to an amusement park needs to buy a ticket. Tickets can be Platinum, Gold, or Economy. Visitors are classified as Old, Middle-aged, or Young. The following facts are known about visitors and ticket sales on a particular day:

1. 140 tickets were sold.
2. The number of Middle-aged visitors was twice the number of Old visitors, while the number of Young visitors was twice the number of Middle-aged visitors.
3. Young visitors bought 38 of the 55 Economy tickets that were sold, and they bought half the total number of Platinum tickets that were sold.
4. The number of Gold tickets bought by Old visitors was equal to the number of Economy tickets bought by Old visitors.

If the number of Old visitors buying Platinum tickets was equal to the number of Middle-aged visitors buying Economy tickets, then the number of Old visitors buying Gold tickets was _____

cat2018-2 logical-reasoning logic-puzzles numerical-answer

## 2.24.33 Numerical Answer: CAT 2018 Set-2 | Question: 65 top

Each visitor to an amusement park needs to buy a ticket. Tickets can be Platinum, Gold, or Economy. Visitors are classified as Old, Middle-aged, or Young. The following facts are known about visitors and ticket sales on a particular day:

1. 140 tickets were sold.
2. The number of Middle-aged visitors was twice the number of Old visitors, while the number of Young visitors was twice the number of Middle-aged visitors.
3. Young visitors bought 38 of the 55 Economy tickets that were sold, and they bought half the total number of Platinum tickets that were sold.
4. The number of Gold tickets bought by Old visitors was equal to the number of Economy tickets bought by Old visitors.

If the number of Old visitors buying Gold tickets was strickly greater that the number of Young visitors buying Gold tickets, then the number of Middle-aged visitors buying Gold tickets was _____

## 2.24.38 Numerical Answer: CAT 2019 Set-1 | Question: 59 top

A new game show on TV has 100 boxes numbered 1, 2…, 100 in a row, each containing a mystery prize. The prizes are items of different types $a, b, c, \ldots,$ in decreasing order of value. The most expensive item is of type a, a diamond ring, and there is exactly one of these. You are told that the number of items at least doubles as you move to the next type. For example, there would be at least twice as many items of type b as of type a, at least type a, at least twice as many items of type c as of type b and so on. There is no particular order in which the prizes are placed in the boxes.

What is the minimum possible number of different types of prizes _____

cat2019-1 logical-reasoning logic-puzzles numerical-answer

cat2019-1 logical-reasoning logic-puzzles numerical-answer

## 2.24.40 Numerical Answer: CAT 2019 Set-2 | Question: 43 top

Students in a college are discussing two proposals --
A : a proposal by the authorities to introduce dress code on campus, and
B : a proposal by the students to allow multinational food franchises to set up outlets on college campus.
A student does not necessarily support either of the two proposals.

In an upcoming election for student union president, there are two candidates in fray: Sunita and Ragini. Every student prefers one of the two candidates.
A survey was conducted among the students by picking a sample of 500 students.

The following information was noted from this survey.
1. 250 students supported proposal A and 250 students supported proposal B.
2. Among the 200 students who preferred Sunita as student union president, 80% supported proposal A.
3. Among those who preferred Ragini, 30% supported proposal A.
4.20% of those who supported proposal B preferred Sunita.
5. 40% of those who did not support proposal B preferred Ragini.
6. Every student who preferred Sunita and supported proposal B also supported proposal A.
7. Among those who preferred Ragini, 20% did not support any of the proposals.

Among the students surveyed who supported proposal A, what percentage preferred Sunita for student union president _____

cat2019-2 logical-reasoning logic-puzzles numerical-answer

## 2.24.41 Numerical Answer: CAT 2019 Set-2 | Question: 44 top

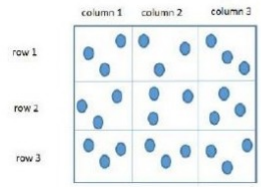
What percentage of the students surveyed who did not support proposal A preferred Ragini as student union president _____

cat2019-2 logical-reasoning logic-puzzles numerical-answer

## 2.24.42 Numerical Answer: CAT 2019 Set-2 | Question: 59 top



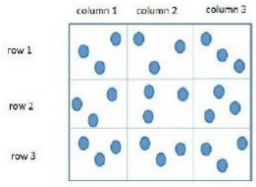
| | Column 1 | Column 2 | Column 3 |
|---|---|---|---|
| Row 1 | (2,4) | (6, 8) | (1, 3) |
| Row 2 | (3,5) | (1,1) | (6, 20) |
| Row 3 | (1,2) | (1,2) | (2,5) |

Three pouches (each represented by a filled circle) are kept in each of the nine slots in a $3 \times 3$ grid, as shown in the figure. Every pouch has a certain number of one-rupee coins. The minimum and maximum amounts of money (in rupees) among the three pouches in each of the nine slots are given in the table. For example, we know that among the three pouches kept in the second column of the first row, the minimum amount in a pouch is Rs. 6 and the maximum amount is Rs. 8.
There are nine pouches in any of the three columns, as well as in any of the three rows. It is known that the average amount of money (in rupees) kept in the nine pouches in any column or in any row is an integer. It is also known that the total amount of money kept in the three pouches in the first column of the third row is Rs. 4.

What is the total amount of money (in rupees) in the three pouches kept in the first column of the second row _____

cat2019-2 logical-reasoning logic-puzzles numerical-answer

## 2.24.43 Numerical Answer: CAT 2019 Set-2 | Question: 60 top



| | Column 1 | Column 2 | Column 3 |
|---|---|---|---|
| Row 1 | (2,4) | (6, 8) | (1, 3) |
| Row 2 | (3,5) | (1,1) | (6, 20) |
| Row 3 | (1,2) | (1,2) | (2,5) |

Three pouches (each represented by a filled circle) are kept in each of the nine slots in a $3 \times 3$ grid, as shown in the figure. Every pouch has a certain number of one-rupee coins. It is known that the average amount of money (in rupees) kept in the nine pouches in any column or in any row is an integer. It is also known that the total amount of money kept in the three pouches in the first column of the third row is Rs. 4.

The number of slots for which the total amount in its three pouches strictly exceeds Rs. 10 is_____

cat2019-2 logical-reasoning logic-puzzles numerical-answer

## 2.24.46 Numerical Answer: CAT 2020 Set-1 | Question: 45 top

In a certain board examination, students were to appear for examination in five subjects: English, Hindi, Mathematics, Science, and Social Science. Due to a certain emergency situation, a few of the examinations could not be conducted for some students.

Hence, some students missed one examination and others missed two examinations. Nobody missed more than two examinations.

The board adopted the following policy for awarding marks to students. If a student appeared in all five examinations, then the marks awarded in each of the examinations were on the basis of the scores obtained by them in those examinations.

If a student missed only one examination, then the marks awarded in that examination was the average of the best three among the four scores in the examinations they appeared for.

If a student missed two examinations, then the marks awarded in each of these examinations was the average of the best two among the three scores in the examinations they appeared for.

The marks obtained by six students in the examinations are given in the table below. Each of them missed either one or two examinations.

| | English | Hindi | Mathematics | Science | Social Science |
|---|---|---|---|---|---|
| Alva | 80 | 75 | 70 | 75 | 60 |
| Bithi | 90 | 80 | 55 | 85 | 85 |
| Carl | 75 | 80 | 90 | 100 | 90 |
| Deep | 70 | 90 | 100 | 90 | 80 |
| Esha | 80 | 85 | 95 | 60 | 55 |
| Foni | 83 | 72 | 78 | 88 | 83 |

The following facts are also known.

I. Four of these students appeared in each of the English, Hindi, Science, and Social Science examinations.
II. The student who missed Mathematics examination did not miss any other examination.
III. One of the students who missed the Hindi examination did not miss any other examination. The other student who missed the Hindi examination also missed the Science examination.

How many out of these six students missed exactly one examination?

cat2020-set1 logical-reasoning logic-puzzles numerical-answer

## 2.24.47 Numerical Answer: CAT 2020 Set-1 | Question: 46 top

In a certain board examination, students were to appear for examination in five subjects: English, Hindi, Mathematics, Science, and Social Science. Due to a certain emergency situation, a few of the examinations could not be conducted for some students. Hence, some students missed one examination and others missed two examinations. For how many students can we be definite about which examinations they missed?

cat2020-set1 logical-reasoning logic-puzzles numerical-answer

## 2.24.48 Numerical Answer: CAT 2020 Set-1 | Question: 47 top

1000 patients currently suffering from a disease were selected to study the effectiveness of treatment of four types of medicines -A, B, C and D. These patients were first randomly assigned into two groups of equal size, called treatment group and control group. The patients in the control group were not treated with any of these medicines; instead they were given a dummy medicine, called placebo, containing only sugar and starch. The following information is known about the patients in the treatment group.

a. A total of 250 patients were treated with type A medicine and a total of 210 patients were treated with type C medicine.
b. 25 patients were treated with type A medicine only. 20 patients were treated with type C medicine only. 10 patients were treated with type D medicine only.
c. 35 patients were treated with type A and type D medicines only. 20 patients were treated with type A and type B medicines only. 30 patients were treated with type A and type C medicines only. 20 patients were treated with type C and type D medicines only.
d. 100 patients were treated with exactly three types of medicines.
e. 40 patients were treated with medicines of types A, B and C, but not with medicines of type D. 20 patients were treated with medicines of types A, C and D, but not with medicines of type B.
f. 50 patients were given all the four types of medicines. 75 patients were treated with exactly one type of medicine.

How many patients were treated with medicine type B?

cat2020-set1 logical-reasoning logic-puzzles numerical-answer

## 2.24.49 Numerical Answer: CAT 2020 Set-1 | Question: 48 top

1000 patients currently suffering from a disease were selected to study the effectiveness of treatment of four types of medicines -A, B, C and D. iii. There is at least one Blue and at least one Green bead between any two Red beads along the same row or column.

Every unique, complete arrangement of twenty five beads is called a configuration.

What is the minimum number of Blue beads in any configuration ?

cat2020-set2 logical-reasoning logic-puzzles numerical-answer

## 2.24.55 Numerical Answer: CAT 2020 Set-2 | Question: 30 top

Twenty five coloured beads are to be arranged in a grid comprising of five rows and five columns. Each cell in the gride must contain exactly one bead. Each bead is coloured either Red, Blue or Green.

While arranging the beads along any of the five rows or along any of the five columns, the rules given below are to be followed :

i. Two adjacent beads along the same row or column are always of different colours.
ii. There is at least one Green bead between any two Blue beads along the same row or column.
iii. There is at least one Blue and at least one Green bead between any two Red beads along the same row or column.

Every unique, complete arrangement of twenty five beads is called a configuration.

Two Red beads have been placed in 'second row, third column' and 'third row, second column'. How many more Red beads can be placed so as to maximise the number of Red beads used in the configuration ?

cat2020-set2 logical-reasoning logic-puzzles numerical-answer

## 2.24.56 Numerical Answer: CAT 2020 Set-2 | Question: 45 top

In an election several candidates contested for a constituency. In any constituency, the winning candidate was the one who polled the highest number of votes, the first runner up was the one who polled the second highest number of votes, the second runner up was the one who polled the third highest number of votes, and so on. There were no ties (in terms of number of votes polled by the candidates) in any of the constituencies in this election.

In an electoral system, a security deposit is the sum of money that a candidate is required to pay to the election commission before he or she is permitted to contest. Only the defeated candidates (i.e., one who is not the winning candidate) who fail to secure more than one sixth of the valid votes polled in the constituency, lose their security deposits.

The following table provides some incomplete information about votes polled in four constituencies: A, B, C and D, in this election.

| | Constituency | | | |
|---|---|---|---|---|
| | A | B | C | D |
| No. of candidates contesting | 10 | 12 | 5 | 8 |
| Total No. of valid votes polled | 5,00,000 | 3,25,000 | 6,00,030 | |
| No. of votes polled by the winning candidate | 2,75,000 | 48,750 | | |
| No. of votes polled by the first runner up | 95,000 | | | 37,500 |
| No. of votes polled by the second runner up | | | | 30,000 |
| % of valid votes polled by the third runner up | | | | 10% |

The following additional facts are known:

1. The first runner up polled $10,000$ more votes than the second runner up in constituency A.
2. None of the candidates who contested in constituency C lost their security deposit. The difference in votes polled by any pair of candidates in this constituency was at least $10,000$.
3. The winning candidate in constituency D polled 5% of valid votes more than that of the first runner up. All the candidates who lost their security deposits while contesting for this constituency, put together, polled 35% of the valid votes.

What is the percentage of votes polled in total by all the candidates who lost their security deposits while contesting for constituency A?

cat2020-set2 logical-reasoning logic-puzzles numerical-answer

## 2.24.57 Numerical Answer: CAT 2020 Set-2 | Question: 46 top

In an election several candidates contested for a constituency. In any constituency, the winning candidate was the one who polled the highest number of votes, the first runner up was the one who polled the second highest number of votes, the second runner up was the one who polled the third highest number of votes, and so on. There were no ties (in terms of number of votes polled by the candidates) in any of the constituencies in this election.

In an electoral system, a security deposit is the sum of money that a candidate is required to pay to the election commission before he or she is permitted to contest. Only the defeated candidates (i.e., one who is not the winning candidate) who fail to secure more than one sixth of the valid votes polled in the constituency, lose their security deposits.

The following table provides some incomplete information about votes polled in four constituencies: A, B, C and D, in this election.

| | Constituency | | | |
|---|---|---|---|---|
| | A | B | C | D |
| No. of candidates contesting | 10 | 12 | 5 | 8 |
| Total No. of valid votes polled | 5,00,000 | 3,25,000 | 6,00,030 | |
| No. of votes polled by the winning candidate | 2,75,000 | 48,750 | | |
| No. of votes polled by the first runner up | 95,000 | | | 37,500 |
| No. of votes polled by the second runner up | | | | 30,000 |
| % of valid votes polled by the third runner up | | | | 10% |

The following additional facts are known:

1. The first runner up polled $10,000$ more votes than the second runner up in constituency A.
2. None of the candidates who contested in constituency C lost their security deposit. The difference in votes polled by any pair of candidates in this constituency was at least $10,000$.
3. The winning candidate in constituency D polled 5% of valid votes more than that of the first runner up. All the candidates who lost their security deposits while contesting for this constituency, put together, polled 35% of the valid votes.

How many candidates who contested in constituency B lost their security deposit ?

## 2.24.58 Numerical Answer: CAT 2020 Set-3 | Question: 28 top

The Hi-Lo game is a four-player game played in six rounds. In every round, each player chooses to bid Hi or Lo. The bids are made simultaneously. If all four bid Hi, then all four lose 1 point each. If three players bid Hi and one bids Lo, then the players bidding Hi gain 1 point each and the player bidding Lo loses 3 points. If two players bid Hi and two bid Lo, then the players bidding Hi gain 2 points each and the players bidding Lo lose 2 points each. If one player bids Hi and three bid Lo, then the player bidding Hi gains 3 points and the players bidding Lo lose 1 point each. If all four bid Lo, then all four gain 1 point each.

Four players Arun, Bankim, Charu, and Dipak played the Hi-Lo game. the following facts are known about their game:

1. At the end of three rounds, Arun had scored 6 points, Dipak had scored 2 points, Bankim and Charu had scored $-2$ points each.
2. At the end of six rounds, Arun had scored 7 points, Bankim and Dipak had scored $-1$ point each, and Charu had scored $-5$ points.
3. Dipak's score in the third round was less than his score in the first round but was more than his score in the second round.
4. In exactly two out of the six rounds, Arun was the only player who bid Hi.

In how many rounds did Arun bid Hi ?

cat2020-set3 logical-reasoning logic-puzzles numerical-answer

## 2.24.59 Numerical Answer: CAT 2020 Set-3 | Question: 29 top

The Hi-Lo game is a four-player game played in six rounds. In every round, each player chooses to bid Hi or Lo. The bids are made simultaneously. If all four bid Hi, then all four lose 1 point each. If three players bid Hi and one bids Lo, then the players bidding Hi gain 1 point each and the player bidding Lo loses 3 points. If two players bid Hi and two bid Lo, then the players bidding Hi gain 2 points each and the players bidding Lo lose 2 points each. ## 2.24.62 Numerical Answer: CAT 2020 Set-3 | Question: 35 top

A survey of 600 schools in India was conducted to gather information about their online teaching learning processes (OTLP). The following four facilities were studied.

F1: Own software for OTLP

F2: Trained teachers for OTLP

F3: Training materials for OTLP

F4: All students having Laptops

The following observations were summarized from the survey.

1. 80 schools did not have any of the four facilities – F1, F2, F3, F4.
2. 40 schools had all four facilities.
3. The number of schools with only F1, only F2, only F3, and only F4 was 25, 30, 26 and 20 respectively.
4. The number of schools with exactly three of the facilities was the same irrespective of which three were considered.
5. 313 schools had F2.
6. 26 schools had only F2 and F3 (but neither F1 nor F4).
7. Among the schools having F4, 24 had only F3, and 45 had only F2.
8. 162 schools had both F1 and F2.
9. The number of schools having F1 was the same as the number of schools having F4.

What was the number of schools having only facilities F1 and F3?

cat2020-set3 logical-reasoning logic-puzzles numerical-answer

## 2.24.63 Numerical Answer: CAT 2020 Set-3 | Question: 36 top

## 2.24.64 Numerical Answer: CAT 2021 Set-1 | Data Interpretation and Logical Reasoning | Question: 10 top

A journal plans to publish 18 research papers, written by eight authors (A, B, C, D, E, F, G, and H) in four issues of the journal scheduled in January, April, July and October. Each of the research papers was written by exactly one of the eight authors. Five papers were scheduled in each of the first two issues, while four were scheduled in each of the last two issues. Every author wrote at least one paper and at most three papers. The total number of papers written by A, D, G and H was double the total number of papers written by the other four authors. Four of the authors were from India and two each were from Japan and China. Each author belonged to exactly one of the three areas – Manufacturing, Automation and Logistics. Four of the authors were from the Logistics area and two were from the Automation area. As per the journal policy, none of the authors could have more than one paper in any issue of the journal.

The following facts are also known.

1. F, an Indian author from the Logistics area, wrote only one paper. It was scheduled in the October issue.
2. A was from the Automation area and did not have a paper scheduled in the October issue.
3. None of the Indian authors were from the Manufacturing area and none of the Japanese or Chinese authors were from the Automation area.
4. A and H were from different countries, but had their papers scheduled in exactly the same issues.

5. C and E, both Chinese authors from different areas, had the same number of papers scheduled. Further, E had papers scheduled in consecutive issues of the journal but C did not.
6. B, from the Logistics area, had a paper scheduled in the April issue of the journal.
7. B and G belonged to the same country. None of their papers were scheduled in the same issue of the journal.
8. D, a Japanese author from the Manufacturing area, did not have a paper scheduled in the July issue.
9. C and H belonged to different areas.

How many papers were written by Indian authors ?

## 2.24.65 Numerical Answer: CAT 2021 Set-1 | Data Interpretation and Logical Reasoning | Question: 19 top

Amudha, Bharatan, Chandran, Dhinesh, Ezhil, Fani and Gowtham are seven people in a town. Any pair of them could either be strangers, acquaintances, or friends. All relationships are mutual. For example, if Amudha is a friend of Bharatan, then Bharatan is also a friend of Amudha. Similarly, if Amudha is a stranger to Bharatan, then Bharatan is also a stranger to Amudha.

Partial information about the number of friends, acquaintances, and strangers of each of these people among them is given in the table below.

| | No. of Friends | No. of Acquaintances | No. of Strangers |
|---|---|---|---|
| Amudha | | 1 | 4 |
| Bharatan | | | |
| Chandran | | 1 | |
| Dhinesh | | | 2 |
| Ezhil | | | 1 |
| Fani | 1 | | |
| Gowtham | | 3 | 2 |

The following additional facts are also known.

1. Amudha, Bharatan, and Chandran are mutual strangers.
2. Amudha, Dhinesh, and Fani are Ezil's friends.
3. Chandran and Gowtham are friends.
4. Every friend of Amudha is an acquaintance of Bharatan, and every acquaintance of Bharatan is a friend of Amudha.
5. Every friend of Bharatan is an acquaintance of Amudha, and every acquaintance of Amudha is a friend of Bharatan.

How many friends does Ezhil have ?

cat2021-set1 logical-reasoning logic-puzzles numerical-answer

## 2.24.66 Numerical Answer: CAT 2021 Set-1 | Data Interpretation and Logical Reasoning | Question: 20 top

Amudha, Bharatan, Chandran, Dhinesh, Ezhil, Fani and Gowtham are seven people in a town. Any pair of them could either be strangers, acquaintances, or friends. All relationships are mutual. For example, if Amudha is a friend of Bharatan, then Bharatan is also a friend of Amudha. Similarly, if Amudha is a stranger to Bharatan, then Bharatan is also a stranger to Amudha.

Partial information about the number of friends, acquaintances, and strangers of each of these people among them is given in the table below.

| | No. of Friends | No. of Acquaintances | No. of Strangers |
|---|---|---|---|
| Amudha | | 1 | 4 |
| Bharatan | | | |
| Chandran | | 1 | |
| Dhinesh | | | 2 |
| Ezhil | | | 1 |
| Fani | 1 | | |
| Gowtham | | 3 | 2 |

The following additional facts are also known.

1. Amudha, Bharatan, and Chandran are mutual strangers.
2. Amudha, Dhinesh, and Fani are Ezil's friends.
3. Chandran and Gowtham are friends.
4. Every friend of Amudha is an acquaintance of Bharatan, and every acquaintance of Bharatan is a friend of Amudha.
5. Every friend of Bharatan is an acquaintance of Amudha, and every acquaintance of Amudha is a friend of Bharatan.

How many people are either a friend or a friend-of-a-friend of Ezhil?

cat2021-set1 logical-reasoning logic-puzzles numerical-answer

## 2.24.67 Numerical Answer: CAT 2021 Set-1 | Data Interpretation and Logical Reasoning | Question: 8 top

Ganga, Kaveri, and Narmada are three women who buy four raw materials (Mango, Apple, Banana and Milk) and sell five finished products (Mango smoothie, Apple smoothie, Banana smoothie, Mixed fruit smoothie and Fruit salad). Table-1 gives information about the raw materials required to produce the five finished products. One unit of a finished product requires one unit of each of the raw materials mentioned in the second column of the table.

**Table-1**

| Finished product | Raw materials required |
|---|---|
| Mango smoothie | Mango, Milk |
| Apple smoothie | Apple, Milk |
| Banana smoothie | Banana, Milk |
| Mixed fruit smoothie | Mango, Apple, Banana, Milk |
| Fruit salad | Mango, Apple, Banana |

One unit of milk, mango, apple, and banana cost ₹5, ₹3, ₹2, and ₹1 respectively. Each unit of a finished product is sold for a profit equal to two times the number of raw materials used to make that product. For example, apple smoothie is made with two raw materials (apple and milk) and will be sold for a profit of ₹4 per unit. Leftover raw materials are sold during the last business hour of the day for a loss of ₹1 per unit.

The amount, in rupees, receives from sales (revenue) for each woman in each of the four business hours of the day is given in Table-2.

**Table-2**

| Business Hour | Ganga | Kaveri | Narmada |
|---|---|---|---|
| Hour 1 | 23 | 19 | 31 |
| Hour 2 | 21 | 22 | 21 |
| Hour 3 | 29 | 30 | 23 |
| Hour 4 (last hour) | 30 | 27 | 22 |

The following additional facts are known.

1. No one except possibly Ganga sold any Mango smoothie.
2. Each woman sold either zero or one unit of any single finished product in any hour.
3. Each woman had exactly one unit each of two different raw materials as leftovers.
4. No one had any banana leftover.

If it is known that three leftover units of mangoes were sold during the last business hour of the day, how many apple smoothies were sold during the day?

cat2021-set1 logical-reasoning logic-puzzles numerical-answer

## 2.24.68 Numerical Answer: CAT 2021 Set-2 | Data Interpretation and Logical Reasoning | Question: 17 top

Ten objects o1, o2,…, o10 were distributed among Amar, Barat, Charles, Disha, and Elise. Each item went to exactly one person. Each person got exactly two of the items, and this pair of objects is called her/his bundle.

The following table shows how each person values each object.

| | o1 | o2 | o3 | o4 | o5 | o6 | o7 | o8 | o9 | o10 |
|---|---|---|---|---|---|---|---|---|---|---|
| **Amar** | 4 | 9 | 9 | 3 | 7 | 3 | 8 | 7 | 9 | 5 |
| **Barat** | 5 | 9 | 7 | 5 | 5 | 3 | 6 | 8 | 10 | 8 |
| **Charles** | 8 | 8 | 8 | 3 | 6 | 4 | 5 | 8 | 9 | 6 |
| **Disha** | 8 | 8 | 8 | 5 | 5 | 3 | 6 | 4 | 9 | 8 |
| **Elise** | 6 | 8 | 9 | 5 | 6 | 5 | 6 | 3 | 7 | 10 |

The value of any bundle by a person is the sum of that person's values of the objects in that bundle. A person X envies another person Y if X values Y's bundle more than X's own bundle.

For example, hypothetically suppose Amar's bundle consists of o1 and o2, and Barat's bundle consists of o3 and o4. Then Amar values his own bundle at $4 + 9 = 13$ and Barat's bundle at $9 + 3 = 12$. Hence Amar does not envy Barat. On the other hand, Barat values his own bundle at $7 + 5 = 12$ and Amar's bundle at $5 + 9 = 14$. Hence Barat envies Amar.

The following facts are known about the actual distribution of the objects among the five people.

1. If someone's value for an object is 10, then she/he received that object.
2. Objects o1, o2, and o3 were given to three different people.
3. Objects o1 and o8 were given to different people.
4. Three people value their own bundles at 16. No one values her/his own bundle at a number higher than 16.
5. Disha values her own bundle at an odd number. All others value their own bundles at an even number.
6. Some people who value their own bundles less than 16 envy some other people who value their own bundle at 16. No one else envies others.

What is Amar's value for his own bundle?

cat2021-set2 logical-reasoning logic-puzzles numerical-answer

## 2.24.69 Numerical Answer: CAT 2021 Set-2 | Data Interpretation and Logical Reasoning | Question: 5 top

Ravi works in an online food-delivery company. After each delivery, customers rate Ravi on each of four parameters – Behaviour, Packaging, Hygiene, and Timeliness, on a scale from 1 to 9. If the total of the four rating points is 25 or more, then Ravi gets a bonus of ₹20 for that delivery. Additionally, a customer may or may not give Ravi a tip. If the customer gives a tip, it is either ₹30 or ₹50.

One day, Ravi made four deliveries – one to each of Atal, Bihari, Chirag and Deepak, and receives a total of ₹120 in bonus and tips. He did not get both a bonus and a tip from the same customer.

The following additional facts are also known.

1. In Timeliness, Ravi received a total of 21 points, and three of the customers gave him the same rating points in this parameter. Atal gave higher rating points than Bihari and Chirag in this parameter.
2. Ravi received distinct rating points in Packaging from the four customers adding up to 29 points. Similarly, Ravi received distinct rating points in Hygiene from the four customers adding up to 26 points.
3. Chirag gave the same rating points for Packaging and Hygiene.
4. Among the four customers, Bihari gave the highest rating points in Packaging, and Chirag gave the highest rating points in Hygiene.
5. Everyone rated Ravi between 5 and 7 in Behaviour. Unique maximum and minimum ratings in this parameter were given by Atal and Deepak respectively.
6. If the customers are ranked based on ratings given by them in individual parameters, then Atal's rank based on Packaging is the same as that based on Hygiene. This is also true for Deepak.

What was the minimum rating that Ravi received from any customer in any parameter?

cat2021-set2 logical-reasoning logic-puzzles numerical-answer

## 2.24.70 Numerical Answer: CAT 2021 Set-2 | Data Interpretation and Logical Reasoning | Question: 7 top

What rating did Atal give on Timeliness?

cat2021-set2 logical-reasoning logic-puzzles numerical-answer

## 2.24.71 Numerical Answer: CAT 2021 Set-3 | Data Interpretation and Logical Reasoning | Question: 11 top

Three reviewers Amal, Bimal, and Komal are tasked with selecting questions from a pool of 13 questions (Q01 to Q13). Questions can be created by external "subject matter experts" (SMEs) or by one of the three reviewers. Each of the reviewers either approves or disapproves a question that is shown to them. Their decisions lead to eventual acceptance or rejection of the question in the manner described below.

If a question is created by an SME, it is reviewed first by Amal, and then by Bimal. If both of them approve the question, then the question is accepted and is not reviewed by Komal. If both disapprove the question, it is rejected and is not reviewed by Komal. If one of them approves the question and the other disapproves it, then the question is reviewed by Komal. Then the question is accepted only if she approves it.

A question created by one of the reviewers is decided upon by the other two. If a question is created by Amal, then it is first reviewed by Bimal. If Bimal approves the question, then it is accepted. Otherwise, it is reviewed by Komal. The question is then accepted only if Komal approves it. A similar process is followed for questions created by Bimal, whose questions are first reviewed by Komal, and then by Amal only if Komal disapproves it. Questions created by Komal are first reviewed by Amal, and then, if required, by Bimal.

The following facts are known about the review process after its completion.

1. Q02, Q06, Q09, Q11, and Q12 were rejected and the other questions were accepted.
2. Amal reviewed only Q02, Q03, Q04, Q06, Q08, Q10, Q11, and Q13.
3. Bimal reviewed only Q02, Q04, Q06 through Q09, Q12, and Q13.
4. Komal reviewed only Q01 through Q05, Q07, Q08, Q09, Q11, and Q12.

How many questions were DEFINITELY created by Amal?

cat2021-set3 logical-reasoning passage-reading numerical-answer

## 2.24.72 Numerical Answer: CAT 2021 Set-3 | Data Interpretation and Logical Reasoning | Question: 12 top

The following facts are known about the review process after its completion.

1. Q02, Q06, Q09, Q11, and Q12 were rejected and the other questions were accepted.
2. Amal reviewed only Q02, Q03, Q04, Q06, Q08, Q10, Q11, and Q13.
3. Bimal reviewed only Q02, Q04, Q06 through Q09, Q12, and Q13.
4. Komal reviewed only Q01 through Q05, Q07, Q08, Q09, Q11, and Q12.

How many questions were DEFINITELY created by Komal?

cat2021-set3 logical-reasoning passage-reading numerical-answer

## 2.24.73 Numerical Answer: CAT 2021 Set-3 | Data Interpretation and Logical Reasoning | Question: 13 top

Three reviewers Amal, Bimal, and Komal are tasked with selecting questions from a pool of 13 questions (Q01 to Q13). Questions can be created by external "subject matter experts" (SMEs) or by one of the three reviewers. Each of the reviewers either approves or disapproves a question that is shown to them. Their decisions lead to eventual acceptance or rejection of the question in the manner described below.

If a question is created by an SME, it is reviewed first by Amal, and then by Bimal. If both of them approve the question, then the question is accepted and is not reviewed by Komal. If both disapprove the question, it is rejected and is not reviewed by Komal. If one of them approves the question and the other disapproves it, then the question is reviewed by Komal. Then the question is accepted only if she approves it.

A question created by one of the reviewers is decided upon by the other two. If a question is created by Amal, then it is first reviewed by Bimal. If Bimal approves the question, then it is accepted. Otherwise, it is reviewed by Komal. The question is then accepted only if Komal approves it. A similar process is followed for questions created by Bimal, whose questions are first reviewed by Komal, and then by Amal only if Komal disapproves it. Questions created by Komal are first reviewed by Amal, and then, if required, by Bimal.

The following facts are known about the review process after its completion.

1. Q02, Q06, Q09, Q11, and Q12 were rejected and the other questions were accepted.
2. Amal reviewed only Q02, Q03, Q04, Q06, Q08, Q10, Q11, and Q13.
3. Bimal reviewed only Q02, Q04, Q06 through Q09, Q12, and Q13.
4. Komal reviewed only Q01 through Q05, Q07, Q08, Q09, Q11, and Q12.

How many questions were DEFINITELY created by the SMEs?

cat2021-set3 logical-reasoning passage-reading numerical-answer

## 2.24.74 Numerical Answer: CAT 2021 Set-3 | Data Interpretation and Logical Reasoning | Question: 18 top

Each of the bottles mentioned in this question contains 50 ml of liquid. The liquid in any bottle can be 100% pure content (P) or can have certain amount of impurity (I). Visually it is not possible to distinguish between P and I. There is a testing device which detects impurity, as long as the percentage of impurity in the content tested is 10% or more.

For example, suppose bottle 1 contains only P, and bottle 2 contains 80% P and 20% I. If content from bottle 1 is tested, it will be found out that it contains only P. If content of bottle 2 is tested, the test will reveal that it contains some amount of I. If 10 ml of content from bottle 1 is mixed with 20 ml content from bottle 2, the test will show that the mixture has impurity, and hence we can conclude that at least one of the two bottles has I. However, if 10 ml of content from bottle 1 is mixed with 5 ml of content from bottle 2. the test will not detect any impurity in the resultant mixture.

There are four bottles. Each bottle is known to contain only P or only I. They will be considered to be "collectively ready for despatch" if all of them contain only P. In minimum how many tests, is it possible to ascertain whether these four bottles are "collectively ready for despatch"?

cat2021-set3 logical-reasoning logic-puzzles numerical-answer

## 2.24.75 Numerical Answer: CAT 2021 Set-3 | Data Interpretation and Logical Reasoning | Question: 19 top

Each of the bottles mentioned in this question contains 50 ml of liquid. The liquid in any bottle can be 100% pure content (P) or can have certain amount of impurity (I). Visually it is not possible to distinguish between P and I. There is a testing device which detects impurity, as long as the percentage of impurity in the content tested is 10% or more.

For example, suppose bottle 1 contains only P, and bottle 2 contains 80% P and 20% I. If content of bottle 1 is tested, it will be found out that it contains only P. If content of bottle 2 is tested, the test will reveal that it contains some amount of I. If 10 ml of content from bottle 1 is mixed with 20 ml content from bottle 2, the test will show that the mixture has impurity, and hence we can conclude that at least one of the two bottles has I. However, if 10 ml of content from bottle 1 is mixed with 5 ml of content from bottle 2. the test will not detect any impurity in the resultant mixture.

There are four bottles. It is known that three of these bottles contain only P, while the remaining one contains 80%P and 20%I. What is the minimum number of tests required to definitely identify the bottle containing some amount of I?

## 2.27 Passage Reading (33) top

### 2.27.1 Passage Reading: CAT 2005 | Question: 49 top

The following question has a paragraph from which the last sentence has been deleted. From the options given choose the one that completes paragraph in most appropriate way.

The audiences for crossword and Sudoku, understandably, overlap greatly, but there are differences too. A crossword attract mote literacy person, while Sudoku appears to a keenly logical mind. Some crosswords enthusiasts turn up their noses at Sudoku because they feel it lacks depth. A good crossword requires vocabulary, knowledge, mental flexibility and sometime even a sense of humor to complete it. It touches numerous areas of life and provides an "Aha!" or two long the way.

A. Sudoku, on the other hand, is just a logical exercise, each one similar to the last.
B. Sudoku, incidentally, is growing faster in popularity than crosswords, even among the literati.
C. Sudoku, on the other hand, can be attempted and enjoyed even by children.
D. Sudoku, however, is not exciting in any sense of term.

cat2005 verbal-ability passage-reading

### 2.27.2 Passage Reading: CAT 2005 | Question: 50 top

The following question has a paragraph from which the last sentence has been deleted. From the options given choose the one that completes paragraph in most appropriate way.

Most firms consider expert individuals to be too elitist, temperamental, egocentric and difficult to work with. Force such people to collaborate on a high-stakes project and they just might come to fisticuffs. Even the very notion of managing such a group seems unimaginable. So most organizations fall into default mode, setting up project teams of people who get along nicely.

A. The result, however, is disastrous.
B. The result is mediocrity.
C. The result is the creation of experts who then become elitists.
D. Naturally they drive innovations

cat2005 verbal-ability passage-reading

### 2.27.3 Passage Reading: CAT 2005 | Question: 51 top

The following question has a paragraph from which the last sentence has been deleted. From the options given choose the one that completes paragraph in most appropriate way.

Federer's fifth grand slam win prompted a reporter to ask whether he was the best ever. Federer is certainly not lacking in confidence, but he was not about to proclaim himself the best ever. "The best player of this generation, yes", he said, "But nowhere close to ever. Just look at the records that some guys have. I am a minnow".

A. His win against Agassi, a genius from the previous generation, contradicts that.
B. Sampras, the king of an earlier generation, was as humble.
C. He is more than a minnow to his contemporaries.
D. The difference between "the best of this generation" and the "best ever" is a matter of perception.

cat2005 verbal-ability passage-reading

### 2.27.4 Passage Reading: CAT 2005 | Question: 52 top

The following question has a paragraph from which the last sentence has been deleted. From the options given choose the one that completes paragraph in most appropriate way.

Thus the end of knowledge and the closing of the frontier that it symbolizes is not a looming crisis at all, but merely one of many embarrassing fits of hubris in civilization's long industry. In the end, it will pass away and be forgotten. Ours is not the first generation to struggle to understand the organizational laws of the frontier, deceive itself that it has succeeded, and go to its grave having failed.

A. One would be wise to be humble.
B. But we might be the first generation to actually reach the frontier.
C. But we might be the first generation to deal with the crisis.
D. However, this time the success is not illusory.

cat2005 verbal-ability passage-reading

### 2.27.5 Passage Reading: CAT 2006 | Question: 31 top

The following paragraph from which the last sentence has been deleted. From the given options, choose the one that completes the paragraph in the **most appropriate** way.

I am sometimes attacked for imposing 'rules'. Nothing could be further from the truth. All I do is report on how consumer react to different stimuli. I may say to a copywriter, Research shows that commercials with celebrities are below average in persuading people to buy products. Are you sure you want to use a celebrity? "Call that a rule? Or I may say to an art director, Research suggests that if you set the copy in black type on a white background, more people will read it than if you set it in white type on a black background."

A. Guidance based on applied research can hardly qualify as 'rules'.
B. Thus, all my so called rules are rooted in applied research.
C. A suggestion perhaps, but scarcely a rule.
D. Such principles are unavoidable if one wants to be systematic about consumer behaviour.
E. Fundamentally it is about consumer behaviour i.e., not about celebrities or type settings.

cat2006 verbal-ability passage-reading

### 2.27.6 Passage Reading: CAT 2006 | Question: 32 top

The following paragraph from which the last sentence has been deleted. From the given options, choose the one that completes the paragraph in the **most appropriate** way.

Relations between the factory and the dealer are distant and usually strained as the factory tries to force cars on the dealers to smooth out production. Relations between the dealer and the consumer are equally strained because dealers continuously adjust prices – make deals – to adjust demand with supply while maximizing profits. This becomes a system marked by a lack of long-term commitment on either side, which maximize feelings of mistrust. In order to maximize their bargaining positions, everyone holds back information – the dealer about the product and the consumer about his true desires.

A. As a result, 'deal making' becomes a rampant, without concern for consumer satisfaction.
B. As a result, inefficiencies creep into the supply chain.
C. As a result, everyone treat the other as an adversary, rather than as an ally.
D. As a result, fundamental innovations are becoming scarce in the automobile industry.
E. As a result, everyone losses in the long run.

cat2006 verbal-ability passage-reading

### 2.27.7 Passage Reading: CAT 2006 | Question: 33 top

The following paragraph from which the last sentence has been deleted. From the given options, choose the one that completes the paragraph in the **most appropriate** way.

In the evolving world order, the comparative advantage of the United States lies in its military force. Diplomacy and international law have always been regarded as annoying encumbrances, unless they can be used to advantage against an enemy. Every active player in world affairs professes to seek only peace and prefer negotiation to violence and coercion.

A. However, diplomacy has often been used as a mask by nations which indented to use force.
B. However, when the veil is lifted, we commonly see that diplomacy is understood as a disguise for the rule of force.
C. However, history has shown that many of these nations do not practice what they profess.
D. However, history tells us that peace is professed by those who intend to use violence.
E. However, when unmasked, such nations reveal a penchant for the use of force.

cat2006 verbal-ability passage-reading

## 2.27.8 Passage Reading: CAT 2006 | Question: 34 top

The following paragraph from which the last sentence has been deleted. From the given options, choose the one that completes the paragraph in the **most appropriate** way.

Age has a curvilinear relationship with the exploitation of the opportunity. Initially, age will increase the likelihood that a person will exploit an entrepreneurial opportunity because people gather much of the knowledge necessary to exploit opportunities over the course of heir lives, and because age provides credibility in transmitting that information to others. However, as people become older, their willingness to bear risks declines, their opportunity costs rise, and they become less receptive to new information.

A. As a result, people transmit more information rather than experiment with new ideas as they reach an advanced age.
B. As a result, people are reluctant to experiment with new ideas as they reach an advance age.
C. As a result, only people with lower opportunity costs exploit opportunity when they reach an advanced age.
D. As a result, people become reluctant to exploit entrepreneurial opportunities when they reach an advanced age.
E. As a result, people depend on credibility rather than on novelty as they reach an advanced age.

cat2006 verbal-ability passage-reading

## 2.27.9 Passage Reading: CAT 2006 | Question: 35 top

The following paragraph from which the last sentence has been deleted. From the given options, choose the one that completes the paragraph in the **most appropriate** way.

We can usefully think of theoretical models as maps, which help us navigate unfamiliar territory. The most accurate map that it is possible to construct would be of no practical use whatsoever, for it would be exact replica, on exactly the same scale, of the place where we were. Good maps pull out the most important features and throw away a huge amount of much less valuable information. Of course, maps can be bad as well as good – witness the attempts by medieval Europe to produce a map of the world. In the same way, a bad theory, no matter how impressive it may seem in principle, does little or nothing to help us understand a problem.

A. But good theories, just like good maps, are invaluable, even if they are simplified.
B. But good theories, just like good maps, will never represent unfamiliar concepts in detail.
C. But good theories, just like good maps, need to balance detail and feasibility of representation.
D. But good theories, just like good maps, are accurate only at a certain level of abstraction.
E. But good theories, just like good maps, are useful in the hands of a user who knows their limitations.

cat2006 verbal-ability passage-reading

## 2.27.10 Passage Reading: CAT 2015 | Question: 51 top

Answer the questions on the basis of the information given below:

Two traders, Harshit and Dhara, were involved in the buying and selling of MCS shares over five trading days. At the beginning of the first day, the MCS share was priced at Rs 100, while at the end of the fifth day it was priced at Rs 110. At the end of each day, the MCS share price either went up by Rs 10, or else, it came down by Rs 10. Both Harshit and Dhara took buying and selling decisions at the end of each trading day. The beginning price of MCS share on a given day was the same as the ending price of the previous day. Harshit and Dhara started with the same number of shares and amount of cash, and had enough of both. Below are some additional facts amount how Harshit and Dhara traded over the five trading days.

Each day if the price went up, Harshit sold 10 shares of MCS at the closing price. On the other hand, each day if the price went down, he brought 10 shares at the closing price. If on any day, the closing price was above Rs 110, then Dhara sold 10 shares of MCS, while if it was below Rs 90, he bought 10 shares, all at the closing price.

If Harshit sold 10 shares of MCS on three consecutive days, while Dhara sold 10 shares only once during the five days, what was the price of MCS at the end of day 3?

A. Rs 90 B. Rs 100 C. Rs 110 D. Rs 120 E. Rs 130

cat2015 logical-reasoning passage-reading

## 2.27.11 Passage Reading: CAT 2015 | Question: 52 top

Answer the questions on the basis of the information given below:

Two traders, Harshit and Dhara, were involved in the buying and selling of MCS shares over five trading days. At the

beginning of the first day, the MCS share was priced at Rs 100, while at the end of the fifth day it was priced at Rs 110. At the end of each day, the MCS share price either went up by Rs 10, or else, it came down by Rs 10. Both Harshit and Dhara took buying and selling decisions at the end of each trading day. The beginning price of MCS share on a given day was the same as the ending price of the previous day. Harshit and Dhara started with the same number of shares and amount of cash, and had enough of both. Below are some additional facts amount how Harshit and Dhara traded over the five trading days.

Each day if the price went up, Harshit sold 10 shares of MCS at the closing price. On the other hand, each day if the price went down, he brought 10 shares at the closing price. If on any day, the closing price was above Rs 110, then Dhara sold 10 shares of MCS, while if it was below Rs 90, he bought 10 shares, all at the closing price.

If Harshit ended up with Rs 1300 more cash than Dhara at the end of day 5, what was the price of MCS share at the end of day 4?

A. Rs 90
B. Rs 100
C. Rs 110
D. Rs 120
E. Not uniquely determinable

### 2.27.12 Passage Reading: CAT 2015 | Question: 53 top

Answer the questions on the basis of the information given below:

Two traders, Harshit and Dhara, were involved in the buying and selling of MCS shares over five trading days. At the beginning of the first day, the MCS share was priced at Rs 100, while at the end of the fifth day it was priced at Rs 110. At the end of each day, the MCS share price either went up by Rs 10, or else, it came down by Rs 10. Both Harshit and Dhara took buying and selling decisions at the end of each trading day. The beginning price of MCS share on a given day was the same as the ending price of the previous day. Harshit and Dhara started with the same number of shares and amount of cash, and had enough of both. Below are some additional facts amount how Harshit and Dhara traded over the five trading days.

Each day if the price went up, Harshit sold 10 shares of MCS at the closing price. On the other hand, each day if the price went down, he brought 10 shares at the closing price. If on any day, the closing price was above Rs 110, then Dhara sold 10 shares of MCS, while if it was below Rs 90, he bought 10 shares, all at the closing price.

If Dhara ended up with 20 more shares than Harshit at the end of day 5, what was the price of the shares at the end of day 3?

A. Rs 90 B. Rs 100 C. Rs 110 D. Rs 120 E. Rs 130

cat2015 logical-reasoning passage-reading

### 2.27.13 Passage Reading: CAT 2015 | Question: 54 top

Answer the questions on the basis of the information given below:

Two traders, Harshit and Dhara, were involved in the buying and selling of MCS shares over five trading days. At the beginning of the first day, the MCS share was priced at Rs 100, while at the end of the fifth day it was priced at Rs 110. At the end of each day, the MCS share price either went up by Rs 10, or else, it came down by Rs 10. Both Harshit and Dhara took buying and selling decisions at the end of each trading day. The beginning price of MCS share on a given day was the same as the ending price of the previous day. Harshit and Dhara started with the same number of shares and amount of cash, and had enough of both. Below are some additional facts amount how Harshit and Dhara traded over the five trading days.

Each day if the price went up, Harshit sold 10 shares of MCS at the closing price. On the other hand, each day if the price went down, he brought 10 shares at the closing price. If on any day, the closing price was above Rs 110, then Dhara sold 10 shares of MCS, while if it was below Rs 90, he bought 10 shares, all at the closing price.

What could have been the maximum possible increase in combined cash balance of Harshit and Dhara at the end of the fifth day?

A. Rs 3700 B. Rs 4000 C. Rs 4700 D. Rs 5000 E. Rs 6000

cat2015 logical-reasoning passage-reading

### 2.27.14 Passage Reading: CAT 2018 Set-1 | Question: 35 top

1600 satellites were sent up by a country for several purposes. The purposes are classified as broadcasting (B), communication (C), surveillance (S), and others (O). A satellite can serve multiple purposes; however a satellite serving either B, or C, or S does not serve O.

The following facts are known about the satellites:

1. The numbers of satellites serving B, C, and S (though may be not exclusively) are in the ratio 2:1:1.
2. The number of satellites serving all three of B, C, and S is 100.
3. The number of satellites exclusively serving C is the same as the number of satellites exclusively serving S. This number is

30% of the number of satellites exclusively serving B.
4. The number of satellites serving O is the same as the number of satellites serving both C and S but not B.

What best can be said about the number of satellites serving C?

A. Must be between 450 and 725.
B. Cannot be more than 800.
C. Must be between 400 and 800.
D. Must be atleast 100.

cat2018-1 logical-reasoning passage-reading

## 2.27.15 Passage Reading: CAT 2018 Set-1 | Question: 36 top

1600 satellites were sent up by a country for several purposes. The purposes are classified as broadcasting (B), communication (C), surveillance (S), and others (O). A satellite can serve multiple purposes; however a satellite serving either B, or C, or S does not serve O.

The following facts are known about the satellites:

## 2.27.16 Passage Reading: CAT 2018 Set-1 | Question: 37 top

1600 satellites were sent up by a country for several purposes. The purposes are classified as broadcasting (B), communication (C), surveillance (S), and others (O). A satellite can serve multiple purposes; however a satellite serving either B, or C, or S does not serve O.

The following facts are known about the satellites:

1. The numbers of satellites serving B, C, and S (though may be not exclusively) are in the ratio 2 : 1 : 1.
2. The number of satellites serving all three of B, C, and S is 100.
3. The number of satellites exclusively serving C is the same as the number of satellites exclusively serving S. This number is 30% of the number of satellites exclusively serving B.
4. The number of satellites serving O is the same as the number of satellites serving both C and S but not B.

If at least 100 of the 1600 satellites were serving O, what can be said about the number of satellites serving S?

A. At most 475
B. Exactly 475
C. At least 475
D. No conclusion is possible based on the given information

## 2.27.17 Passage Reading: CAT 2018 Set-1 | Question: 38 top

1600 satellites were sent up by a country for several purposes. The purposes are classified as broadcasting (B), communication (C), surveillance (S), and others (O). A satellite can serve multiple purposes; however a satellite serving either B, or C, or S does not serve O.

The following facts are known about the satellites:

1. The numbers of satellites serving B, C, and S (though may be not exclusively) are in the ratio 2 : 1 : 1.
2. The number of satellites serving all three of B, C, and S is 100.
3. The number of satellites exclusively serving C is the same as the number of satellites exclusively serving S. This number is 30% of the number of satellites exclusively serving B.
4. The number of satellites serving O is the same as the number of satellites serving both C and S but not B.

If the number of satellites serving at least two among B, C, and S is 1200, which of the following MUST be FALSE?

A. The number of satellites serving C cannot be uniquely determined.
B. The number of satellites serving B is more than 1000.
C. All 1600 satellites serve B or C or S.

D. The number of satellites serving B exclusively is exactly 250.

## 2.27.18 Passage Reading: CAT 2019 Set-1 | Question: 39 top

Princess, Queen, Rani and Samragni were the four finalists in a dance competition. Ashman, Badal, Gagan and Dyu were the four music composers who individually assigned items to the dancers. Each dancer had to individually perform in two dance items assigned by the different composers. The first items performed by the four dancers were all assigned by different music composers. No dancer performed her second item before the performance of the first item by any other dancers.The dancers performed their second items in the same sequence of their performance of their first items.

The following additional facts are known.

i. No composer who assigned item to Princess, assigned any item to Queen.
ii. No composer who assigned item to Rani, assigned any item to Samragni.
iii. The first performance was by Princess; this item was assigned by Badal.
iv. The last performance was by Rani; this item was assigned by Gagan.
v. The items assigned by Ashman were performed consecutively. The number of performances between items assigned by each of the remaining composers was the same.

Which of the following is true?

A. The second performance was composed by Dyu
B. The third performance was composed by Ashman
C. The second performance was composed by Gagan
D. The third performance was composed by Dyu

## 2.27.22 Passage Reading: CAT 2019 Set-2 | Question: 47 top

The first year students in a business school are split into six sections. In 2019 the Business Statistics course was taught in these six sections by Annie, Beti, Chetan, Dave, Esha, and Fakir. All six sections had a common midterm (MT) and a common endterm (ET) worth 100 marks each. ET contained more questions than MT. Questions for MT and ET were prepared collectively by the six faculty members. Considering MT and ET together, each faculty member prepared the same number of questions. Each of MT and ET had at least four questions that were worth 5 marks, at least three questions that were worth 10 marks, and at least two questions that were worth 15 marks. In both MT and ET, all the 5-mark questions preceded the 10-mark questions, and all the 15- mark questions followed the 10-mark questions.

The following additional facts are known.

i. Annie prepared the fifth question for both MT and ET. For MT, this question carried 5 marks.
ii. Annie prepared one question for MT. Every other faculty member prepared more than one questions for MT.
iii. All questions prepared by a faculty member appeared consecutively in MT as well as ET.
iv. Chetan prepared the third question in both MT and ET; and Esha prepared the eighth question in both.
v. Fakir prepared the first question of MT and the last one in ET. Dave prepared the last question of MT and the first one in ET.

The second question in ET was prepared by :

A. Dave B. Beti C. Chetan D. Esha

Which of the following questions did Beti prepare in ET?

A. Seventh question
B. Fourth question
C. Ninth question
D. Tenth question

cat2019-2 logical-reasoning passage-reading

## 2.27.26 Passage Reading: CAT 2020 Set-2 | Question: 35 top

A shopping mall has a large basement parking lot with parking slots painted in it along a single row. These slots are quite narrow; a compact car can fit in a single slot but an SUV requires two slots. When a car arrives, the parking attendant guides the car to the first available slot from the beginning of the row into which the car can fit.

For our purpose, cars are numbered according to the order in which they arrive at the lot. For example, the first car to arrive is given a number 1, the second a number 2, and so on. This numbering does not indicate whether a car is a compact or an SUV. The configuration of a parking lot is a sequence of the car numbers in each slot. Each single vacant slot is represented by letter *V*.

For instance, suppose cars numbered 1 through 5 arrive and park, where cars 1, 3 and 5 are compact cars and 2 and 4 are SUV s. At this point, the parking lot would be described by the sequence 1, 2, 3, 4, 5. If cars 2 and 5 now vacate their slots, the parking lot would now be described as 1, V, V,3, 4. If a compact car (numbered 6) arrives subsequently followed by an SUV (numbered 6), arrives subsequently followed by an SUV (numbered 7), the parking lot would be described by the sequence 1, 6, V, 3, 4, 7.

Initially cars numbered 1, 2, 3 and 4 arrive among which 1 and 4 are SUVs while 2 and 3 are compact cars. Car 1 then leaves, followed by the arrivals of car 5 (a compact car) and car 6 (an SUV). Car 4 then leaves. Then car 7 (an SUV) and car 8 (a compact car) arrive. At this moment, which among the following numbered car is parked next to car 3?

A. 8 B. 6 C. 5 D. 7

cat2020-set2 logical-reasoning passage-reading

## 2.27.27 Passage Reading: CAT 2020 Set-2 | Question: 36 top

A shopping mall has a large basement parking lot with parking slots painted in it along a single row. These slots are quite narrow; a compact car can fit in a single slot but an SUV requires two slots. When a car arrives, the parking attendant guides the car to the first available slot from the beginning of the row into which the car can fit.

For our purpose, cars are numbered according to the order in which they arrive at the lot. For example, the first car to arrive is given a number 1, the second a number 2, and so on. This numbering does not indicate whether a car is a compact or an SUV. The configuration of a parking lot is a sequence of the car numbers in each slot. Each single vacant slot is represented by letter *V*.

For instance, suppose cars numbered 1 through 5 arrive and park, where cars 1, 3 and 5 are compact cars and 2 and 4 are SUV s. At this point, the parking lot would be described by the sequence 1, 2, 3, 4, 5. If cars 2 and 5 now vacate their slots, the parking lot would now be described as 1, V, V,3, 4. If a compact car (numbered 6) arrives subsequently followed by an SUV (numbered 6) arrives subsequently followed by an SUV (numbered 7), the parking lot would be described by the sequence 1, 6, V, 3, 4, 7.

Suppose eight cars have arrived, of which two have left. Also suppose that car 4 is a compact and car 7 is an SUV. Which of the following is a POSSIBLE current configuration of the parking lot?

A. V, 2, 3, 7, 5, 6, 8
B. 8, 2, 3, V, 5, 6, 7
C. 8, 2, 3, V, 6, 5, 7
D. 8, 2, 3, V, 5, 7, 6

## 2.27.28 Passage Reading: CAT 2020 Set-2 | Question: 37 top

A shopping mall has a large basement parking lot with parking slots painted in it along a single row. These slots are quite narrow; a compact car can fit in a single slot but an SUV requires two slots. When a car arrives, the parking attendant guides the car to the first available slot from the beginning of the row into which the car can fit.

For our purpose, cars are numbered according to the order in which they arrive at the lot. For example, the first car to arrive is given a number 1, the second a number 2, and so on. This numbering does not indicate whether a car is a compact or an SUV. The configuration of a parking lot is a sequence of the car numbers in each slot. Each single vacant slot is represented by letter *V*.

For instance, suppose cars numbered 1 through 5 arrive and park, where cars 1, 3 and 5 are compact cars and 2 and 4 are SUV s. At this point, the parking lot would be described by the sequence 1, 2, 3, 4, 5. If cars 2 and 5 now vacant their slots, the parking lot would now be described as 1, V, V,3, 4. If a compact car (numbered 6) arrives subsequently followed by an SUV (numbered 7), the parking lot would be described by the sequence 1, 6, V, 3, 4, 7.

Suppose the sequence at some point of time is 4, 5, 6, V, 3. Which of the following is NOT necessarily true ?

A. Car 5 is a compact.
B. Car 4 is a compact.
C. Car 3 is an SUV.
D. Car 1 is an SUV.

cat2020-set2 logical-reasoning passage-reading

## 2.27.29 Passage Reading: CAT 2020 Set-2 | Question: 38 top

A shopping mall has a large basement parking lot with parking slots painted in it along a single row. These slots are quite narrow; a compact car can fit in a single slot but an SUV requires two slots. When a car arrives, the parking attendant guides the car to the first available slot from the beginning of the row into which the car can fit.

For our purpose, cars are numbered according to the order in which they arrive at the lot. For example, the first car to arrive is given a number 1, the second a number 2, and so on. This numbering does not indicate whether a car is a compact or an SUV. The configuration of a parking lot is a sequence of the car number in each slot. Each single vacant slot is represented by letter *V*.

For instance, suppose cars numbered 1 through 5 arrive and park, where cars 1, 3 and 5 are compact cars and 2 and 4 are SUVs. At this point, the parking lot would be described by the sequence 1, 2, 3, 4, 5. If cars 2 and 5 now vacant their slots, the parking lot would now be described as 1, V, V,3, 4. If a compact car (numbered 6) arrives subsequently followed by an SUV (numbered 7), the parking lot would be described by the sequence 1, 6, V, 3, 4, 7.

Suppose that car 4 is not the first car to leave and that the sequence at a time between the arrival of the car 7 and car 8 is V, 7, 3, 6, 5. Then which of the following statement MUST be false ?

A. Car 7 is a compact.
B. Car 4 is an SUV.
C. Car 6 is a compact.
D. Car 2 is a compact.

## 2.27.30 Passage Reading: CAT 2021 Set-3 | Data Interpretation and Logical Reasoning | Question: 14 top

Three reviewers Amal, Bimal, and Komal are tasked with selecting questions from a pool of 13 questions (Q01 to Q13). Questions can be created by external "subject matter experts" (SMEs) or by one of the three reviewers. Each of the reviewers either approves or disapproves a question that is shown to them. Their decisions lead to eventual acceptance or rejection of the question in the manner described below.

If a question is created by an SME, it is reviewed first by Amal, and then by Bimal. If both of them approve the question, then the question is accepted and is not reviewed by Komal. If both disapprove the question, it is rejected and is not reviewed by Komal. If one of them approves the question and the other disapproves it, then the question is reviewed by Komal. Then the question is accepted only if she approves it.

A question created by one of the reviewers is decided upon by the other two. If a question is created by Amal, then it is first reviewed by Bimal. If Bimal approves the question, then it is accepted. Otherwise, it is reviewed by Komal. The question is then accepted only if Komal approves it. A similar process is followed for questions created by Bimal, whose questions are first reviewed by Komal, and then by Amal only if Komal disapproves it. Questions created by Komal are first reviewed by Amal, and then, if required, by Bimal.

The following facts are known about the review process after its completion.

1. Q02, Q06, Q09, Q11, and Q12 were rejected and the other questions were accepted.
2. Amal reviewed only Q02, Q03, Q04, Q06, Q08, Q10, Q11, and Q13.
3. Bimal reviewed only Q02, Q04, Q06 through Q09, Q12, and Q13.
4. Komal reviewed only Q01 through Q05, Q07, Q08, Q09, Q11, and Q12.

How many questions were DEFINITELY disapproved by Bimal?

A. 4 B. 7 C. 5 D. 3

### 2.31.3 Round Table Arrangement: Round Table Arrangement top

Eight people – A, B, C, D, E, F, G and H are sitting around a circular table facing the centre, but not necessarily in the same order. All of them are at equidistant. Each one of them teaches different subjects viz., English, Hindi, Mathematics, Biology, Psychology, Physics, Chemistry and Accounts, but not necessarily in the same order.

The person who teaches Accounts, sits third to the right of G. C is an immediate neighbour of G. The person who teaches Mathematics sits second to the left of C. B sits third to the right of H. H teaches neither Accounts nor Mathematics. Only two persons sit between C and the person who teaches Physics. A and F are immediate neighbours of each other. Neither A nor F teaches Accounts. The person who teaches English sits second to the right of A. Two persons sit between D and the person who teaches Hindi. D does not teach Accounts. The person who teaches Psychology is an immediate neighbour of the person who teaches Accounts. The person who teaches Physics sits second to the left of A. One of the immediate neighbours of G teaches Chemistry.

1. Who among the following teaches Chemistry?

1. A
2. H
3. D
4. G
5. None of these

### 2.31.5 Round Table Arrangement: seating arrangement top

(Directions: Q. Nos. 26 to 30): Study the following information and answer the following questions.

Eight people E, F, G, H, J, K, L and M are sitting around a circular table facing the centre. Each of them is of a different profession Chartered Accountant, Columnist, Doctor, Engineer, Financial Analyst, Lawyer, Professor and Scientist but not necessarily in the same order. F is sitting second to the left of K. The Scientist is an immediate neighbor of K. There are only three people between the Scientist and E. Only one person sits between the Engineer and E. The Columnist is to the immediate right of the Engineer. M is second to the right of K. H is the Scientist. G and J are immediate neighbours of each other. Neither G nor J is an Engineer. The Financial Analyst is to immediate left of F. The Lawyer is second to the right of the Columnist.

The Professor is an immediate neighbour of the Engineer. G is second to the right of the Chartered Accountant.

26. Who is sitting second to the right of E?

1.The Lawyer
2.E
3.G
4.The Engineer
5.F
6.K

27. Who amongst the following is the Professor?

1.F
2.L
3.M
4.K
5.J

28. Four of the following five are alike in a certain way based on the given arrangement and hence from a group. Which of the following does not belong to that group?

1.Chartered Accountant – H
2.M – Doctor
3.J – Engineer
4.Financial Analyst – L
5.Lawyer – K

29. What is the position of L with respect to the scientist?

1.Third to the left
2.Second to the left
3.Second to the right
4.Third to the left
5.Immediate right

30. Which of the following statements is true according to the given arrangement?

1.The Lawyer is second to the left of the Doctor
2.E is an immediate neighbour of the Financial Analyst
3.H sits exactly between F and the Financial Analyst
4.Only four people sit between the Columnist and F
5.All of the given statements are true

### 2.31.7 Round Table Arrangement: study the information and answer the questions top

A, B, C, D, E, F, G and H are sitting around a circular table facing the center not necessarily in the same order. F is fourth to the left of A and second to the right of C. B is second to the left of A, and A is to the immediate right of G. E who is not an immediate neighbor of B is fourth to the left of D.

1. Which of the following is correct?

A. F is third to the left of B
B. H is third to the left of D
C. C is third to the left of B
D. E is third to the left of F
E. All are correct

2. Who is second to the right of E?

A. C
B. H
C. G
D. A
E. Data inadequate

3. Which of the following pairs represents the immediate neighbors of A?

A. EB
B. GC
C. EG
D. ED
E. None of these

4. What is H's position with respect to G?

A. Fifth to the right
B. Third to the left
C. Third to the right
D. Fifth to the left
E. Fourth to the left

## 2.32 Seating Arrangement (16) top

### 2.32.1 Seating Arrangement: A developer is planning to build a housing complex on an empty tract of land. top

A developer is planning to build a housing complex on an empty tract of land. Exactly seven different styles of houses- Q, R, S, T, W, X, and Z - will be built in the complex. The complex will contain several blocks, and the developer plans to put houses of at least three different styles on each block. The developer will build the complex according to the following rules :

Any block that has styles Z on it must also have style W on it.

Any block adjacent to one that has on it both style S and style X must have on it style T and style Z.

No block adjacent to one that has on it both style R and style Z can have on it either style T or style W.

No block can have on it both style S and style Q.

1 ) Which of the following can be the complete selection of house styles on a block ?

1. Q, R, S
2. Q, S, X
3. R, T, Z
4. S,W, Z
5. T, X, Z

2 ) Which of the following house styles must be on a block that is adjacent to one that has on it only styles S, T, W, X, and Z ?

1. Q
2. R
3. S

4. W
5. X

3 ) Which of the following can be the complete selection of house styles for a block that is adjacent to exactly one block, if that one block has on it styles S, T, W, and X only ?

1. S, T and X
2. T, X and Z
3. R, S, X and Z
4. S, T, W and X
5. T, W, X and Z.

### 2.34.11 Sentence Rearrangement: CAT 1996 | Question: 5 top

In each of the following questions, four sentences are given between the sentences numbered 1 and 6. You are required to arrange the four sentences so that all six together make a logical paragraph.

1. Since its birth, rock has produced a long string of guitar heroes.

A. It is a list that would begin with Chuck Berry, continue on through Hendrix, Page and Clapton.

B. These are musicians celebrated for their sheer instrumental talent, and their flair for expansive, showy and sometimes selfindulgent solos.

C. It would also include players of more recent vintage, like Van Halen and Living Colour's Vernon Reid.

D. But with the advent of alternative rock and grunge, guitar heroism became uncool.

6. Guitarists like Peter Buck and Kurt Cobain shy away from exhibitionism.

A. ACBD B. ABCD
C. BCAD D. BADC

cat1996 logical-reasoning sentence-rearrangement

### 2.34.12 Sentence Rearrangement: CAT 1996 | Question: 50 top

Arrange the four sentences in order so that they make a logically coherent paragraph.

A. Something magical is happening to our planet.

B. Some are calling it a paradigm shift.

C. It's getting smaller.

D. Others call t business transformation.

A. ABDC B. ACDB C. ABCD D. ACBD

cat1996 logical-reasoning sentence-rearrangement

## 2.34.13 Sentence Rearrangement: CAT 1996 | Question: 6 top

In each of the following questions, four sentences are given between the sentences numbered 1 and 6. You are required to arrange the four sentences so that all six together make a logical paragraph.

1. Hiss was serving as head of the Endowment on Aug 3, 1948, when Whittaker Chambers reluctantly appeared before the House Un-American Activities Committee.

A. Chambers, a portly rumpled man with a melodramatic style, had been a Communist courier but had broken with the party in 1938.

B. When Nixon arranged a meeting of the two men in New York, Chambers repeated his charges and Hiss his denials.

C. Summoned as a witness, Hiss denied he had ever been a Communist or had known Chambers.

D. He told the Committee that among the members of a secret Communist cell in Washington during the '30*s* was Hiss.

6. Then, bizarrely, Hiss asked Chambers to open his mouth.

A. CBAD
B. ADBC
C. ADCB
D. ACDB

cat1996 logical-reasoning sentence-rearrangement

## 2.34.14 Sentence Rearrangement: CAT 1996 | Question: 7 top

In each of the following questions, four sentences are given between the sentences numbered 1 and 6. You are required to arrange the four sentences so that all six together make a logical paragraph.

1. For many scientists, oceans are the cradle of life.

A. But all over the world, chemical products and nuclear waste continue to be dumped into them.

B. Coral reefs, which are known as the most beautiful places of the submarine world, are fast disappearing.

C. The result is that many species of fish die because of this pollution.

D. Of course man is the main cause of these problems.

6. Man has long since ruined the places he goes to — continents and oceans alike.

A. ACBD B. BACD C. ABDC D. BCAD

cat1996 logical-reasoning sentence-rearrangement

## 2.34.15 Sentence Rearrangement: CAT 1996 | Question: 8 top

In each of the following questions, four sentences are given between the sentences numbered 1 and 6. You are required to arrange the four sentences so that all six together make a logical paragraph.

1. Am I one of the people who are worried that Bill Clinton's second term might be destroyed by a constitutional crisis?

A. On the other hand, ordinary citizens have put the campaign behind them.

B. In other words, what worries me is that Bill Clinton could exhibit a version of what George Bush used to refer to as Big Mo.

C. That is, he might have so much campaign momentum that he may not be able to stop campaigning.

D. Well, it's true that I've been wondering whether a President could be impeached or refusing to stop talking about the bridge we need to build to the 21 century.

6. They prefer now to watch their favourite soaps and acts on TV rather than senators.

A. DBCA B. ABDC C. BACD D. CBDA

cat1996 logical-reasoning sentence-rearrangement

## 2.34.16 Sentence Rearrangement: CAT 1996 | Question: 9 top

In each of the following questions, four sentences are given between the sentences numbered 1 and 6. You are required to arrange the four sentences so that all six together make a logical paragraph.

1. Historically, stained glass was almost entirely reserved for ecclesiastical spaces.

A. By all counts, he has accomplished that mission with unmistakable style.

B. "It is my mission to bring it kicking and screaming out of that milieu," says Clarke.

C. The first was the jewel-like windows he designed for a Cistercian Church in Switzerland.

D. Two recent projects show his genius in the separate worlds of the sacred and the mundane.

6. The other was a spectacular, huge skylight in a shopping complex in Brazil.

A. CBAD
B. BADC
C. ABDC
D. DBAC

cat1996 logical-reasoning sentence-rearrangement

## 2.35 Sequences&series (45) top

### 2.35.1 Sequences&series: Four of the following five are alike top

R @ 2 9 T V A Y 5 © # J 1 P 8 Q $ E 3 * H % 6 W 4 I δ U Z

Four of the following five are alike in a certain way based on their positions in the above arrangement and so form a group. Which is the one that does not belong to that group?

1. J P ©
2. E Q *
3. W I %
4. 9 V @
5. 1 # δ

sequences&series

Answer key

### 2.35.2 Sequences&series: How many such numbers top

R @ 2 9 T V A Y 5 © # J 1 P 8 Q $ E 3
* H % 6 W 4 I δ U Z

How many such numbers are there in the above arrangement, each of which is immediately prepared by a consonant and immediately followed by a symbol?

1. One
2. Two
3. Three
4. Four
5. More than four

sequences&series

Answer key

### 2.35.3 Sequences&series: Little confusion in reading the statement Required Clue here top

Consider the following series:
N 3 $ A 2 % P 5 # 7 E R ¥ 11 T 9 B O

if starting from A each alternate letter/number/symbol will be deleted which letter/number/symbol will be $3^{rd}$ to the left of the letter/number/symbol which is $4^{th}$ from the right end.

1. 7
2. 11
3. *O*
4. %
5. *R*

When we delete alternate letter/number/symbol starting from A, then new series will A % 5 7 R 11 9 0

So, $3^{rd}$ to the left and $4^{th}$ from the right end $= 7^{th}$ from right end is %

why considering deleted one

### 2.36.9 Some All None: CAT 1995 | Question: 42 top

Each of the following questions contains six statements followed by four sets of combinations of three. You have to choose that set in which the statements are logically related.

A. Rajender is an industrialist.

B. Ramkumar is Rajender's brother.

C. Some men are cruel

D. No industrialist is honest.

E. Rajender is not honest

F. Rajender is not cruel.

A. ACF B. ABE C. DCE D. ADE

cat1995 logical-reasoning some-all-none

### 2.36.10 Some All None: CAT 1995 | Question: 43 top

Each of the following questions contains six statements followed by four sets of combinations of three. You have to choose that set in which the statements are logically related.

A. All dogs are honest.

B. Dogs are characterized by honesty

C. Xerox is a dog.

D. Anish's pet is a dog.

E. All honest animals are dogs.

F. Xerox is honest.

A. BDF B. ACF C. ADE D. CEF

### 2.36.11 Some All None: CAT 1995 | Question: 44 top

Each of the following questions contains six statements followed by four sets of combinations of three. You have to choose that set in which the statements are logically related.

A. Some Asians are Indians.

B. Some Asians are hardworking.

C. All Indians are Asians.

D. Some Indians are Asians.

E. Some Indians are hardworking.

F. No Indian is hardworking.

A. BDE B. CEB C. CDF D. BDF

cat1995 logical-reasoning some-all-none

### 2.36.12 Some All None: CAT 1995 | Question: 45 top

Each of the following questions contains six statements followed by four sets of combinations of three. You have to choose that set in which the statements are logically related.

A. Some books are funny.

B. Some books are not funny.

C. All funny books are best-sellers.

D. Some bestsellers are not funny.

E. Some books are not best-sellers.

F. Some books are best-sellers.

A. BDE B. CDF C. ACF D. BDF

cat1995 logical-reasoning some-all-none

### 2.36.13 Some All None: CAT 1995 | Question: 46 top

Each question contains six statements followed by four sets of combinations of three. Choose the set in which the combinations are logically related.

A. Some abra are dabra.

B. All abra are cabra.

C. All dabra are abra.

D. All dabra are abra.

E. Some cabra are abra

F. Some cabra are dabra.

A. AEF B. BCF C. ABD D. BCE

## 2.37 Statement Follows (12) top

### 2.37.1 Statement Follows: CAT 2002 | Question: 145 top

**Each question given below is followed by five statements numbered I, II, III, IV and V. The answer choice given below each question consists of one or more statements. You have to choose the choice which gives more relevant / useful information in answering the question correctly. Read all the statements together with the question and choose your answer.**

For what reason Purohit did not get the offer of employment?

**Statements:**

I. Purohit passed in the interview.
II. Purohit's friend passed the medical test who passed the interview along with Purohit.
III. Purohit's father did not want him to take the job.
IV. Purohit has another employment offer from another company.
V. Purohit did not clear the mandatory medical test.

A. III and IV only B. III, IV and V only C. I, III and IV only D. V only

cat2002 logical-reasoning statement-follows

### 2.37.2 Statement Follows: CAT 2002 | Question: 146 top

**Each question given below is followed by five statements numbered I, II, III, IV and V. The answer choice given below each question consists of one or more statements. You have to choose the choice which gives more relevant / useful information in answering the question correctly. Read all the statements together with the question and choose your answer.**

What were the possible reasons for incurring losses by DESCO for the last two years?

**Statements:**

I. The company's shares are not registered in the stock exchange.
II. The company does not export its products.
III. The company has inefficient labour force.
IV. The price of its product has fallen in the last two years due to competitive market.
V. Entry of similar foreign goods at a cheaper rate.

A. Only III, IV and V B. Only II, III and IV C. Only IV and V D. Only I and II

cat2002 logical-reasoning statement-follows

### 2.37.3 Statement Follows: CAT 2002 | Question: 147 top

**Each question given below is followed by five statements numbered I, II, III, IV and V. The answer choice given below each question consists of one or more statements. You have to choose the choice which gives more relevant / useful information in answering the question correctly. Read all the statements together with the question and choose your answer.**

On which day of the week did Sunil get his letter of promotion?

**Statements:**

I. Sunil purchased a new shirt on Friday
II. Sunil was given a party that Saturday.
III. Sunil was given the letter of promotion on the day before he purchased the shirt.
IV. Tuesday being his birthday, Sunil gave a party to all his friends.
V. Sunil's friend was promoted on Friday.

A. I and II only B. II, III and IV only C. I and III only D. II, III and V only

cat2002 logical-reasoning statement-follows

### 2.37.4 Statement Follows: CAT 2002 | Question: 148 top

## 2.37.6 Statement Follows: CAT 2016 | Question: 63 top

The table below presents the revenue (in million rupees) of four firms in three states. These firms, Honest Ltd., Aggressive Ltd., Truthful Ltd. and Profitable Ltd. are disguised in the table as A, B, C and D, in no particular order.

| States | Firm A | Firm B | Firm C | Firm D |
|---|---|---|---|---|
| UP | 49 | 82 | 80 | 55 |
| Bihar | 69 | 72 | 70 | 65 |
| MP | 72 | 63 | 72 | 65 |

Further, it is known that: In the state of MP, Truthful Ltd. has the highest market share. Aggressive Ltd.'s aggregate revenue differs from Honest Ltd.'s by Rs. 5 million.

What can be said regarding the following two statements?

Statement 1: Profitable Ltd. has the lowest share in MP market.

Statement 2: Honest Ltd.'s total revenue is more than Profitable Ltd.

A. If Statement 1 is true then Statement 2 is necessarily true.
B. If Statement 1 is true then Statement 2 is necessarily false.
C. Both Statement 1 and Statement 2 are true.
D. Neither Statement 1 nor Statement 2 is true.

cat2016 logical-reasoning statement-follows

## 2.37.7 Statement Follows: CAT 2016 | Question: 64 top

The table below presents the revenue (in million rupees) of four firms in three states. These firms, Honest Ltd., Aggressive Ltd., Truthful Ltd. and Profitable Ltd. are disguised in the table as A, B, C and D, in no particular order.

## 2.38 Statement Sufficiency (23) top

### 2.38.1 Statement Sufficiency: CAT 2000 | Question: 131 top

Each question is followed by two statements, I and II. Answer each question using the following instructions.

**Mark the answer as**

- Choose 1 if the question can be answered by using one of the statements alone, but cannot be answered using the other statement alone.
- Choose 2 if the question can be answered by using either statement alone.
- Choose 3 if the question can be answered by using both statements together, but cannot be answered using either statement alone.
- Choose 4 if the question cannot be answered even by using both statements together.

Consider three real numbers, X, Y and Z. Is Z the smallest of these numbers?

A. X is greater than at least one of Y and Z. B. Y is greater than at least one of X and Z.

A. 1 B. 2 C. 3 D. 4

cat2000 logical-reasoning statement-sufficiency

### 2.38.2 Statement Sufficiency: CAT 2000 | Question: 132 top

Each question is followed by two statements, I and II. Answer each question using the following instructions.

**Mark the answer as**

- Choose 1 if the question can be answered by using one of the statements alone, but cannot be answered using the other statement alone.
- Choose 2 if the question can be answered by using either statement alone.
- Choose 3 if the question can be answered by using both statements together, but cannot be answered using either statement alone.
- Choose 4 if the question cannot be answered even by using both statements together.

Let X be a real number. Is the modulus of X necessarily less than 3?

A. $X(X+3) < 0$ B. $X(X-3) > 0$

A. 1 B. 2 C. 3 D. 4

cat2000 logical-reasoning statement-sufficiency

### 2.38.3 Statement Sufficiency: CAT 2000 | Question: 133 top

Each question is followed by two statements, I and II. Answer each question using the following instructions.

**Mark the answer as**

- Choose 1 if the question can be answered by using one of the statements alone, but cannot be answered using the other statement alone.
- Choose 2 if the question can be answered by using either statement alone.
- Choose 3 if the question can be answered by using both statements together, but cannot be answered using either statement alone.
- Choose 4 if the question cannot be answered even by using both statements together.

How many people are watching TV programme P?

A. Number of people watching TV programme Q is 1000 and number of people watching both the programmes, P and Q, is 100.
B. Number of people watching TV programme Q is 600 and number of people watching both the programmes, P and Q, is 100.

A. 1 B. 2 C. 3 D. 4

cat2000 logical-reasoning statement-sufficiency

## 2.38.4 Statement Sufficiency: CAT 2000 | Question: 134 top

Each question is followed by two statements, I and II. Answer each question using the following instructions.

**Mark the answer as**

- Choose 1 if the question can be answered by using one of the statements alone, but cannot be answered using the other statement alone.
- Choose 2 if the question can be answered by using either statement alone.
- Choose 3 if the question can be answered by using both statements together, but cannot be answered using either statement alone.
- Choose 4 if the question cannot be answered even by using both statements together.

Triangle PQR has angle PRQ equal to 90 degrees. What is the value of PR + RQ?

A. Diameter of the inscribed circle of the triangle PQR is equal to 10 cm
B. Area of the triangle PQR is equal to 60 cm
C. Perimeter of the triangle PQR is equal to 40 cm

A. 1 B. 2 C. 3 D. 4

cat2000 logical-reasoning statement-sufficiency

## 2.38.5 Statement Sufficiency: CAT 2000 | Question: 135 top

Each question is followed by two statements, I and II. Answer each question using the following instructions.

**Mark the answer as**

- Choose 1 if the question can be answered by using one of the statements alone, but cannot be answered using the other statement alone.
- Choose 2 if the question can be answered by using either statement alone.
- Choose 3 if the question can be answered by using both statements together, but cannot be answered using either statement alone.
- Choose 4 if the question cannot be answered even by using both statements together.

Harshad bought shares of a company on a certain day, and sold them the next day. While buying and selling he had to pay to the broker one percent of the transaction value of the shares as brokerage. What was the profit earned by him per rupee spent on buying the shares?

A. The sales price per share was Rs. 105.
B. The number of shares purchased was 100.
C. The sales price per share was 1.05 times its purchase price.

A. 1 B. 2 C. 3 D. 4

cat2000 logical-reasoning statement-sufficiency

## 2.38.6 Statement Sufficiency: CAT 2000 | Question: 136 top

Each question is followed by two statements, I and II. Answer each question using the following instructions.

**Mark the answer as**

- Choose 1 if the question can be answered by using one of the statements alone, but cannot be answered using the other statement alone.
- Choose 2 if the question can be answered by using either statement alone.
- Choose 3 if the question can be answered by using both statements together, but cannot be answered using either statement alone.
- Choose 4 if the question cannot be answered even by using both statements together.

For any two real numbers,

$$a \oplus b = \begin{cases} 1 \text{ if both } a \text{ and } b \text{ are positive or both } a \text{ and } b \text{ are negative.} \\ -1 \text{ if one of the two numbers } a \text{ and } b \text{ is positive and the other negative.} \end{cases}$$

What is $(2 \oplus 0) \oplus (-5 \oplus -6)$?

A. $a \oplus b$ is zero if a is zero B. $a \oplus b = b \oplus a$

A. 1 B. 2 C. 3 D. 4

cat2000 logical-reasoning statement-sufficiency

## 2.38.7 Statement Sufficiency: CAT 2000 | Question: 137 top

Each question is followed by two statements, I and II. Answer each question using the following instructions.

**Mark the answer as**

- Choose 1 if the question can be answered by using one of the statements alone, but cannot be answered using the other statement alone.
- Choose 2 if the question can be answered by using either statement alone.
- Choose 3 if the question can be answered by using both statements together, but cannot be answered using either statement alone.
- Choose 4 if the question cannot be answered even by using both statements together.

There are two straight lines in the $x - y$ plane with equations $ax + by = c, dx + ey = f$. Do the two straight lines intersect?

A. $a, b, c, d, e$ and $f$ are distinct real numbers. B. $c$ and $f$ are non-zero

A. 1 B. 2 C. 3 D. 4

cat2000 logical-reasoning statement-sufficiency

## 2.38.8 Statement Sufficiency: CAT 2000 | Question: 138 top

Each question is followed by two statements, I and II. Answer each question using the following instructions.

**Mark the answer as**

- Choose 1 if the question can be answered by using one of the statements alone, but cannot be answered using the other statement alone.
- Choose 2 if the question can be answered by using either statement alone.
- Choose 3 if the question can be answered by using both statements together, but cannot be answered using either statement alone.
- Choose 4 if the question cannot be answered even by using both statements together.

O is the centre of two concentric circles. $ae$ is a chord of the outer circle and it intersects the inner circle at point; $b$ and $d$. $c$ is a point on the chord in between $b$ and $d$. What is the value of $ac/ce$?

A. $bc/cd = 1$ B. A third circle intersects the inner circle at $b$ and $d$ and the point $c$ is on the line joining the centres of the third ci

A. 1 B. 2 C. 3 D. 4

cat2000 logical-reasoning statement-sufficiency

## 2.38.9 Statement Sufficiency: CAT 2000 | Question: 139 top

Each question is followed by two statements, I and II. Answer each question using the following instructions.

**Mark the answer as**

- Choose 1 if the question can be answered by using one of the statements alone, but cannot be answered using the other statement alone.
- Choose 2 if the question can be answered by using either statement alone.
- Choose 3 if the question can be answered by using both statements together, but cannot be answered using either statement alone.
- Choose 4 if the question cannot be answered even by using both statements together.

Ghosh Babu has decided to take a non-stop flight from Mumbai to No-man's-land in South America. He is scheduled to leave Mumbai at 5 am, Indian Standard Time on December 10, 2000. What is the local time at No-man's-land when he reaches there?

A. The average speed of the plane is 700 kilometres per hour. B. The flight distance is 10,500 kilometres.

A. 1B. 2C. 3D. 4

cat2000 logical-reasoning statement-sufficiency

## 2.38.10 Statement Sufficiency: CAT 2000 | Question: 140 top

Each question is followed by two statements, I and II. Answer each question using the following instructions.

**Mark the answer as**

- Choose 1 if the question can be answered by using one of the statements alone, but cannot be answered using the other statement alone.
- Choose 2 if the question can be answered by using either statement alone.
- Choose 3 if the question can be answered by using both statements together, but cannot be answered using either statement alone.
- Choose 4 if the question cannot be answered even by using both statements together.

What are the ages of two individuals, X and Y?

A. The age difference between them is 6 years. B. The product of their ages is divisible by 6

A. 1B. 2C. 3D. 4

cat2000 logical-reasoning statement-sufficiency

## 2.38.11 Statement Sufficiency: CAT 2001 | Question: 121 top

Choose 1 if the question can be answered by using one of the statements alone, but cannot be answered using the other statement alone.
Choose 2 if the question can be answered by using either statement alone.
Choose 3 if the question can be answered by using both statements together, but cannot be answered using either statement alone.
Choose 4 if the question cannot be answered even by using both statements together.

What are the values of $m$ and $n$?

A. $n$ is an even integer, $m$ is an odd integer. B. Product of $m$ and $n$ is 30

A. 1B. 2C. 3D. 4

cat2001 logical-reasoning statement-sufficiency

Answer key

## 2.38.12 Statement Sufficiency: CAT 2001 | Question: 122 top

Choose 1 if the question can be answered by using one of the statements alone, but cannot be answered using the other statement alone.
Choose 2 if the question can be answered by using either statement alone.
Choose 3 if the question can be answered by using both statements together, but cannot be answered using either statement alone.
Choose 4 if the question cannot be answered even by using both statements together.

Is Country X's GDP higher than country Y's GDP?

A. GDPs of the countries X and Y were equal 5 years ago. B. Every year, GDP of country X was higher than that of country Y by 5% and 6% respectively.

A. 1B. 2C. 3D. 4

cat2001 logical-reasoning statement-sufficiency

Answer key

## 2.38.13 Statement Sufficiency: CAT 2001 | Question: 123 top

Choose 1 if the question can be answered by using one of the statements alone, but cannot be answered using the other statement alone.
Choose 2 if the question can be answered by using either statement alone.
Choose 3 if the question can be answered by using both statements together, but cannot be answered using either statement alone.
Choose 4 if the question cannot be answered even by using both statements together.

What is the value of X?

I. X and Y are unequal even integers, less than 10, and X/Y is an odd integer.
II. X and Y are even integers, each less than 10, and product of X and Y is 12.

A. 1 B. 2 C. 3 D. 4

cat2001 logical-reasoning statement-sufficiency

Answer key

## 2.38.14 Statement Sufficiency: CAT 2001 | Question: 124 top

Choose 1 if the question can be answered by using one of the statements alone, but cannot be answered using the other statement alone.
Choose 2 if the question can be answered by using either statement alone.
Choose 3 if the question can be answered by using both statements together, but cannot be answered using either statement alone.
Choose 4 if the question cannot be answered even by using both statements together.

On a given day a boat ferried 1500 passengers across the river in twelve hours. How many round trips did it make?

I. The boat can carry two hundred passengers at any time.
II. It takes 40 minutes each way and 20 minutes of waiting time at each terminal.

A. 1 B. 2 C. 3 D. 4

cat2001 logical-reasoning statement-sufficiency

Answer key

## 2.38.15 Statement Sufficiency: CAT 2001 | Question: 125 top

Choose 1 if the question can be answered by using one of the statements alone, but cannot be answered using the other statement alone.
Choose 2 if the question can be answered by using either statement alone.
Choose 3 if the question can be answered by using both statements together, but cannot be answered using either statement alone.
Choose 4 if the question cannot be answered even by using both statements together.

What will be the time for downloading software?

A. Transfer rate is 6 Kilobytes per second. B. The size of the software is 4.5 megabytes.

A. 1 B. 2 C. 3 D. 4

cat2001 logical-reasoning statement-sufficiency

Answer key

## 2.38.16 Statement Sufficiency: CAT 2001 | Question: 126 top

Choose 1 if the question can be answered by using one of the statements alone, but cannot be answered using the other statement alone.
Choose 2 if the question can be answered by using either statement alone.
Choose 3 if the question can be answered by using both statements together, but cannot be answered using either statement alone.
Choose 4 if the question cannot be answered even by using both statements together.

A square is inscribed in a circle. What is the difference between the area of the circle and that of the square?

I. The diameter of the circle is $25\sqrt{2}$ cm.
II. The side of the square is 25 cm.

A. 1 B. 2 C. 3 D. 4

cat2001 logical-reasoning statement-sufficiency

Answer key

## 2.38.17 Statement Sufficiency: CAT 2001 | Question: 127 top

Choose 1 if the question can be answered by using one of the statements alone, but cannot be answered using the other statement alone.
Choose 2 if the question can be answered by using either statement alone.
Choose 3 if the question can be answered by using both statements together, but cannot be answered using either statement alone.
Choose 4 if the question cannot be answered even by using both statements together.

Two friends, Ram and Gopal, bought apples from a wholesale dealer. How many apples did they buy?

I. Ram bought one-half the number of apples that Gopal bought.
II. The wholesale dealer had a stock of 500 apples.

A. 1 B. 2 C. 3 D. 4

cat2001 logical-reasoning statement-sufficiency

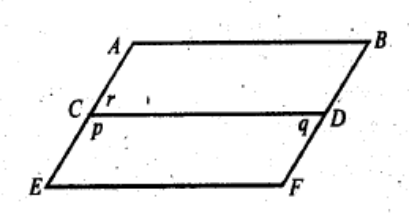
Answer key

## 2.38.18 Statement Sufficiency: CAT 2009 | Question: 36 top

Each of the following problems consists of a question and the statements labelled (1) and (2). You must decide whether the data given for the statements are sufficient to answer the questions.

If both ABDC and CDFE are parallelograms. what is $q + r$?

1. $r = 70$
2. $p = 110$



A. Statement (1) ALONE is sufficient, but statement (2) alone is not sufficient.
B. Statement (2) ALONE is sufficient, but statement (1) alone is not sufficient.
C. BOTH statements TOGETHER are sufficient, but NEITHER statement alone is sufficient.
D. EACH statement ALONE is sufficient.

cat2009 logical-reasoning statement-sufficiency

Answer key

## 2.38.19 Statement Sufficiency: CAT 2009 | Question: 37 top

Each of the following problems consists of a question and the statements labelled (1) and (2). You must decide whether the data given for the statements are sufficient to answer the questions.

A certain stadium is currently full to $\frac{13}{16}$ of its maximum seating capacity. What is the maximum seating capacity of the stadium?

1. If 1, 250 people were to enter the stadium, the stadium would be full to $\frac{15}{16}$ of its maximum seating capacity.
2. If 2, 500 people were to leave the stadium, the stadium would be full to $\frac{9}{16}$ of its maximum seating capacity.

A. Statement (1) ALONE is sufficient, but statement (2) alone is not sufficient.
B. Statement (2) ALONE is sufficient, but statement (1) alone is not sufficient.
C. BOTH statements TOGETHER are sufficient, but NEITHER statement alone is sufficient.
D. EACH statement ALONE is sufficient.

Answer key

## 2.38.20 Statement Sufficiency: CAT 2009 | Question: 38 top

Each of the following problems consists of a question and the statements labelled (1) and (2). You must decide whether the data given for the statements are sufficient to answer the questions.

If $n$ is an integer, is $n$ even?

1. $2n$ is an even integer.
2. $n - 1$ is an odd integer.

A. Statement (1) ALONE is sufficient, but statement (2) alone is not sufficient.
B. Statement (2) ALONE is sufficient, but statement (1) alone is not sufficient.
C. BOTH statements TOGETHER are sufficient, but NEITHER statement alone is sufficient.
D. EACH statement ALONE is sufficient.

cat2009 logical-reasoning statement-sufficiency

Answer key

## 2.38.21 Statement Sufficiency: CAT 2009 | Question: 39 top

Each of the following problems consists of a question and the statements labelled (1) and (2). You must decide whether the data given for the statements are sufficient to answer the questions.

What is the value of $x$?

1. $x^2 - 5x + 4 = 0$
2. $x$ is not prime.

A. Statement (1) ALONE is sufficient, but statement (2) alone is not sufficient.
B. Statement (2) ALONE is sufficient, but statement (1) alone is not sufficient.
C. BOTH statements TOGETHER are sufficient, but NEITHER statement alone is sufficient.
D. Statement (1) and (2) TOGETHER are NOT sufficient.

cat2009 logical-reasoning statement-sufficiency

## 2.38.22 Statement Sufficiency: CAT 2009 | Question: 40 top

Each of the following problems consists of a question and the statements labelled (1) and (2). You must decide whether the data given for the statements are sufficient to answer the questions.

A fish tanks contains a number of fish, including 5 Fantails. If two fish are selected from the tank at random, what is the probability that both will be Fantails?

1. The probability that the first fish chosen will be Fantail is $\frac{1}{2}$.
2. The probability that the second fish chosen will be Fantail is $\frac{4}{9}$.

A. Statement (1) ALONE is sufficient, but statement (2) alone is not sufficient.
B. Statement (2) ALONE is sufficient, but statement (1) alone is not sufficient.
C. BOTH statements TOGETHER are sufficient, but NEITHER statement alone is sufficient.
D. EACH statement ALONE is sufficient.

### 2.38.23 Statement Sufficiency: CAT 2016 | Question: 66 top

The table below presents the revenue (in million rupees) of four firms in three states. These firms, Honest Ltd., Aggressive Ltd., Truthful Ltd. and Profitable Ltd. are disguised in the table as A, B, C and D, in no particular order.

| States | Firm A | Firm B | Firm C | Firm D |
|---|---|---|---|---|
| UP | 49 | 82 | 80 | 55 |
| Bihar | 69 | 72 | 70 | 65 |
| MP | 72 | 63 | 72 | 65 |

Further, it is known that: In the state of MP, Truthful Ltd. has the highest market share. Aggressive Ltd.'s aggregate revenue differs from Honest Ltd.'s by Rs. 5 million.

If Profitable Ltd.'s lowest revenue is from UP, then which of the following is true?

A. Truthful Ltd.'s lowest revenues are from MP.
B. Truthful Ltd.'s lowest revenues are from Bihar.
C. Truthful Ltd.'s lowest revenues are from UP.
D. No definite conclusion is possible.

### 2.39.2 Statements Conclusions: CAT 2001 | Question: 136 top

**Answer below questions based on the following information:**
Elle is three times older than Yogesh. Zaheer is half the age of Wahida. Yogesh is older than Zaheer.

Which of the following information will be sufficient to estimate Elle's age?

A. Zaheer is 10 years old.
B. Both Yogesh and Wahida are older than Zaheer by the same number of years.
C. Both A and B above
D. None of the above

cat2001 logical-reasoning statements-conclusions

### 2.39.3 Statements Conclusions: CAT 2018 Set-1 | Question: 63 top

Twenty four people are part of three committees which are to look at research, teaching, and administration respectively. No two committees have any member in common. No two committees are of the same size. Each committee has three types of people: bureaucrats, educationalists, and politicians, with at least one from each of the three types in each committee. The following facts are also known about the committees:

1. The numbers of bureaucrats in the research and teaching committees are equal, while the number of bureaucrats in the research committee is 75% of the number of bureaucrats in the administration committee.
2. The number of educationalists in the teaching committee is less than the number of educationalists in the research committee. The number of educationalists in the research committee is the average of the numbers of educationalists in the other two committees.
3. 60% of the politicians are in the administration committee, and 20% are in the teaching committee.

Based on the given information, which of the following statements MUST be FALSE?

A. The size of the research committee is less than the size of the administration committee.
B. In the teaching committee the number of educationalists is equal to the number of politicians.
C. In the administration committee the number of bureaucrats is equal to the number of educationalists.
D. The size of the research committee is less than the size of the teaching committee.

cat2018-1 logical-reasoning statements-conclusions

### 2.39.4 Statements Conclusions: CAT 2018 Set-1 | Question: 64 top

## 2.39.10 Statements Conclusions: Read the statements and answer the questions top

Each of the questions below consists of a question and two statements numbered I and II given below it. You have to decide whether the data provided in the statements are sufficient to answer the question. Read both the statements and
Give answer (1) if the data in statement I alone are sufficient to answer the question, while the data in statement II alone are not sufficient to answer the question.
Give answer (2) if the data statement II alone are sufficient to answer the question, while the data in statement I alone are not sufficient to answer the equation.
Give answer (3) if the data either in statement I alone or in statement II alone are sufficient to answer the question.
Give answer (4) if the data given in both the statements I & II together are not sufficient to answer the question
Give answer (5) if the data in both the statements I & II together are necessary to answer the question.

1. Village P is towards which direction of village R?
I. Village R is to the South-East of village T and T is to the North of village?
II. Village Q is to the South of village P and to the South-West of village R.

2. Who among A, B, C, D and E, each having a different height, is the third tallest?
I. E is shorter than only B.
II. C is taller than only A.

3. How many sisters does K have?
I. M is sister of K.
II. K's mother has three children.

4. If a row of thirty students facing North, what is R's position from the left end?
I. There are twelve students between R and Q.
II. T is tenth from the right end
and there are sixteen students between T and R.

5. How is 'go' written in a code language?
I. 'go over there' is written as 'pa da na' in that code language.
II. 'go and sit' is written as 'sa ka pa' in that code language

statements-conclusions

## 2.39.11 Statements Conclusions: Read the statements of symbols and their meanings top

In the following questions, the symbols ©, δ , $, * and % are used with the following meaning as illustrated below:
'P δ Q' means 'P is not greater than Q'.
'P % Q' means 'P is not smaller than Q'.
'P © Q' means 'P is neither greater than nor smaller than Q.
'P * Q' means 'P is smaller than Q'.

Now in each of the following questions assuming the given statements to be true, find which of the two conclusions I and II given below them is/are definitely true?

Give answer (1) if only Conclusion I is true.
Give answer (2) is if only Conclusion II is true.
Give answer (3) is either Conclusion I or II is true.
Give answer (4) if neither Conclusion I nor II is true.
Give answer (5) if both Conclusions I and II are true.

1. Statements :
R $ J
J % M,
M © K

Conclusions :
I. K © J
II. K * J

2. Statements :
D δ R
M $ R
M © F

Conclusions :

Answer key

## 2.39.13 Statements Conclusions: read provided information and make decision

Following are the conditions for selecting Accounts Officer in an organization:

The candidate must—
(i) be at least 21 years and not more than 26 years as on 1.11.2011.
(ii) be a commerce graduate (B.Com.) with at least 55% aggregate marks.
(iii) have work experience of at least 2 years in theAccounts department of an organization
(iv) have secured at least 50% marks in the selection process.

In the case of a candidate who fulfils all the conditions except—

(a) at (i) above but at least 21 years old and not more than 28 years old and has work experience of five as Accounts Assistant in an organization, his/her case is to be referred to GM-Account.
(b) at (ii) above, but has secured at least 59% aggregate marks in graduation and has secured at least 55% marks in the selection process, his/her case is to be referred to VP-Accounts.

In each question below, details of one candidate are provided. You have to take one of the following courses of action based on the conditions given above theinformation provided in each question and mark the number of the course of action as your answer.
You are not to assume anything otherthan the information provided in each question. All these cases are given to you as on 1.11.2011

Mark answer (1) if the case is to be referred to GMAccounts
Mark answer (2) if the case is to be referred to VPAccounts
Mark answer (3) if the candidate is to be selected.
Mark answer (4) if the candidate is not to be selected.
Mark answer (5) if the data provided are inadequate to take a decision.

1. Umesh Choksi was born on 25th November 1989. He has secured 60% aggregate marks in B.Com. and 65% marks in the

Selection Process. He has been working in the Accounts department of an organization for the past three years.

2. Pratibha Kale was born of 6th June 1988. She has secured 60% aggregate marks in B.Com. and 49% marks in the Selection Process. She has been working in the AccountsDepartment of an organization for the past three years.

3. Arun Patil has secured 55% aggregate marks in graduation. He has been working for past four years in the Accounts department of organization. He has secured 50% marks in the Selection process/ he was born on 12th July 1988.

4. Prabha Dixit was born on 18th April 1985. She has been working as Accounts Assistant in an organization for the past five years. She has secured 60% aggregate marks in B.Com. and 55% marks in the Selection Process.

5. Amul Verma has secured 50% aggregate marks in B.Com. and 50% marks in the Selection process. He has been working in the Accounts department of an organization for past four years. He was born on 2nd January 1987.

## 2.39.14 Statements Conclusions: statements and conclusions top

In each question below are two statements followed by two conclusions numbered I and II. You have to take the two given statements to be true even if they seem to be at variance from known facts and then decide which of the given conclusions logically commonly follows from the given statements disregarding commonly known facts.

Give answer(1) if only conclusion I follows.
Give answer(2) if only conclusion II follows.
Give answer (3) if either conclusion I or II follows.
Give answer (4) if neither conclusion I nor II follows.
Give answer (5) if both conclusions I and II follows.

1. Statements :
Some gears are wheels. All wheels are brakes.

Conclusions :
I. No brake is gear
II. Atleast some gears are brakes.

2. Statements :
No month is a year. No year is a second.

Conclusions :
I. All months are seconds.
II. No second is month.

3. Statements :
No plane is hill. Some hills are towns.

Conclusions :
I. No town is plane.
II. Some towns are plane.

4. Statements :
All metals are liquids. All liquids are gases.

Conclusions :
I. All metals are gases.
II. Atleast some gases are liquids.

5. Statements :
Some cities are towns. Some villages are cities.

Conclusions :
I. Atleast some villages are towns.
II. No village is a town

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.7 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 15 top

Human communication that modifies the attitudes and behaviors of others in order to meet group goals and needs is the definition of :

A. Leadership B. A leader C. Group goals D. Group dynamics

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.8 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 16 top

The promise of behavioral theories of leadership held that this would be possible:

A. picking a leader out of the crowd
B. being able to train a person to be a leader
C. explaining why successful leaders are so successful
D. eliminating ineffective leaders

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.9 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 17 top

Which function of attitudes serves to express an individual's central values and self-concept?

A. knowledge function
B. value- expressive function
C. utilitarian function
D. ego-defensive function

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.10 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 18 top

_____ is/are the determining factor on whether a leader is charismatic or not:

A. The self-confidence of the leader
B. Being a people person
C. The perceptions of the people being led
D. The risks the leader takes

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.11 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 19 top

SAM(Self-Assessment Manikin) is used to assess which component of attitude?

A. cognitive B. affective C. behavioral D. orientation

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.12 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 2 top

Research suggests that to change health habits through persuasion, we should alter people's attitudes toward:

A. specific health practices
B. the general concept of "health fitness"
C. health authorities
D. the value of life itself

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.13 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 20 top

The capacity to influence people and accomplish desired objectives is called:

A. Power B. Leadership C. Authority D. Status

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.14 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 21 top

Based on recent social-psychological research, which of the following statements is true?

A. our attitudes and our behavior are unrelated
B. our attitudes determine our behavior but our behavior does not determine our attitudes
C. our behavior determines our attitudes do not determine our behavior
D. under certain circumstances attitudes do predict behavior

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.15 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 22 top

Feelings or emotional reactions to an object reflect the_____component of an attitude.

A. knowledge B. cognitive C. affective D. behavioral

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.16 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 23 top

Which source of power comes from what others believe a member knows or can do?

A. Expert Power
B. Referent Power
C. Legitimate Power
D. Designated Power

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.17 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 24 top

Which of the following types of leader is most likely to say whatever the group does is fine with him or her?

A. laissez-faire leaders
B. democratic leaders
C. autocratic leaders
D. designated leaders

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.18 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 25 top

All of the following traits of managers who exhibit openness to experience except:

A. Imaginative
B. Narrow-minded
C. Curious
D. Artistically Sensitive

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.19 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 26 top

Appropriate leader behaviors in a group are shaped by the _____of the group

A. Traits B. Needs C. Behaviour D. Style

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.20 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 27 top

According to the text, our attitudes will predict our behavior if:

A. we are made aware of social norms
B. the attitudes are unrelated to central values
C. as we act, we are conscious of our attitudes
D. we feel anxious or insecure

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.21 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 28 top

Which component of attitude represents one's tendency to respond in a certain manner toward an object or activity?

A. cognitive B. affective C. behavioral D. personality

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.22 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 29 top

_____consists of trustworthiness and expertise.

A. A two-sided massage
B. The two routes to persuasion
C. Message appeal
D. Source credibility

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.23 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 3 top

The most successful early trait theories focused on _____.

A. traits of famous leaders
B. traits of followers
C. traits associated with leadership
D. traits with distinguish leaders from non-leaders

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.24 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 30 top

The "ABC's of attitudes" refers to:

A. aptitudes, brainwashing, and cognition
B. attraction, behavior, and compliance
C. affect,behavior and cognition
D. affect, bogus pipeline, and cognitive dissonance

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.25 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 4 top

Which component of attitudes consists of a consumer's beliefs about an object?

A. affective B. cognitive C. factual D. behavioral

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.26 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 5 top

Which of the following is a technique for measuring attitudes?

A. self-monitoring pipeline
B. foot-in-the-door phenomenon
C. low-ball technique
D. bogus pipeline

nielit2019feb-scientistc attitude-and-leadership

### 3.1.27 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 6 top

_____people readily adjust their behavior in response to external circumstances.

A. Self-monitoring B. Depressed C. Unintelligent D. Elderly

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.28 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 7 top

According to self-perception theory, behavior shapes attitudes:

A. only of self-monitoring people
B. when behavior is inconsistent with attitudes
C. when attitudes are weak and ambiguous
D. only in the area of politics and religion

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.29 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 8 top

The tendency for oppressors to disparage their victims is given in the text as an example of:

A. how attitudes determine behavior
B. how behavior determines attitudes
C. the low-balling effect
D. how role playing comes to shape one's self-identity

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.30 Attitude And Leadership: NIELIT 2019 Feb Scientist C - Section E: 9 top

A person in a group that is elected or appointed to a leadership position is called a:

A. leader
B. designated leader
C. referent leader
D. expert leader

nielit2019feb-scientistc attitude-and-leadership

Answer key

### 3.1.31 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 1 top

_____ is the definition of reference groups.

A. Groups that an individual looks to when forming attitudes and opinions
B. Groups of people who have been referred to by someone they know
C. Groups of office colleagues
D. Chat groups on the internet

nielit2019feb-scientistd attitude-and-leadership

Answer key

### 3.1.32 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 10 top

Frustration arises from the gap between _____ and _____.

A. belief; behavior
B. learning; behaviour
C. expectations; attainments
D. behaviour; attitudes

nielit2019feb-scientistd attitude-and-leadership

Answer key

### 3.1.33 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 11 top

According to the text, Lee lococca of Chrysler and Pat Farrah of Home Depot exhibited what type of leadership ?

A. Transactional
B. Transformational
C. Autocratic
D. Contingency

nielit2019feb-scientistd attitude-and-leadership

Answer key

### 3.1.34 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 12 top

What is post-heroic leadership theory ?

A. A theory which states that there is too much emphasis on leaders and more attention should be placed on followers

B. A theory looking beyond current leadership styles to new, more creative ways of leading
C. A theory which tries to create new organizations which do not need leaders
D. A theory which tries to find the ideal form of leadership

nielit2019feb-scientistd attitude-and-leadership

Answer key

### 3.1.35 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 13 top

For the Ohio State leadership studies the perfect leader :

A. Combines a focus on the task and the employee
B. Focuses on the task and getting things done
C. Inspires workers to aim higher and achieve more
D. Is concerned about the small details and how to increase productivity

nielit2019feb-scientistd attitude-and-leadership

### 3.1.36 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 14 top

Leadership is _____.

A. the process of influencing a group toward the achievement of goals
B. a group that achieves goals
C. the function of influencing a group towards the achievement of goals
D. directing a group towards the achievement of goals

nielit2019feb-scientistd attitude-and-leadership

Answer key

### 3.1.37 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 15 top

Contingency theory is based on the assumption that the ideal leader :

A. Shapes their leadership style depending on the situation
B. Provides clear instructions to the followers so that they know what they are doing
C. Knows what their strengths are and makes the most out of them
D. Spends time with their followers and therefore listens and responds to their needs

nielit2019feb-scientistd attitude-and-leadership

Answer key

### 3.1.38 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 16 top

A leadership theory that focuses on the traits of those who have assumed powers and who are considered to be effective is called :

A. trait theories
B. behavioral theories
C. contingency theories
D. structural theories

nielit2019feb-scientistd attitude-and-leadership

Answer key

### 3.1.39 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 17 top

What is the social construction of leadership?

A. The view that all leadership is social and what matters is how leaders interact with others
B. Leadership is a made up idea that therefore we should pay more attention to more significant aspects of the organization
C. What counts as good leadership is a construction of the perceptions of the followers
D. Leadership is something that the leader constructs as they meet with others

nielit2019feb-scientistd attitude-and-leadership

### 3.1.40 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 18 top

A student states that he supports gun ownership by individuals. In speech class, his teacher assigns him to present a persuasive speech on abolishing gun ownership by individuals. After arguing the opposing side, he finds his initially favorable attitude is changing. This can best be explained by :

A. attitude incongruity
B. the attitude-behavior dissimilarity theory
C. attitude inoculation
D. cognitive dissonance theory

nielit2019feb-scientistd attitude-and-leadership

### 3.1.41 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 19 top

A transactional leader is one who:

A. Inspires people and has strong interactions with them
B. Does deals with people in order to get them to do things the leader wants
C. Is the ideal form of leadership
D. Works for long term goals of the organization

nielit2019feb-scientistd attitude-and-leadership

### 3.1.42 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 2 top

According to Mintzberg, one of management's interpersonal roles is _____.

A. Spokesperson B. Leader C. Negotiator D. Monitor

nielit2019feb-scientistd attitude-and-leadership

Answer key

### 3.1.43 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 20 top

When our behavior is out of sync with our attitudes it is called :

A. attitude incongruity
B. the attitude-behavior dissimilarity theory
C. attitude inoculation
D. cognitive dissonance

nielit2019feb-scientistd attitude-and-leadership

### 3.1.44 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 21 top

The ability to influence people through granting or withholding benefits that are of interest to them is called :

A. reward power
B. coercive power
C. export power
D. reference power

nielit2019feb-scientistd attitude-and-leadership

### 3.1.45 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 22 top

_____ is that part of an attitude that's made up of the beliefs, opinions, knowledge or information held by a person.

A. Behavioural component
B. Cognitive component
C. Affective components
D. None of the above

nielit2019feb-scientistd attitude-and-leadership

### 3.1.46 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 23 top

Coercive power may occur in which of the following organizations ?

A. service firm
B. non-profit organization
C. manufacturing firm
D. all of the above

nielit2019feb-scientistd attitude-and-leadership

Answer key

### 3.1.47 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 24 top

People who act like “social chameleons” – those who seem to change behavior and attitudes to fit every situation they’re in – are generally considered :

A. low self-monitors
B. high self-monitors
C. to be using the self-serving bias
D. high in self-efficacy

nielit2019feb-scientistd attitude-and-leadership

Answer key

### 3.1.48 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 25 top

Feelings or emotional reactions to an object reflect the _____ components of an attitude.

A. knowledge B. cognitive C. affective D. behavioral

nielit2019feb-scientistd attitude-and-leadership

Answer key

### 3.1.49 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 26 top

_____ has become increasingly important for developing a marketing strategy in recent years.

A. Change in consumers attitudes
B. Inflation of the dollar
C. The concept and the brand
D. Age groups, such as the teen market, baby boomers, and the mature market

nielit2019feb-scientistd attitude-and-leadership

Answer key

### 3.1.50 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 27 top

The emotional part of an attitude is called _____ .

A. Affective component
B. Attitude
C. Behavioural component
D. All of the above

nielit2019feb-scientistd attitude-and-leadership

Answer key

### 3.1.51 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 28 top

Persuasion is :

A. the process by which a message induces attitude change
B. a change in behavior or belief as a result of real or imagined group pressure
C. the process by which a message induces a change in behavior
D. a change in behavior or belief as a result of a direct order from someone

nielit2019feb-scientistd attitude-and-leadership

### 3.1.52 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 29 top

A leadership theory that postulates that an effective leader is one who develops a variety of leadership styles, and in each situation applies the style that best fits the circumstance.

A. Vroom-Jago model
B. Path goal theory
C. *LPC* theory
D. None of the above

nielit2019feb-scientistd attitude-and-leadership

Answer key

### 3.1.53 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 3 top

Which of the following represent the three components of attitudes ?

A. primary, secondary and tertiary
B. knowledge, value-expressive and

C. cognitive, affective, and behavioral
D. cognitive, utilitarian value-expressive, and behavioral

nielit2019feb-scientistd attitude-and-leadership

Answer key

### 3.1.54 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 30 top

Self-perception theory argues that people will adopt attitudes consistent with behaviors in order to :

A. figure out the dominant response
B. reduce tension
C. determine how they should behave
D. create good impressions

nielit2019feb-scientistd attitude-and-leadership

### 3.1.55 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 4 top

Which of these is not a principle of great man theory?

A. Leaders are born not made
B. Great men rise up in times of crisis
C. We can learn from the biographies of great leaders
D. A great leader is only great in certain situations

nielit2019feb-scientistd attitude-and-leadership

Answer key

### 3.1.56 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 5 top

An investigator who wishes to study the attitudes of people in Illinois identifies 1,000 people in Illinois, taking care that the percentages of male and female, black and white, young and old are the same in the sample as in state's total population. What kind of sample is the investigator trying to obtain ?

A. an independent sample
B. a dependent sample
C. a random sample
D. a representative sample

nielit2019feb-scientistd attitude-and-leadership

Answer key

### 3.1.57 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 6 top

_____ portrays the " whole person" interacting with his or her environment.

A. Attitude B. Personality C. Lifestyle D. Self-concept

nielit2019feb-scientistd attitude-and-leadership

Answer key

### 3.1.58 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 7 top

Michael is a type of manager who is Concerned primarily with accomplishing goals and objectives and concentrates on the task itself. His behavioral style is called :

A. authoritarian
B. democratic
C. task oriented
D. people oriented

nielit2019feb-scientistd attitude-and-leadership

Answer key

### 3.1.59 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 8 top

Which of the following is a component of Mary's attitude toward smoking ?

A. Mary believes smoking is harmful to one's health
B. Mary dislikes the fact that people are permitted to smoke in vehicles of public transportation
C. Mary is actively working for legislation which would outlaw the sale of cigarettes
D. all of the above are part of Mary's attitude toward smoking

nielit2019feb-scientistd attitude-and-leadership

Answer key

### 3.1.60 Attitude And Leadership: NIELIT 2019 Feb Scientist D - Section E: 9 top

The capacity to influence people and accomplish desired objectives is called :

A. Power B. Leadership C. Authority D. Status

nielit2019feb-scientistd attitude-and-leadership

### 4.0.1 time and distance (self doubts) top

A boy ride his bicycle of 10 km at an average speed of 12 km/hr and again travels 12 km at an average speed of 10 km/hr his average speed for the entire trip is approx.

Answer key

### 4.0.2 self doubt top

In a Conventional Clock, how many times does the minutes hand pass the hour hand between noon and midnight?

Answer key

## 4.1 Abbreviations (3) top

### 4.1.1 Abbreviations: In Windows ME what does ME stand for? top

In Windows ME what does ME stand for?

1. Millennium
2. Micro-Expert
3. Macro-Expert
4. Multi-Expert
5. My-Expert

computer-knowledge abbreviations

Answer key

### 4.1.2 Abbreviations: RAM stands for top

RAM stands for

1. Random Access Memory
2. Ready Application Module
3. Read Access Memory
4. Remote Access Machine
5. None of these

computer-knowledge abbreviations

Answer key

### 4.1.3 Abbreviations: abbreviation KB means top

The computer abbreviation KB usually means

1. Key Block
2. Kernel Boot
3. Kilo Byte
4. Kit Bit
5. None of these

computer-knowledge abbreviations

Answer key

## 4.2 Compilers (1) top

### 4.2.1 Compilers: Which is not true about a compiler? top

A. It converts one statement of a program into machine language.

B.An object code produced by a compiler is permanently saved for future.

C.It reports all errors in a program with line numbers.

D.It produces faster object code than an interpreter.

computer-knowledge compilers

Answer key

## 4.3 Computer Knowledge (46) top

### 4.3.1 Computer Knowledge: A ___ is an example of an input device top

A ___ is an example of an input device

1. printer
2. monitor
3. scanner
4. central processing unit
5. none of these

computer-knowledge

Answer key

### 4.3.2 Computer Knowledge: A computer's ROM is top

A computer's ROM is

1. ALU
2. computer software
3. operating system
4. computer hardware
5. CPU

computer-knowledge

Answer key

### 4.3.3 Computer Knowledge: A hard copy of a document is top

A hard copy of a document is

1. printed on the printer
2. stored on the floppy
3. stored on a CD
4. stored in hard disk
5. scanned

computer-knowledge

Answer key

### 4.3.4 Computer Knowledge: A set of instruction telling computer what to do is called top

A set of instruction telling computer what to do is called

1. mentor
2. instruction
3. compiler
4. program
5. none of these

computer-knowledge

Answer key

### 4.3.5 Computer Knowledge: A translator program used in assembly language is called top

A translator program used in assembly language is called

1. Compiler
2. Assembler
3. Interpreter
4. Translator
5. Operating System

computer-knowledge

Answer key

### 4.3.6 Computer Knowledge: A word processor would be used best to top

A word processor would be used best to

1. plant a picture
2. draw a diagram
3. type a story
4. work out income and expenses
5. none of these

computer-knowledge

Answer key

### 4.3.7 Computer Knowledge: ALU performs top

The ALU performs _____ operations

1. logarithm-based
2. ASCII
3. algorithm-based
4. arithmetic
5. None of these

computer-knowledge

Answer key

### 4.3.8 Computer Knowledge: Clicking right mouse button top

What do you see when you click right mouse button

1. The same effect as the left click
2. A special menu
3. No effect
4. A mouse cannot be right-clicked
5. Computer goes to sleep mode

computer-knowledge

Answer key

### 4.3.9 Computer Knowledge: Common name for modulator-demodulator top

The common name for a modulator-demodulator is

1. modem
2. joiner
3. networker
4. connector
5. demod

computer-knowledge

Answer key

### 4.3.10 Computer Knowledge: Data is organized in a worksheet as top

Data is organized in a worksheet as

1. Charts and diagrams
2. Rows and columns
3. Tables and boxes
4. Graphs
5. None of these

computer-knowledge

Answer key

### 4.3.11 Computer Knowledge: Editing a document that has been created means top

Editing a document that has been created means

1. saving it
2. printing it
3. scanning it
4. correcting it
5. none of these

computer-knowledge

Answer key

### 4.3.12 Computer Knowledge: Example of a binary number top

Which of the following is an example of a binary number

1. 6AH1
2. 100101
3. 005
4. ABCD
5. 23456

computer-knowledge

Answer key

### 4.3.13 Computer Knowledge: Fastest, biggest and most expensive computers top

Which one of the following refers to the fastest, biggest and most expensive computers

1. Notebooks
2. Personal computers
3. Laptops
4. Super computers
5. PDAs

computer-knowledge

Answer key

### 4.3.14 Computer Knowledge: How many kilobytes make a megabyte? top

How many kilobytes make a megabyte?

1. 128
2. 1024
3. 256
4. 512
5. 64

computer-knowledge

Answer key

### 4.3.15 Computer Knowledge: How to delete a sentence top

In order to delete a sentence from a document you would use

1. highlight and copy
2. cut and paste
3. copy and paste
4. highlight and delete
5. select and paste

computer-knowledge

Answer key

### 4.3.16 Computer Knowledge: In a computer most processing takes place in top

In a computer most processing takes place in

1. Memory
2. RAM
3. Motherboard
4. CPU
5. None of these

computer-knowledge

Answer key

### 4.3.17 Computer Knowledge: Menu to print the document in Word top

In Word, Which menu would the user select to print the document?

1. Tools
2. Files
3. View
4. Window
5. None of these

computer-knowledge

Answer key

### 4.3.18 Computer Knowledge: NIELIT 2016 MAR Scientist D: 100 top

ICA (in computational intelligence) stands for

A. Intermediate Computational Algorithms
B. Immediate Computation and Analysis
C. Independent Component Analysis
D. Independent Computational Algorithms

URKUND is a

A. Lexical Analyser
B. Emulator
C. Plagiarism checker
D. Big data analytic tool

nielit2016mar-scientistd computer-knowledge

Answer key

### 4.3.25 Computer Knowledge: NIELIT 2016 MAR Scientist D: 86 top

Which Computer Program was claimed to beat Turing test

A. Eugene Groostman B. Deep Blue C. AI D. Trueman

nielit2016mar-scientistd computer-knowledge

Answer key

### 4.3.26 Computer Knowledge: NIELIT 2016 MAR Scientist D: 87 top

Who gave the (so-called) Three laws of Robotics

A. von Neumann B. Issac Asimov C. Alan Turing D. Sabeer Bhatia

nielit2016mar-scientistd computer-knowledge

Answer key

### 4.3.27 Computer Knowledge: NIELIT 2016 MAR Scientist D: 90 top

Quantum computers are assessed to be _____

A. Supra – Turing Machine
B. Sub – Turing Machine
C. Equivalent to Turing Machine
D. Equivalent to Push – Down Automata

nielit2016mar-scientistd computer-knowledge

### 4.3.28 Computer Knowledge: NIELIT 2016 MAR Scientist D: 92 top

The concept of semantic web was proposed / given by _____

A. Ullman B. Ravi Sethi C. Time Berners Lee D. Donald Knuth

nielit2016mar-scientistd computer-knowledge

Answer key

### 4.3.29 Computer Knowledge: NIELIT 2016 MAR Scientist D: 97 top

Self Organizing Maps are

A. A type of satistical tool for data analysis
B. A type of Aritificial Neural Networks
C. A type of particle Swarm Algorithm
D. None of the above

nielit2016mar-scientistd computer-knowledge

Answer key

### 4.3.30 Computer Knowledge: NIELIT 2016 MAR Scientist D: 98 top

Hopfield networks are a type of _____.

A. Giga bit network
B. Terra bit network
C. Artificial neural network
D. Wireless network

nielit2016mar-scientistd computer-knowledge

Answer key

### 4.3.31 Computer Knowledge: NIELIT 2016 MAR Scientist D: 99 top

Sigmoidal feedforward artificial neural networks with one hidden layer can / are _____

A. approximate any continuous function
B. approximate any dis-continuous function
C. approximate any continuous function and its derivatives of arbitrary order
D. exact modeling technique

Answer key

### 4.3.32 Computer Knowledge: Printers and monitors are considered to be top

Peripherals devices such as printers and monitors are considered to be

1. data
2. software
3. hardware
4. information
5. none of these

computer-knowledge

Answer key

### 4.3.33 Computer Knowledge: Restarting a computer that is already on is referred to as top

Restarting a computer that is already on is referred to as

A. Logging Off B. Cold booting C. Shut down D. Warm booting E. Shutting Off

computer-knowledge

Answer key

### 4.3.34 Computer Knowledge: Spell Check will find errors in which of the following top

Spell Check will find errors in which of the following?

1. Today is a rainy day
2. Today is a rainy a day
3. Is a rainy
4. Rainy today a day
5. None of these

computer-knowledge

### 4.3.35 Computer Knowledge: The term "host" with respect to the internet, means top

The term "host" with respect to the internet, means

1. A computer that is stand alone computer
2. A computer that is connected to the internet
3. A computer reserved for use by the host
4. A large collection of computers
5. Hyperlink

computer-knowledge

Answer key

### 4.3.36 Computer Knowledge: This is a part of a computer system that one cannot touch? top

This is a part of a computer system that one cannot touch?

1. hardware
2. printer
3. mouse
4. scanner
5. software

computer-knowledge

Answer key

### 4.3.37 Computer Knowledge: Using Booth's Algorithm for multiplication, the multiplier -57 will be recoded as top

computer-knowledge digital-logic

Answer key

### 4.3.38 Computer Knowledge: Which is not a basic function of a computer? top

Which is not a basic function of a computer?

1. Accept and process data
2. Accept input
3. Process data
4. Store data
5. Scan text

computer-knowledge

Answer key

### 4.3.39 Computer Knowledge: Which is not a storage medium top

Which of the following is not a storage medium?

1. hard disk
2. flash drive
3. DVD
4. CD
5. Keyboard

computer-knowledge

Answer key

### 4.3.40 Computer Knowledge: Which language is directly understood by the computer without translation program? top

Which language is directly understood by the computer without translation program?

1. BASIC language
2. Assembly language
3. High level language
4. C language
5. Machine language

computer-knowledge

Answer key

### 4.3.41 Computer Knowledge: Which of the following is NOT true about a compiler? top

Which of the following is NOT true about a compiler?

1. Translates instructions from a high level language to machine level language
2. Translates entire source program into machine language program
3. It is involved in program's execution
4. Is a translating program
5. Is useful to run program

computer-knowledge

Answer key

### 4.3.42 Computer Knowledge: Which of the following is required to create an HTML document? top

Which of the following is required to create an HTML document?

1. browser
2. internet
3. text editor
4. search engine
5. none of these

computer-knowledge

Answer key

### 4.3.43 Computer Knowledge: Which of the following refers to the process of a computer receiving information from a server on the Internet? top

Which of the following refers to the process of a computer receiving information from a server on the Internet?

1. gathering
2. uploading
3. inputting
4. outputting
5. downloading

computer-knowledge

Answer key

### 4.3.44 Computer Knowledge: ___ consists of volatile chips that temporarily store data or instructions top

___ consists of  volatile chips that temporarily store data or instructions

1. CPU
2. ROM
3. RMA
4. RAM
5. None of these

computer-knowledge

Answer key

### 4.3.45 Computer Knowledge: how many bits does a nibble signify top

In a computer, how many bits does a nibble signify?

1. 4
2. 8
3. 16
4. 32
5. 64

computer-knowledge

Answer key

### 4.3.46 Computer Knowledge: the instruction phase followed by the execution phase is referred to as top

When machine instructions are being executed by a computer, the instruction phase followed by the execution phase is referred to as

1. program cycle
2. machine instruction
3. execution cycle
4. task cycle
5. machine cycle

computer-knowledge

Answer key

## 4.4 Devices (1) top

### 4.4.1 Devices: Keyboards, scanner and microphones are examples of top

Keyboards, scanner and microphones are examples of

1. software programs
2. input devices
3. output devices
4. utilities
5. none of these

computer-knowledge devices

Answer key

## 4.5 Excel Ability (6) top

### 4.5.1 Excel Ability: Excel is a program that is used to prepare a top

Excel is a program that is used to prepare a

1. Database
2. Text document
3. Spreadsheet
4. Slide Presentation
5. None of these

computer-knowledge excel-ability

Answer key

### 4.5.2 Excel Ability: In Excel, how the contents and attributes of a cell or range of cell have to be erased top

In Excel, when the contents and attributes of a cell or range of cell have to be erased using the menu, the user must

1. Select the cells, choose Edit, and select Clear, the All
2. Select the cells, and click delete on the keyboard
3. Select the cells, choose Tools and select Clear the Format

4. Select the cells, choose Tools, and select Formula Audit, the Delete
5. None of these

computer-knowledge excel-ability

Answer key

### 4.5.3 Excel Ability: Which of the following identifies a cell in Excel? top

Which of the following identifies a cell in Excel?

1. Formula
2. Name
3. Label
4. Address
5. None of these

computer-knowledge excel-ability

Answer key

### 4.5.4 Excel Ability: contents of the active cells are displayed in top

In Excel, contents of the active cells are displayed in the

1. footer bar
2. tool bar
3. task bar
4. menu bar
5. formula bar

computer-knowledge excel-ability

Answer key

### 4.5.5 Excel Ability: key to use when selecting multiple sheets in an Excel top

Which selecting multiple worksheets in Excel, the following key must also be used when clicking the sheet tab

1. Shift
2. Alt
3. Ctrl
4. Insert
5. Esc

computer-knowledge excel-ability

Answer key

### 4.5.6 Excel Ability: operation of combining two cells into a single cell in Excel is referred as top

The operation of combining two cells into a single cell in Excel is referred as ___

1. Join cells
2. Merge cells

3. Merge table
4. Join table
5. None of these

computer-knowledge excel-ability

Answer key

## 4.6 Excel Powerpoint (1) top

### 4.6.1 Excel Powerpoint: Linking excel worksheet to powerpoint top

If an Excel Worksheet is to be linked for use in PowerPoint presentation, the following should be clicked

1. Edit, Paste Special
2. Edit, Paste
3. Edit, Copy
4. File, Copy
5. None of these

computer-knowledge excel-powerpoint

## 4.7 Files (2) top

### 4.7.1 Files: Which is not true about computer files? top

Which of the following is NOT true about computer files?

1. They are collections of data saved to a storage medium
2. Every file has a file name
3. File extension is established by the user to indicate the data it was created
4. Usually files contain data
5. None of these

computer-knowledge files

Answer key

### 4.7.2 Files: to store a large number of files in a small of amount of storage space top

Which of the following can be used to store a large number of files in a small of amount of storage space?

1. File adjustment
2. File copying
3. File reading
4. File compatibility
5. File compression

computer-knowledge files

Answer key

## 4.8 Hardware (1) top

### 4.8.1 Hardware: Which of the following is part of the System Unit? top

Which of the following is part of the System Unit?

1. Monitor
2. CPU
3. CD-ROM
4. Floppy Disk
5. Printer

computer-knowledge hardware

Answer key

## 4.9 Hardware Software (1) top

### 4.9.1 Hardware Software: Which of the following is hardware and not software? top

Which of the following is hardware and not software?

1. Excel
2. Printer driver
3. Operating System
4. PowerPoint
5. Control Unit

computer-knowledge hardware-software

Answer key

## 4.10 Mailing (2) top

### 4.10.1 Mailing: The file that is linked with an e-mail and sent to the receiver of the e-mail is referred to as top

The file that is linked with an e-mail and sent to the receiver of the e-mail is referred to as

1. annexure
2. appendage
3. add-on
4. attachment
5. article

computer-knowledge mailing

Answer key

### 4.10.2 Mailing: Which of the following is not a term pertaining to Email? top

Which of the following is not a term pertaining to Email?

1. PowerPoint
2. Inbox
3. Sender
4. Receiver
5. None of these

computer-knowledge mailing

Answer key

## 4.11 Word Ability (2) top

### 4.11.1 Word Ability: option to insert a page break in WORD document top

To insert a page break link in a WORD document, the following option are used

1. Insert and Copy
2. Insert and Edit
3. Insert and Delete
4. Insert and Page Layout
5. Insert and Break

computer-knowledge word-ability

Answer key

### 4.11.2 Word Ability: selecting font in a word document top

In order to choose the font for a sentence in WORD document

1. Select Fond in the Format menu
2. Select Font in Edit menu
3. Select Font in Tools menu
4. Select Font in Insert menu
5. None of these

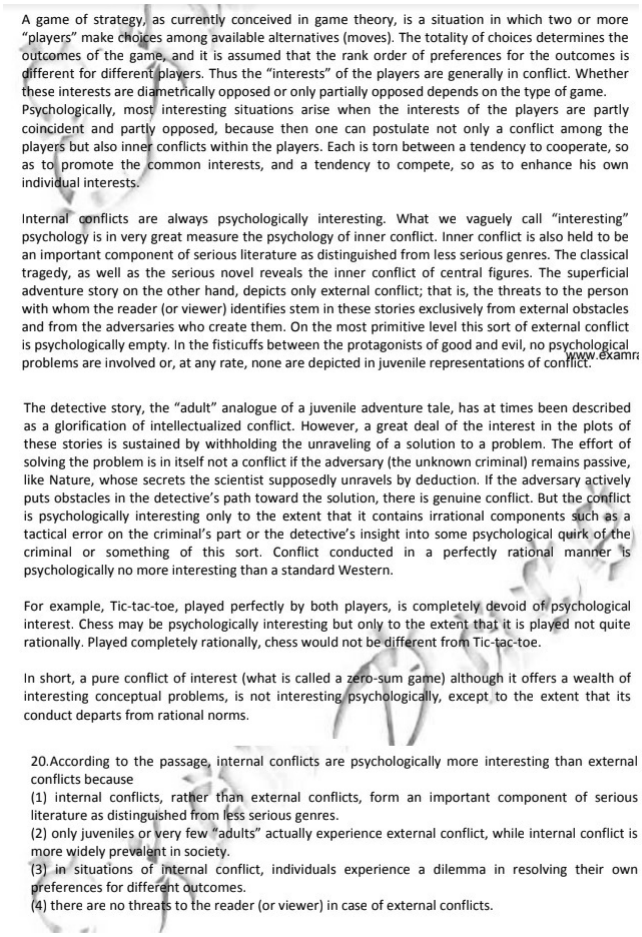
### 5.0.3 CAT 2015 | Question: 20 top



A game of strategy, as currently conceived in game theory, is a situation in which two or more "players" make choices among available alternatives (moves). The totality of choices determines the outcomes of the game, and it is assumed that the rank order of preferences for the outcomes is different for different players. Thus the "interests" of the players are generally in conflict. Whether these interests are diametrically opposed or only partially opposed depends on the type of game. Psychologically, most interesting situations arise when the interests of the players are partly coincident and partly opposed, because then one can postulate not only a conflict among the players but also inner conflicts within the players. Each is torn between a tendency to cooperate, so as to promote the common interests, and a tendency to compete, so as to enhance his own individual interests.

Internal conflicts are always psychologically interesting. What we vaguely call "interesting" psychology is in very great measure the psychology of inner conflict. Inner conflict is also held to be an important component of serious literature as distinguished from less serious genres. The classical tragedy, as well as the serious novel reveals the inner conflict of central figures. The superficial adventure story on the other hand, depicts only external conflict; that is, the threats to the person with whom the reader (or viewer) identifies stem in these stories exclusively from external obstacles and from the adversaries who create them. On the most primitive level this sort of external conflict is psychologically empty. In the fisticuffs between the protagonists of good and evil, no psychological problems are involved or, at any rate, none are depicted in juvenile representations of conflict.

www.examra

The detective story, the "adult" analogue of a juvenile adventure tale, has at times been described as a glorification of intellectualized conflict. However, a great deal of the interest in the plots of these stories is sustained by withholding the unraveling of a solution to a problem. The effort of solving the problem is in itself not a conflict if the adversary (the unknown criminal) remains passive, like Nature, whose secrets the scientist supposedly unravels by deduction. If the adversary actively puts obstacles in the detective's path toward the solution, there is genuine conflict. But the conflict is psychologically interesting only to the extent that it contains irrational components such as a tactical error on the criminal's part or the detective's insight into some psychological quirk of the criminal or something of this sort. Conflict conducted in a perfectly rational manner is psychologically no more interesting than a standard Western.

For example, Tic-tac-toe, played perfectly by both players, is completely devoid of psychological interest. Chess may be psychologically interesting but only to the extent that it is played not quite rationally. Played completely rationally, chess would not be different from Tic-tac-toe.

In short, a pure conflict of interest (what is called a zero-sum game) although it offers a wealth of interesting conceptual problems, is not interesting psychologically, except to the extent that its conduct departs from rational norms.

20.According to the passage, internal conflicts are psychologically more interesting than external conflicts because
(1) internal conflicts, rather than external conflicts, form an important component of serious literature as distinguished from less serious genres.
(2) only juveniles or very few "adults" actually experience external conflict, while internal conflict is more widely prevalent in society.
(3) in situations of internal conflict, individuals experience a dilemma in resolving their own preferences for different outcomes.
(4) there are no threats to the reader (or viewer) in case of external conflicts.

A game of strategy, as currently conceived in game theory, is a situation in which two or more "players " make choices among available alternatives (moves). The totality of choices determines the outcomes of the game, and it is assumed that the rank order of preferences for the outcomes is different for different players. Thus the "interests" of the players are generally in conflict. Whether these interests are diametrically opposed or only partially opposed depends on the type of game. Psychologically, most interesting situations arise when the interests of the players are partly coincident and partly opposed, because then one can postulate not only a conflict among the players but also inner conflicts within the players. Each is torn between a tendency to cooperate, so as to promote the common interests, and a tendency to compete, so as to enhance his own individual interests.

Internal conflict are always psychologically interesting. What we vaguely call "interesting" psychology is in very great measure the psychology of inner conflict. Inner conflict is also held to be an important component of serious literature as distinguished from less serious genres. The classical tragedy, as well as the serious novel reveals the inner conflict of central figures. The superficial adventure story on the other hand, depicts only external conflict; that is, the threats to the person with whom the reader (or viewer) identities stem in these stories exclusively from external obstacles and from the adversaries who create them. On the most primitive level this sort of external conflict is psychologically empty. In the fisticuffs between the protagonists of good and evils, no psychological problems are involved or, at any rate, none are depicted in juvenile representations of conflict.

The detective story, the " adult" analogue of a juvenile adventure tale, has at times been described as a glorification of intellectualized conflict. However, a great deal of the interest in the plots of these stories is sustained by withholding the unraveling of a solution to a problem. The effort of solving the problem is in itself not a conflict of the adversary (the unknown criminal) remains passive, like Nature, whose secrets the scientist supposedly unravel by deduction. If the adversary actively puts obstacles in the detective's path towards the solution, there is genuine conflict. But the conflict is psychologically interesting only to the extent that it contains irrational components such as a tactical error on the criminal's part or the detective's insight into some psychological quirk of the criminal or something of this sort. Conflict conducted in a perfectly rational manner is psychologically no more interesting than a standard Western.

For example, Tic-tac-toe, played perfectly by both players, is completely devoid of psychological interest. Chess may be psychologically interesting but only to the extent that it seems played not quite rationally. Played completely rationally chess would not be different from Tic-tac-toe.

In short, a pure conflict of interest (what is called a zero-sum game) although it offers a wealth of interesting conceptual problems, is not interesting psychologically, except to the extent that it's conduct departs from rational norms.

According to the passage, internal conflict are psychologically more interesting than external conflicts because

A. internal conflicts, rather than external conflicts, form an important component of serious literature as distinguished from less serious genres.
B. only juveniles or very few "adult" actually experience external conflict, while internal conflict more widely prevalent in society.
C. in situations of internal conflict, individuals experience a dilemma in resolving their own preferences for different outcomes.
D. there are no threats to the reader (no viewer) in case of external conflicts.

## 5.0.4 CAT 2015 | Question: 21 top

A game of strategy, as currently conceived in game theory, is a situation in which two or more "players" make choices among available alternatives (moves). The totality of choices determines the outcomes of the game, and it is assumed that the rank order of preferences for the outcomes is different for different players. Thus the "interests" of the players are generally in conflict. Whether these interests are diametrically opposed or only partially opposed depends on the type of game. Psychologically, most interesting situations arise when the interests of the players are partly coincident and partly opposed, because then one can postulate not only a conflict among the players but also inner conflicts within the players. Each is torn between a tendency to cooperate, so as to promote the common interests, and a tendency to compete, so as to enhance his own individual interests.

Internal conflicts are always psychologically interesting. What we vaguely call "interesting" psychology is in very great measure the psychology of inner conflict. Inner conflict is also held to be an important component of serious literature as distinguished from less serious genres. The classical tragedy, as well as the serious novel reveals the inner conflict of central figures. The superficial adventure story on the other hand, depicts only external conflict; that is, the threats to the person with whom the reader (or viewer) identifies stem in these stories exclusively from external obstacles and from the adversaries who create them. On the most primitive level this sort of external conflict is psychologically empty. In the fisticuffs between the protagonists of good and evil, no psychological problems are involved or, at any rate, none are depicted in juvenile representations of conflict.

www.examra

The detective story, the "adult" analogue of a juvenile adventure tale, has at times been described as a glorification of intellectualized conflict. However, a great deal of the interest in the plots of these stories is sustained by withholding the unraveling of a solution to a problem. The effort of solving the problem is in itself not a conflict if the adversary (the unknown criminal) remains passive, like Nature, whose secrets the scientist supposedly unravels by deduction. If the adversary actively puts obstacles in the detective's path toward the solution, there is genuine conflict. But the conflict is psychologically interesting only to the extent that it contains irrational components such as a tactical error on the criminal's part or the detective's insight into some psychological quirk of the criminal or something of this sort. Conflict conducted in a perfectly rational manner is psychologically no more interesting than a standard Western.

For example, Tic-tac-toe, played perfectly by both players, is completely devoid of psychological interest. Chess may be psychologically interesting but only to the extent that it is played not quite rationally. Played completely rationally, chess would not be different from Tic-tac-toe.

In short, a pure conflict of interest (what is called a zero-sum game) although it offers a wealth of interesting conceptual problems, is not interesting psychologically, except to the extent that its conduct departs from rational norms.

21. Which, according to the author, would qualify as interesting psychology?
(1) A statistician's dilemma over choosing the best method to solve an optimization problem.
(2) A chess player's predicament over adopting a defensive strategy against an aggressive opponent.
(3) A mountaineer's choice of the best path to Mt. Everest from the base camp.
(4) A finance manager's quandary over the best way of raising money from the market.

A game of strategy, as currently conceived in game theory, is a situation in which two or more "players " make choices among available alternatives (moves). The totally of choices determines the outcomes of the game, and it is assumed that the rank order of preferences for the outcomes is different for different players. Thus the "interests" of the players are generally in conflict. Whether these interests are diametrically opposed or only partially opposed depends on the type of game. Psychologically, most interesting situations arise when the interests of the players are partly coincident and partly opposed, because then one can postulate not only a conflict among the players but also inner conflicts within the players. Each is torn between a tendency to cooperate, so as to promote the common interests, and a tendency to compete, so as to enhance his own individual interests.

Internal conflict are always psychologically interesting. What we vaguely call "interesting" psychology is in very great measure the psychology of inner conflict. Inner conflict is also held to be an important component of serious literature as distinguished from less serious genres. The classical tragedy, as well as the serious novel reveals the inner conflict of central figures. The superficial adventure story on the other hand, depicts only external conflict; that is, the threats to the person with whom the reader (or viewer) identities stem in these stories exclusively from external obstacles and from the adversaries who create them. On the most primitive level this sort of external conflict is psychologically empty. In the fisticuffs between the protagonists of good and evils, no psychological problems are involved or, at any rate, none are depicted in juvenile representations of conflict.

The detective story, the " adult" analogue of a juvenile adventure tale, has at times been described as a glorification of intellectualized conflict. However, a great deal of the interest in the plots of these stories is sustained by withholding the unraveling of a solution to a problem. The effort of solving the problem is in itself not a conflict of the adversary (the unknown

criminal) remains passive, like Nature, whose secrets the scientist supposedly unravel by deduction. If the adversary actively puts obstacles in the detective's path towards the solution, there is genuine conflict. But the conflict is psychologically interesting only to the extent that it contains irrational components such as a tactical error on the criminal's part or the detective's insight into some psychological quirk of the criminal or something of this sort. Conflict conducted in a perfectly rational manner is psychologically no more interesting than a standard Western.

For example, Tic-tac-toe, played perfectly by both players, is completely devoid of psychological interest. Chess may be psychologically interesting but only to the extent that it seems played not quite rationally. Played completely rationally chess would not be different from Tic-tac-toe.

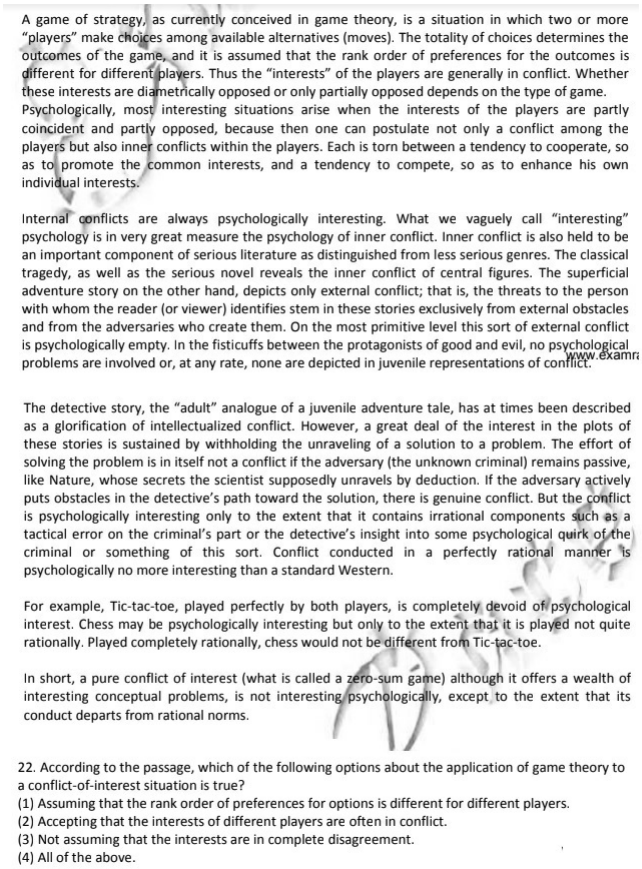
## 5.0.5 CAT 2015 | Question: 22 top



A game of strategy, as currently conceived in game theory, is a situation in which two or more "players" make choices among available alternatives (moves). The totality of choices determines the outcomes of the game, and it is assumed that the rank order of preferences for the outcomes is different for different players. Thus the "interests" of the players are generally in conflict. Whether these interests are diametrically opposed or only partially opposed depends on the type of game. Psychologically, most interesting situations arise when the interests of the players are partly coincident and partly opposed, because then one can postulate not only a conflict among the players but also inner conflicts within the players. Each is torn between a tendency to cooperate, so as to promote the common interests, and a tendency to compete, so as to enhance his own individual interests.

Internal conflicts are always psychologically interesting. What we vaguely call "interesting" psychology is in very great measure the psychology of inner conflict. Inner conflict is also held to be an important component of serious literature as distinguished from less serious genres. The classical tragedy, as well as the serious novel reveals the inner conflict of central figures. The superficial adventure story on the other hand, depicts only external conflict; that is, the threats to the person with whom the reader (or viewer) identifies stem in these stories exclusively from external obstacles and from the adversaries who create them. On the most primitive level this sort of external conflict is psychologically empty. In the fisticuffs between the protagonists of good and evil, no psychological problems are involved or, at any rate, none are depicted in juvenile representations of conflict.

The detective story, the "adult" analogue of a juvenile adventure tale, has at times been described as a glorification of intellectualized conflict. However, a great deal of the interest in the plots of these stories is sustained by withholding the unraveling of a solution to a problem. The effort of solving the problem is in itself not a conflict if the adversary (the unknown criminal) remains passive, like Nature, whose secrets the scientist supposedly unravels by deduction. If the adversary actively puts obstacles in the detective's path toward the solution, there is genuine conflict. But the conflict is psychologically interesting only to the extent that it contains irrational components such as a tactical error on the criminal's part or the detective's insight into some psychological quirk of the criminal or something of this sort. Conflict conducted in a perfectly rational manner is psychologically no more interesting than a standard Western.

For example, Tic-tac-toe, played perfectly by both players, is completely devoid of psychological interest. Chess may be psychologically interesting but only to the extent that it is played not quite rationally. Played completely rationally, chess would not be different from Tic-tac-toe.

In short, a pure conflict of interest (what is called a zero-sum game) although it offers a wealth of interesting conceptual problems, is not interesting psychologically, except to the extent that its conduct departs from rational norms.

22. According to the passage, which of the following options about the application of game theory to a conflict-of-interest situation is true?
(1) Assuming that the rank order of preferences for options is different for different players.
(2) Accepting that the interests of different players are often in conflict.
(3) Not assuming that the interests are in complete disagreement.
(4) All of the above.

A game of strategy, as currently conceived in game theory, is a situation in which two or more "players " make choices among available alternatives (moves). The totally of choices determines the outcomes of the game, and it is assumed that the rank order of preferences for the outcomes is different for different players. Thus the "interests" of the players are generally in conflict. Whether these interests are diametrically opposed or only partially opposed depends on the type of game. Psychologically, most interesting situations arise when the interests of the players are partly coincident and partly opposed, because then one can postulate not only a conflict among the players but also inner conflicts within the players. Each is torn between a tendency to cooperate, so as to promote the common interests, and a tendency to compete, so as to enhance his own individual interests.

Internal conflict are always psychologically interesting. What we vaguely call "interesting" psychology is in very great measure the psychology of inner conflict. Inner conflict is also held to be an important component of serious literature as distinguished from less serious genres. The classical tragedy, as well as the serious novel reveals the inner conflict of central figures. The superficial adventure story on the other hand, depicts only external conflict; that is, the threats to the person with

whom the reader (or viewer) identities stem in these stories exclusively from external obstacles and from the adversaries who create them. On the most primitive level this sort of external conflict is psychologically empty. In the fisticuffs between the protagonists of good and evils, no psychological problems are involved or, at any rate, none are depicted in juvenile representations of conflict.

The detective story, the " adult" analogue of a juvenile adventure tale, has at times been described as a glorification of intellectualized conflict. However, a great deal of the interest in the plots of these stories is sustained by withholding the unraveling of a solution to a problem. The effort of solving the problem is in itself not a conflict of the adversary (the unknown criminal) remains passive, like Nature, whose secrets the scientist supposedly unravel by deduction. If the adversary actively puts obstacles in the detective's path towards the solution, there is genuine conflict. But the conflict is psychologically interesting only to the extent that it contains irrational components such as a tactical error on the criminal's part or the detective's insight into some psychological quirk of the criminal or something of this sort. Conflict conducted in a perfectly rational manner is psychologically no more interesting than a standard Western.

For example, Tic-tac-toe, played perfectly by both players, is completely devoid of psychological interest. Chess may be psychologically interesting but only to the extent that it seems played not quite rationally. Played completely rationally chess would not be different from Tic-tac-toe.

In short, a pure conflict of interest (what is called a zero-sum game) although it offers a wealth of interesting conceptual problems, is not interesting psychologically, except to the extent that it's conduct departs from rational norms.

According to the passage, which of the following options about the application of game theory to a conflict-of-interest situation is true?

A. Assuming that the rank order of preferences for options is different for different players.
B. Accepting that the interests of different players are often in conflict.
C. Not assuming that the interests are in complete disagreement.
D. All of these above.

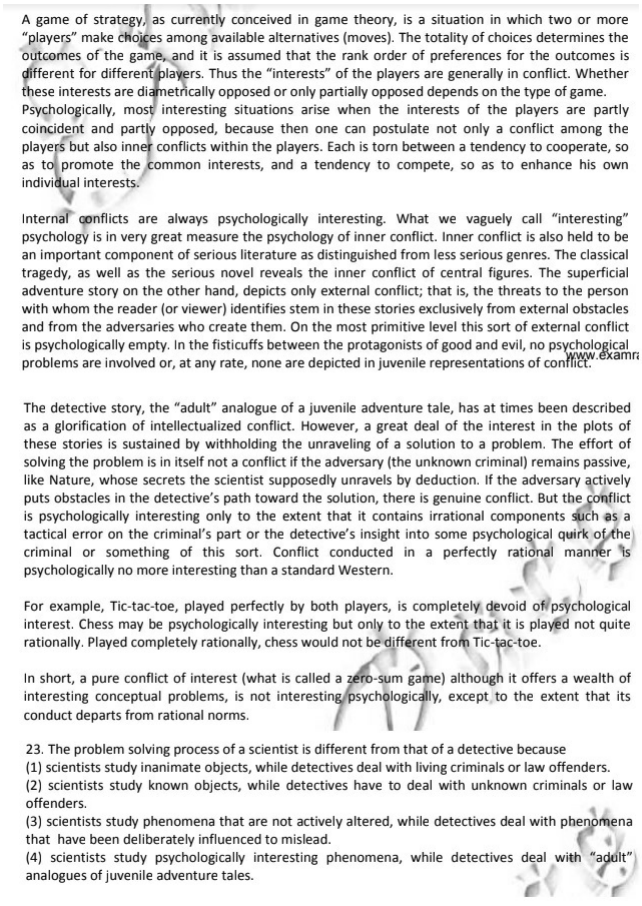
## 5.0.6 CAT 2015 | Question: 23 top



A game of strategy, as currently conceived in game theory, is a situation in which two or more "players" make choices among available alternatives (moves). The totality of choices determines the outcomes of the game, and it is assumed that the rank order of preferences for the outcomes is different for different players. Thus the "interests" of the players are generally in conflict. Whether these interests are diametrically opposed or only partially opposed depends on the type of game.
Psychologically, most interesting situations arise when the interests of the players are partly coincident and partly opposed, because then one can postulate not only a conflict among the players but also inner conflicts within the players. Each is torn between a tendency to cooperate, so as to promote the common interests, and a tendency to compete, so as to enhance his own individual interests.

Internal conflicts are always psychologically interesting. What we vaguely call "interesting" psychology is in very great measure the psychology of inner conflict. Inner conflict is also held to be an important component of serious literature as distinguished from less serious genres. The classical tragedy, as well as the serious novel reveals the inner conflict of central figures. The superficial adventure story on the other hand, depicts only external conflict; that is, the threats to the person with whom the reader (or viewer) identifies stem in these stories exclusively from external obstacles and from the adversaries who create them. On the most primitive level this sort of external conflict is psychologically empty. In the fisticuffs between the protagonists of good and evil, no psychological problems are involved or, at any rate, none are depicted in juvenile representations of conflict.

The detective story, the "adult" analogue of a juvenile adventure tale, has at times been described as a glorification of intellectualized conflict. However, a great deal of the interest in the plots of these stories is sustained by withholding the unraveling of a solution to a problem. The effort of solving the problem is in itself not a conflict if the adversary (the unknown criminal) remains passive, like Nature, whose secrets the scientist supposedly unravels by deduction. If the adversary actively puts obstacles in the detective's path toward the solution, there is genuine conflict. But the conflict is psychologically interesting only to the extent that it contains irrational components such as a tactical error on the criminal's part or the detective's insight into some psychological quirk of the criminal or something of this sort. Conflict conducted in a perfectly rational manner is psychologically no more interesting than a standard Western.

For example, Tic-tac-toe, played perfectly by both players, is completely devoid of psychological interest. Chess may be psychologically interesting but only to the extent that it is played not quite rationally. Played completely rationally, chess would not be different from Tic-tac-toe.

In short, a pure conflict of interest (what is called a zero-sum game) although it offers a wealth of interesting conceptual problems, is not interesting psychologically, except to the extent that its conduct departs from rational norms.

23. The problem solving process of a scientist is different from that of a detective because
(1) scientists study inanimate objects, while detectives deal with living criminals or law offenders.
(2) scientists study known objects, while detectives have to deal with unknown criminals or law offenders.
(3) scientists study phenomena that are not actively altered, while detectives deal with phenomena that have been deliberately influenced to mislead.
(4) scientists study psychologically interesting phenomena, while detectives deal with "adult" analogues of juvenile adventure tales.

A game of strategy, as currently conceived in game theory, is a situation in which two or more "players " make choices among available alternatives (moves). The totally of choices determines the outcomes of the game, and it is assumed that the rank

order of preferences for the outcomes is different for different players. Thus the "interests" of the players are generally in conflict. Whether these interests are diametrically opposed or only partially opposed depends on the type of game. Psychologically, most interesting situations arise when the interests of the players are partly coincident and partly opposed, because then one can postulate not only a conflict among the players but also inner conflicts within the players. ## 5.0.7 CAT 2015 | Question: 24 top

A game of strategy, as currently conceived in game theory, is a situation in which two or more "players" make choices among available alternatives (moves). The totality of choices determines the outcomes of the game, and it is assumed that the rank order of preferences for the outcomes is different for different players. Thus the "interests" of the players are generally in conflict. Whether these interests are diametrically opposed or only partially opposed depends on the type of game. Psychologically, most interesting situations arise when the interests of the players are partly coincident and partly opposed, because then one can postulate not only a conflict among the players but also inner conflicts within the players. Each is torn between a tendency to cooperate, so as to promote the common interests, and a tendency to compete, so as to enhance his own individual interests.

Internal conflicts are always psychologically interesting. What we vaguely call "interesting" psychology is in very great measure the psychology of inner conflict. Inner conflict is also held to be an important component of serious literature as distinguished from less serious genres. The classical tragedy, as well as the serious novel reveals the inner conflict of central figures. The superficial adventure story on the other hand, depicts only external conflict; that is, the threats to the person with whom the reader (or viewer) identifies stem in these stories exclusively from external obstacles and from the adversaries who create them. On the most primitive level this sort of external conflict is psychologically empty. In the fisticuffs between the protagonists of good and evil, no psychological problems are involved or, at any rate, none are depicted in juvenile representations of conflict.

The detective story, the "adult" analogue of a juvenile adventure tale, has at times been described as a glorification of intellectualized conflict. However, a great deal of the interest in the plots of these stories is sustained by withholding the unraveling of a solution to a problem. The effort of solving the problem is in itself not a conflict if the adversary (the unknown criminal) remains passive, like Nature, whose secrets the scientist supposedly unravels by deduction. If the adversary actively puts obstacles in the detective's path toward the solution, there is genuine conflict. But the conflict is psychologically interesting only to the extent that it contains irrational components such as a tactical error on the criminal's part or the detective's insight into some psychological quirk of the criminal or something of this sort. Conflict conducted in a perfectly rational manner is psychologically no more interesting than a standard Western.

For example, Tic-tac-toe, played perfectly by both players, is completely devoid of psychological interest. Chess may be psychologically interesting but only to the extent that it is played not quite rationally. Played completely rationally, chess would not be different from Tic-tac-toe.

In short, a pure conflict of interest (what is called a zero-sum game) although it offers a wealth of interesting conceptual problems, is not interesting psychologically, except to the extent that its conduct departs from rational norms.

24.How Tic-tac-toe as a game is different from Chess?
(1) Games like Tic-tac-toe is played in a perfectly rational manner is psychologically no more interesting than chess which is played not quite rationally.
(2) Both games are same when it comes to pure conflict of interest.
(3) Both games are played psychology of inner conflict
(4) Tic-tac-toe is a juvenile adventure tale, while chess at times been described as a glorification of intellectualized conflict.

A game of strategy, as currently conceived in game theory, is a situation in which two or more "players " make choices among available alternatives (moves). The totality of choices determines the outcomes of the game, and it is assumed that the rank order of preferences for the outcomes is different for different players. Thus the "interests" of the players are generally in conflict. Whether these interests are diametrically opposed or only partially opposed depends on the type of game. Psychologically, most interesting situations arise when the interests of the players are partly coincident and partly opposed, because then one can postulate not only a conflict among the players but also inner conflicts within the players. Each is torn between a tendency to cooperate, so as to promote the common interests, and a tendency to compete, so as to enhance his own individual interests.

Internal conflict are always psychologically interesting. What we vaguely call "interesting" psychology is in very great measure the psychology of inner conflict. Inner conflict is also held to be an important component of serious literature as distinguished from less serious genres. The classical tragedy, as well as the serious novel reveals the inner conflict of central figures. The superficial adventure story on the other hand, depicts only external conflict; that is, the threats to the person with whom the reader (or viewer) identities stem in these stories exclusively from external obstacles and from the adversaries who create them. On the most primitive level this sort of external conflict is psychologically empty. In the fisticuffs between the protagonists of good and evils, no psychological problems are involved or, at any rate, none are depicted in juvenile representations of conflict.

The detective story, the " adult" analogue of a juvenile adventure tale, has at times been described as a glorification of intellectualized conflict. However, a great deal of the interest in the plots of these stories is sustained by withholding the unraveling of a solution to a problem. The effort of solving the problem is in itself not a conflict of the adversary (the unknown criminal) remains passive, like Nature, whose secrets the scientist supposedly unravel by deduction. ## 5.0.15 A volunteer uses a truck to pick up donations of unsold food and clothing from stores. top

A volunteer uses a truck to pick up donations of unsold food and clothing from stores and to deliver them to locations where they can be distributed. He drives only along a certain networks of roads.

In the network there are two-way roads connecting each of the following pairs of points. 1 with 2, 1 with 3, 1 with 5, 2 with 6, 3 with 7, 5 with 6, and 6 with 7. There are also one way roads going from 2 to 4, from 3 to 2, and from 4 to 3. There are no other roads in the network, and the roads in the network do not intersect.

To make a trip involving pickups and deliveries, the volunteer always takes a route that for the whole trip passes through the fewest of the points 1 through 7, counting a point twice if the volunteer passes through it twice.

The volunteer 's home is at point 3. Donations can be picked up at supermarket at point 1, a clothing store at point 5, and a bakery at point 4. Deliveries can be made as needed to a tutoring center at point 2, a distribution center at point 6, and a shelter at point 7.

1 ) If the volunteer starts at the supermarket and next is to go to the shelter, the first intermediate point his route passes through must be.

1. 2
2. 3
3. 5
4. 6
5. 7

2 ) If starting from home, the volunteer next is to make pickups for the shelter at the supermarket and the bakery (in either order), the first two intermediate points on his route, beginning with the first must be..

1. 1 and 2
2. 1 and 3
3. 2 and 1
4. 2 and 4
5. 4 and 2

3 ) If starting from the clothing store, the volunteer next is to pickup bread at either the supermarket or the bakery ( whichever stop makes his route go through the fewest of the points ) and then is to go to the shelter, the first two points he reaches after the clothing store, beginning with the first, must be.

1. 1 and 2
2. 1 and 3
3. 4 and 2
4. 6 and 2
5. 6 and 4

4 ) If the volunteer is to make a trip starting at the shelter, next going to the bakery for a pickup, and then ending at the distribution center, the first two intermediate points on his route beginning with the first can be.

1. 3 and 1
2. 3 and 4
3. 4 and 2
4. 6 and 2
5. 6 and 5.

## Kovacs. top

A government is assigning each of six embassy office workers - Farr, Golden, HayaKawa, Inserra, Jones, and Kovacs to embassies. There are four embassies. Embassies L and M are located in countries with dry climates, whereas embassies P and T are located in countries with humid climates.The office workers must be assigned according to the following rules :

Each embassy must have at least one of the workers assigned to it.

At least one embassy in a humid climate must have at least two workers assigned to it.

Golden cannot be assigned to the same embassy as Kovacs.

Inserra must be assigned to an embassy in a dry climate.

Jones must be assigned to an embassy in a humid climate.

1 ) Which of the following is an acceptable assignment of the workers to the embassies?

| L | M | P | T |
|---|---|---|---|
| Farr, Golden | Inserra, Kovacs | HayaKawa | Jones |
| Golden, Kovacs | Inserra | Jones | Farr, HayaKawa |
| Golden | Farr, Inserra | Kovacs | Jones, HayaKawa |
| Jones | Golden, Inserra | HayaKawa | Farr, Kovacs |
| Kovacs | Farr, HayaKawa | Inserra | Golden, Jones |

2 ) Which of the following must be assigned either to embassy L or to embassy M ?

1. Farr
2. Golden
3. HayaKawa
4. Inserra
5. Kovacs

3 ) Which of the following CANNOT be true ?

1. One worker is assigned to L.
2. Two worker are assigned to P.
3. Two workers are assigned to L.
4. Three workers are assigned to M.
5. Three workers are assigned to T.

4 ) If Golden and Kovacs, are assigned to L and M, respectively which of the following must be true?

1. Farr is assigned to either P or T.
2. Inserra is assigned to either P or T.
3. P and T each have two workers assigned to them.
4. HayaKawa is assigned to L.
5. HayaKawa is assigned to T.

5 ) If Golden, HayaKawa, and Kovacs are among the workers assigned to embassies in humid climates, which of the following must be true ?

1. Farr is assigned to an embassy to which none of the other five office workers is assigned.
2. Golden is assigned to an embassy to which none of the other five office workers is assigned.
3. Jones is assigned to the same embassy as Kovacs.
4. HayaKawa is assigned to the same embassy as Golden.
5. HayaKawa is assigned to the same embassy as Kovacs.

## 5.0.17 A world wide ban on the production of certain ozone- destroying chemicals would provide only an illusion of protection. top

A world wide ban on the production of certain ozone destroying chemicals would provide only an illusion of protection. Quantities of such chemicals, already produced, exist as coolants in millions of refrigerators. When they reach the ozone layer in the atmosphere, there action can not be halted. So there is no way to prevent these chemicals from damaging the ozone layer further.

Which of the following, if true, most seriously weakens the argument above?

1. It is impossible to measure with accuracy the quantity of ozone-destroying chemicals that exist as coolants in refrigerators.
2. In modern societies, refrigeration of food is necessary to prevent unhealthy and potentially life-threatening conditions.
3. Replacement chemicals that will not destroy ozone have not yet been developed and would be more expensive than the chemicals now used as coolants in refrigerators.
4. Even if people should give up the use of refrigeration, the coolants already in existing refrigerators are a threat to atmospheric ozone.
5. The coolants in refrigerators can be fully recovered at the end of the useful life of the refrigerators and reused.

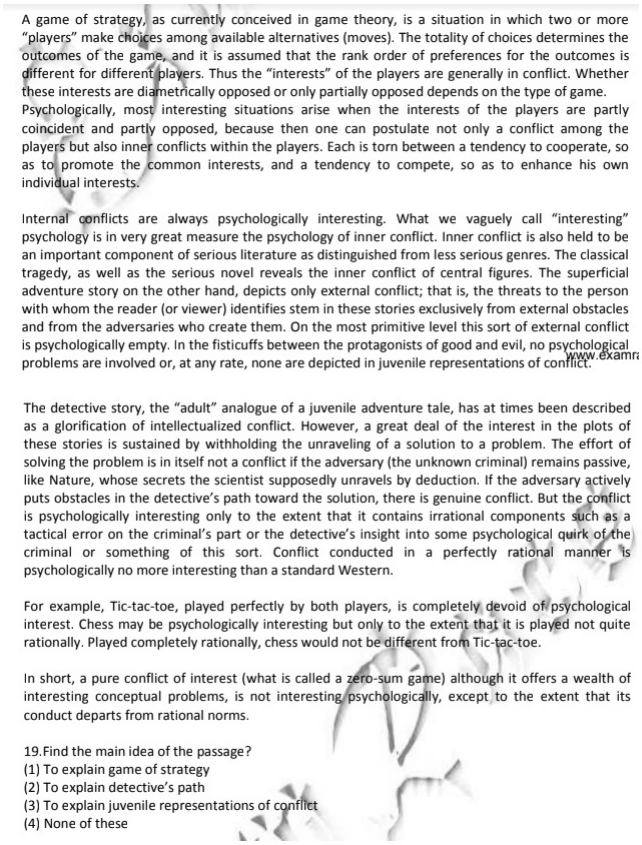
### 5.0.21 CAT 2015 | Question: 19 top



A game of strategy, as currently conceived in game theory, is a situation in which two or more "players" make choices among available alternatives (moves). The totality of choices determines the outcomes of the game, and it is assumed that the rank order of preferences for the outcomes is different for different players. Thus the "interests" of the players are generally in conflict. Whether these interests are diametrically opposed or only partially opposed depends on the type of game. Psychologically, most interesting situations arise when the interests of the players are partly coincident and partly opposed, because then one can postulate not only a conflict among the players but also inner conflicts within the players. Each is torn between a tendency to cooperate, so as to promote the common interests, and a tendency to compete, so as to enhance his own individual interests.

Internal conflicts are always psychologically interesting. What we vaguely call "interesting" psychology is in very great measure the psychology of inner conflict. Inner conflict is also held to be an important component of serious literature as distinguished from less serious genres. The classical tragedy, as well as the serious novel reveals the inner conflict of central figures. The superficial adventure story on the other hand, depicts only external conflict; that is, the threats to the person with whom the reader (or viewer) identifies stem in these stories exclusively from external obstacles and from the adversaries who create them. On the most primitive level this sort of external conflict is psychologically empty. In the fisticuffs between the protagonists of good and evil, no psychological problems are involved or, at any rate, none are depicted in juvenile representations of conflict.

The detective story, the "adult" analogue of a juvenile adventure tale, has at times been described as a glorification of intellectualized conflict. However, a great deal of the interest in the plots of these stories is sustained by withholding the unraveling of a solution to a problem. The effort of solving the problem is in itself not a conflict if the adversary (the unknown criminal) remains passive, like Nature, whose secrets the scientist supposedly unravels by deduction. If the adversary actively puts obstacles in the detective's path toward the solution, there is genuine conflict. But the conflict is psychologically interesting only to the extent that it contains irrational components such as a tactical error on the criminal's part or the detective's insight into some psychological quirk of the criminal or something of this sort. Conflict conducted in a perfectly rational manner is psychologically no more interesting than a standard Western.

For example, Tic-tac-toe, played perfectly by both players, is completely devoid of psychological interest. Chess may be psychologically interesting but only to the extent that it is played not quite rationally. Played completely rationally, chess would not be different from Tic-tac-toe.

In short, a pure conflict of interest (what is called a zero-sum game) although it offers a wealth of interesting conceptual problems, is not interesting psychologically, except to the extent that its conduct departs from rational norms.

19.Find the main idea of the passage?
(1) To explain game of strategy
(2) To explain detective's path
(3) To explain juvenile representations of conflict
(4) None of these

A game of strategy, as currently conceived in game theory, is a situation in which two or more "players " make choices among available alternatives (moves). The totality of choices determines the outcomes of the game, and it is assumed that the rank order of preferences for the outcomes is different for different players. Thus the "interests" of the players are generally in conflict. Whether these interests are diametrically opposed or only partially opposed depends on the type of game. Psychologically, most interesting situations arise when the interests of the players are partly coincident and partly opposed, because then one can postulate not only a conflict among the players but also inner conflicts within the players. Each is torn between a tendency to cooperate, so as to promote the common interests, and a tendency to compete, so as to enhance his own individual interests.

Internal conflicts are always psychologically interesting. What we vaguely call "interesting" psychology is in very great measure the psychology of inner conflict. Inner conflict is also held to be an important component of serious literature as distinguished from less serious genres. The classical tragedy, as well as the serious novel reveals the inner conflict of central figures. The superficial adventure story on the other hand, depicts only external conflict; that is, the threats to the person with whom the reader (or viewer) identifies stem in these stories exclusively from external obstacles and from the adversaries who create them. On the most primitive level this sort of external conflict is psychologically empty. In the fisticuffs between the protagonists of good and evil, no psychological problems are involved or, at any rate, none are depicted in juvenile representations of conflict.

The detective story, the " adult" analogue of a juvenile adventure tale, has at times been described as a glorification of intellectualized conflict. However, a great deal of the interest in the plots of these stories is sustained by withholding the unraveling of a solution to a problem. The effort of solving the problem is in itself not a conflict if the adversary (the unknown criminal) remains passive, like Nature, whose secrets the scientist supposedly unravels by deduction. If the adversary actively puts obstacles in the detective's path toward the solution, there is genuine conflict. But the conflict is psychologically interesting only to the extent that it contains irrational components such as a tactical error on the criminal's part or the detective's insight into some psychological quirk of the criminal or something of this sort. Conflict conducted in a perfectly rational manner is psychologically no more interesting than a standard Western.

For example, Tic-tac-toe, played perfectly by both players, is completely devoid of psychological interest. Chess may be psychologically interesting but only to the extent that it is played not quite rationally. Played completely rationally, chess would not be different from Tic-tac-toe.

In short, a pure conflict of interest (what is called a zero-sum game) although it offers a wealth of interesting conceptual problems, is not interesting psychologically, except to the extent that its conduct departs from rational norms.

Find the main idea of the passage?

A. To explain game of strategy
B. To explain detective's path
C. To explain juvenile representations of conflict
D. None of these

cat1995 english-language passage-reading

### 5.2.9 English Language: CAT 1995 | Question: 50 top

The questions are based on a short statement preceding them.

Now the audience is a very curious animal. It is shrewd rather than intelligent. Its mental capacity is less than that of its most intellectual members. If these were graded from A to Z, decreasing with succeeding letters to the zero of the hysterical shop girl, I should say its mental capacity would come around about the letter 0. According to the above statements,

A. Some members in the audience are more intelligent than any of its other members.
B. The net intelligence of the audience is a little less than average.
C. a only.
D. a and b both.

cat1995 english-language passage-reading

### 5.2.10 English Language: CAT 1996 | Question: 100 top

NOBODY disputes that wage inequality is on the rise in most rich countries, and especially in America. Exactly how much inequality has gone up remains a matter of dispute, but the trend is clear. And it is not just a matter of incomes soaring at the very top and/or plunging (relatively speaking) at the very bottom: the distribution of incomes is being stretched throughout its span. Why?

A plausible one-word answer, von might think, is "computers". Information technology replaces the unskilled; less demand means lower wages: At the same time computers complement the skills of more sophisticated types — the "knowledge workers" who represent, according to pundits such as Robert Reich, the future of work. This complementarily raises individuals' productivity and thereby increases their earning power. The prosperous get more so, the unskilled get dumped.

Superficially appealing, the knowledge-worker part of this story has always seemed, on reflection, half-baked. Its advocates concentrate on the wagedispersing role of PCs. But the trend of rising inequality dates back much further than the 1980s, when the PC caught on. Also, research (as well as casual observation) shows that office PCs are chiefly used for word processing and cranking out spreadsheets. It is hard to believe that top managers' wages are rising relative to the mean because bosses are doing their own typing. And the typical spreadsheet cruncher is not a corporate top-dog but a middle-level clerk or accountant whose wage is failing to keep pace with his boss's.

Statistics do show that wages are correlated with use of PCs. But the question is whether PCs have raised workers' wages or were merely put on the desks of workers who were well-paid to begin with. Among evidence for the latter view is one study that showed pay to be as strongly correlated with the use of pencils as with the use of PCs. As yet, nobody has argued that pencils have shifted the income distribution.

A new study by Timothy Bresnahan of Stanford University reflects on these and other findings and offers a quite different view. Yes, the paper argues, IT has had, and will continue to have, profound effects on jobs and wages—but not through the largely bogus knowledge-worker channel.

Rather than emphasising PCs as a way to improve the productivity of individual workers, Mr Bresnahan sees computing as an agent of revolution in whole organisations. Beginning not with PCs but much earlier, computers have indeed been used as substitutes for low-skill clerical workers. The pattern began in the 1950s, when hugely expensive mainframe computers were first used to save correspondingly huge sums in information-intensive functions in the financialservices industry, then in accounting, payroll and inventory- control tasks in other big organisations.

It is unsurprising that this kind of innovation, which spread in scale and scope as the cost of computing came down, should have lowered the wages of the unskilled. But how did it raise the wages of people higher up the income range? Mr Bresnahan's answer is that it raised the demand for two kinds of worker—neither of them knowledge workers in the Reichian sense.

First, as back-office jobs (susceptible to automation) have declined in importance, front-office jobs (which require certain bundles of skills, especially social skills) have increased. In other words, there is less mindless paper-shuffling and more dealing with customers, suppliers and other humans. Second,- such far-reaching organisational innovation puts exceptional demands on managers—not as power-users of Windows, heaven forbid, but as leaders of men. The phase of mere automation is difficult to manage in its own right; beyond that lies the even more important phase of identifying and pursuing the new business opportunities that the technology has brought within reach. Front-office workers with "people skills" and good managers (in the old-fashioned sense of that term) are the main winners from the IT revolution.

This story might seem more persuasive as an account of the early stages of the IT revolution than of what is happening now. Mr. Bresnahan argues, on the contrary, that this pattern of innovation is going to persist. PCs, as such, he regards as an unimportant technology so far as the labour market is concerned. However, networks of PCs are another thing: the advance of networked-computer systems in business has already led, he argues, to a new surge of organisational innovation. Inter-organisational networking, involving the automation of company bureaucracies devoted to buying and selling, could in future be as fruitful as the earlier phases of large-scale business automation: as he points out, "the amount of mid-skill white-collar work in buying and selling is stunning."

The only drawback of this emphasis on the organisational as opposed to individual-worker complementarily of IT is that it makes it harder to say exactly which skills the economy is going to need. Indeed, if Mr. Bresnahan is right, economists' standard ways of categorising workers according to skill are wrong: there is more (or less) to it than education and training, narrowly defined. Thanks to computers, oddly enough, the ability to get on well with other people is going to be even more valuable in future than it has been up to now. Possible slogan for far-sighted governments: courtesy, our strategic economic resource.

Which skills are going to be greatly in demand in the future?

A. the ability to get on well with other people
B. the ability to work with computers
C. the ability to manage and to lead
D. all of the above

cat1996 english-language passage-reading

## 5.2.11 English Language: CAT 1996 | Question: 51 top

Read the passages and answer the questions based on them.

Emile Durkheim, the first person to be formally recognised as a sociologist and the most scientific of the pioneers, conducted a study that stands as a research model for sociologists today. His investigation of suicide was, in fact, the first sociological study to use statistics. In Suicide (1964, originally published in 1897) Durkheim documented his contention that some aspects of human behaviour — even something as allegedly individualistic as suicide — can be explained without reference to individuals.

Like all of Durkheim's work, suicide must he viewed within the context of his concern for social integration. Durkheim wanted to see if suicide rates within a social entity (for example, a group, organisation, or society) are related to the degree to which individuals are socially involved (integrated and regulated). Durkheim described three types of suicide: egoistic, anomic, and altruistic. Egoistic suicide is promoted when individuals do not have sufficient social ties. Since single (never married) adults, for example, are no.r heavily involved with family life, they are more likely to commit suicide. On the other hand, altruistic suicide is more likely to occur when social integration is too strong. The ritual suicide of Hindu widows on their husbands' funeral pyres is one example. Military personnel, trained to lay down their lives for their country, provide another illustration.

Durkheim's third type of suicide — anomic suicide — increases when the social regulation of individuals is disrupted. For example, sukide rates increase during economic depression. People who suddenly find themselves without a job or without hope of finding one are more prone to kill themselves. Suicide may also increase during periods of prosperity. People may loosen their social ties by taking new jobs, moving to new communities, or finding new mates.

Using data from the government population reports of several countries (much of it from the French Government Statistical Officer), Durkheim found strong support for his line of reasoning. Suicide rates were higher among single than married people, among military personnel than civilians, among divorced than married people, and among people involved in nation-wide economic crises.

It is important to realise that Durkheim's primary interest was not in the empirical (observable) indicators he used such as suicide rates among military personnel, married people, and so forth. Rather, Durkheim used the following indicators to support several of his contentions: (1) Social behaviour can be explained by social rather than psychological factors; (2)

Suicide is affected by the degree of integration and regulation within social entities; and (3) Since society can be studied scientifically, sociology is worthy of recognition in the academic world. Durkheim was successful on all three counts.

In his study of suicide Durkheim's main purpose was

A. to document that suicide can be explained without reference to the individual.
B. to provide an explanation of the variation in the rate of suicide across societies.
C. to categorise various types of suicide.
D. to document that social behaviour can be explained by social rather than psychological factors.

Durkheim was successful on all three counts.

Basing himself on his own indicators, Durkheim was

A. Right on some counts not others
B. Vindicated on all counts
C. Wrong but did not realise that he was right
D. Substantially correct but formally wrong

cat1996 passage-reading english-language

### 5.2.20 English Language: CAT 1996 | Question: 60 top

Among the considerable number of men dedicated to the task of keeping Louis XIV entertained, several met bizarre ends. In 1671 at Chantilly, the great chef Vatel, after providing the king and some 2, 000 courtiers with three superb meals on the first day of their visit, killed himself on the next, when a consignment of fish he had ordered failed to appear (it turned up shortly thereafter) Jean-Bapriste Lully, in charge of music for all the royal festivities, managed to stab himself in the foot with his conductor's baton while directing a performance of one of his own works in 1687; he died soon afterwards when gangrene set in.

Nothing, however, quite equals the death of Jean-Baptiste Poquelin, the self-styled sieure de Moliere, a man established by 1672 as actor/manager and chief play-wright of la troupe du ropi, performing at the Palais Royal in Paris and much in demand at court. "But might it not be a bit dangerous to counterfeit death?" Moliere, as Argan, the hypochondriac protagonist of his last comedy, "Le Malade imaginaire", enquired, when about to do just that, during the play's fourth performance on February 17th,1673. "No, no," the maid Toinette reassured him, "what danger could there be?" But Moliere did, in fact, die: not actually on stage though he finished Argan's part with considerable difficulty — but an hour or two later at home. Predictably, a strictly Catholic France where actors were excommunicated and refused burial in consecrated ground (though churchmen patronised

the theatre and wrote plays themselves) the usual dour moral lessons were drawn.

The stage chair in which Moliere as Argan was stricken in earnest, not in jest, can still be seen on permanent display in the upper lobby of the Comedie Francaise —the theatre which, in effect, he founded. It is, apart from the plays themselves and their prefaces, almost the only tangible relic of a man much written about by friends and enemies during and immediately after his lifetime, who nevertheless remains in many ways mysterious, despite endlessly proliferating scholarly and critical research. Virginia Scott, author of the latest attempt at a biography, is well aware of the difficulties. No one can disentangle legend from fact, fiction from truth — not even in the brief life attached to the collected edition of Moliere's works produced by his associate La Grange in 1682, or in the 1705 biography by Grimmarest. Moliere himself left no letters, no diaries, no memoirs. None of the various houses in which he is said to have lived remains, nor do any of his personal possessions. Not only do his contemporaries provide ambiguous and conflicting reports, but the basic facts are wanting. Shakespeareans may complain about a certain paucity of information, but at least they know where their man was buried and whom he married. Molieristes do not.

Ms Scott is engagingly candid about her biographical method. "My agenda is to express those intersections between myself and the past that I experience imaginatively... I order what I know or believe I know so as to create characters — whom I choose to call Moliere and Madeleine — who could have made with some degree of probability the choices I believe the real Moliere and Madeleine to have made." So she is free to decide that Armande Bejart, the teenager Moliere married in 1662, was indeed the daughter of his former mistress Madeleine Bejart by the Comte de Modene, rather than her youngest sister. (But not, as some of his enemies suggested, also Moliere's own daughter.) As to where and when the respectable Jean-Baptiste Poquehin first met the distinctly bohemian Madeleine, and how he was drawn away from the solid family upholstery business into the theatre, she does not pretend to offer more than speculation. Like everyone who writes about Moliere, Ms Scott combs the plays themselves for clues about his private life and comes up with suggestions that may or may not be right. Most innovative of all, perhaps, is her hypothesis that Moliere's relationship with his young protégé Baron was homoerotic — though even that was hinted at by the more malicious of his contemporaries.

The last biography of Moliere published in English, John Palmer's "Moliere" (1930; reprinted in 1970), is still worth reading. To compare it, however, with Ms Scott's is to realise how enormously attitudes have changed during the intervening years. Nervous even about Moliere's illicit relationship with Madeleine, Palmer could not bring himself to say more than that "probably" they had an affair. Over Baron's possibly sexual appeal to Moliere he maintained total silence. Also very much of its period was his slight regard for that improvised Italian theatre which provided Moliere with many dramatic types, and his contempt for lavish baroque spectacle of the kind that Louis XIV loved and on which Moliere "wasted" his talents. The ballet de cour and comedies-ballets are now regarded with far more interest and respect than was the case in 1930 (as indeed are the court masques that Ben Jonson and Inigo Jones created for James 1). Both the delicious "Le Bourgeois Gentilhomme" and "Le Malade Imaginaire" are, after all, comedies-ballets — a category that a more flexible 21 "..century idea of theatre can once again accommodate.

Ms Scott provides valuable correctives here. The strength of her book (as might be expected from the author of "The Commedia dell' Arte in Paris", 1990) lies less in its portrait of Moliere himself than in the densely researched and persuasive background against which she is able to situate him. This is made up of families and places (she is particularly good on the 13 years during which Moliere and his troupe wandered the French provinces before returning to Paris), while also including portraits of his enemies, as well as eminent friends such as Boileau, La Fontaine and Racine. She does not offer much in the way of commentary on the plays themselves. What she does do is arrestingly illuminate the complex world of theatre and court, both in Paris and elsewhere, that finally constitutes almost all that can really be known of Moliere's life.

It can be inferred from the passage that Moliere was:

1. a play wright
2. an actor
3. a novelist
4. a poet

A. 1, 2 and 3 B. 2, 3 and 4 C. 1 and 2 D. 2 and 3

No one can disentangle legend from fact, fiction from truth — not even in the brief life attached to the collected edition of Moliere’s works produced by his associate La Grange in 1682, or in the 1705 biography by Grimmarest. Moliere himself left no letters, no diaries, no memoirs. None of the various houses in which he is said to have lived remains, nor do any of his personal possessions. Not only do his contemporaries provide ambiguous and conflicting reports, but the basic facts are wanting. Shakespeareans may complain about a certain paucity of information, but at least they know where their man was buried and whom he married. Molieristes do not.

Ms Scott is engagingly candid about her biographical method. “My agenda is to express those intersections between myself and the past that I experience imaginatively... I order what I know or believe I know so as to create characters — whom I choose to call Moliere and Madeleine — who could have made with some degree of probability the choices I believe the real Moliere and Madeleine to have made.” So she is free to decide that Armande Bejart, the teenager Moliere married in 1662, was indeed the daughter of his former mistress Madeleine Bejart by the Comte de Modene, rather than her youngest sister. (But not, as some of his enemies suggested, also Moliere’s own daughter.) As to where and when the respectable Jean-Baptiste Poquehin first met the distinctly bohemian Madeleine, and how he was drawn away from the solid family upholstery business into the theatre, she does not pretend to offer more than speculation. Like everyone who writes about Moliere, Ms Scott combs the plays themselves for clues about his private life and comes up with suggestions that may or may not be right. Most innovative of all, perhaps, is her hypothesis that Moliere’s relationship with his young protégé Baron was homoerotic — though even that was hinted at by the more malicious of his contemporaries.

The last biography of Moliere published in English, John Palmer’s “Moliere” (1930; reprinted in 1970), is still worth reading. To compare it, however, with Ms Scott’s is to realise how enormously attitudes have changed during the intervening years. Nervous even about Moliere’s illicit relationship with Madeleine, Palmer could not bring himself to say more than that “probably” they had an affair. Over Baron’s possibly sexual appeal to Moliere he maintained total silence. Also very much of its period was his slight regard for that improvised Italian theatre which provided Moliere with many dramatic types, and his contempt for lavish baroque spectacle of the kind that Louis XIV loved and on which Moliere “wasted” his talents. The ballet de cour and comedies-ballets are now regarded with far more interest and respect than was the case in 1930 (as indeed are the court masques that Ben Jonson and Inigo Jones created for James 1). Both the delicious “Le Bourgeois Gentilhomme” and “Le Malade Imaginaire” are, after all, comedies-ballets — a category that a more flexible 21 “..century idea of theatre can once again accommodate.

Ms Scott provides valuable correctives here. The strength of her book (as might be expected from the author of “The Commedia dell’ Arte in Paris”, 1990) lies less in its portrait of Moliere himself than in the densely researched and persuasive background against which she is able to situate him. This is made up of families and places (she is particularly good on the 13 years during which Moliere and his troupe wandered the French provinces before returning to Paris), while also including portraits of his enemies, as well as eminent friends such as Boileau, La Fontaine and Racine. She does not offer much in the way of commentary on the plays themselves. What she does do is arrestingly illuminate the complex world of theatre and court, both in Paris and elsewhere, that finally constitutes almost all that can really be known of Moliere’s life.

What is the main difficulty in knowing about the life of Moliere according to the author?

A. there is no tangible relic of the man
B. it is difficult to disentangle legend from fact in what is known about Moliere’s life
C. there are conflicting reports by his contemporaries, and even the basic facts are wanting
D. all of these

## 5.2.22 English Language: CAT 1996 | Question: 62 top

Among the considerable number of men dedicated to the task of keeping Louis XIV entertained, several met bizarre ends. In 1671 at Chantilly, the great chef Vatel, after providing the king and some 2, 000 courtiers with three superb meals on the first day of their visit, killed himself on the next, when a consignment of fish he had ordered failed to appear (it turned up shortly thereafter) Jean-Bapriste Lully, in charge of music for all the royal festivities, managed to stab himself in the foot with his conductor’s baton while directing a performance of one of his own works in 1687; he died soon afterwards when gangrene set in.

Nothing, however, quite equals the death of Jean-Baptiste Poquelin, the self-styled sieure de Moliere, a man established by

1672 as actor/manager and chief play-wright of la troupe du ropi, performing at the Palais Royal in Paris and much in demand at court. “But might it not be a bit dangerous to counterfeit death?” Moliere, as Argan, the hypochondriac protagonist of his last comedy, “Le Malade imaginaire”, enquired, when about to do just that, during the play’s fourth performance on February 17th,1673. “No, no,” the maid Toinette reassured him, “what danger could there be?” But Moliere did, in fact, die: not actually on stage though he finished Argan’s part with considerable difficulty — but an hour or two later at home. Predictably, a strictly Catholic France where actors were excommunicated and refused burial in consecrated ground (though churchmen patronised the theatre and wrote plays themselves) the usual dour moral lessons were drawn.

The stage chair in which Moliere as Argan was stricken in earnest, not in jest, can still be seen on permanent display in the upper lobby of the Comedie Francaise —the theatre which, in effect, he founded. It is, apart from the plays themselves and their prefaces, almost the only tangible relic of a man much written about by friends and enemies during and immediately after his lifetime, who nevertheless remains in many ways mysterious, despite endlessly proliferating scholarly and critical research. Virginia Scott, author of the latest attempt at a biography, is well aware of the difficulties. No one can disentangle legend from fact, fiction from truth — not even in the brief life attached to the collected edition of Moliere’s works produced by his associate La Grange in 1682, or in the 1705 biography by Grimmarest. Moliere himself left no letters, no diaries, no memoirs. None of the various houses in which he is said to have lived remains, nor do any of his personal possessions. Not only do his contemporaries provide ambiguous and conflicting reports, but the basic facts are wanting. Shakespeareans may complain about a certain paucity of information, but at least they know where their man was buried and whom he married. Molieristes do not.

Ms Scott is engagingly candid about her biographical method. “My agenda is to express those intersections between myself and the past that I experience imaginatively... I order what I know or believe I know so as to create characters — whom I choose to call Moliere and Madeleine — who could have made with some degree of probability the choices I believe the real Moliere and Madeleine to have made.” So she is free to decide that Armande Bejart, the teenager Moliere married in 1662, was indeed the daughter of his former mistress Madeleine Bejart by the Comte de Modene, rather than her youngest sister. (But not, as some of his enemies suggested, also Moliere’s own daughter.) Both the delicious "Le Bourgeois Gentilhomme" and "Le Malade Imaginaire" are, after all, comedies-ballets — a category that a more flexible 21 "..century idea of theatre can once again accommodate.

Ms Scott provides valuable correctives here. The strength of her book (as might be expected from the author of "The Commedia dell' Arte in Paris", 1990) lies less in its portrait of Moliere himself than in the densely researched and persuasive background against which she is able to situate him. This is made up of families and places (she is particularly good on the 13 years during which Moliere and his troupe wandered the French provinces before returning to Paris), while also including portraits of his enemies, as well as eminent friends such as Boileau, La Fontaine and Racine. She does not offer much in the way of commentary on the plays themselves. What she does do is arrestingly illuminate the complex world of theatre and court, both in Paris and elsewhere, that finally constitutes almost all that can really be known of Moliere's life.

Suggest a suitable title for the passage:

A. Mysterious Moliere
B. Recreating Moliere
C. A Spectacular Death
D. Moliere and Madeleine

## 5.2.27 English Language: CAT 1996 | Question: 67 top

That the doctrines connected with the name of Darwin are altering our principles has become a sort of commonplace thing to

say. And moral principles are said to share in this general transformation. Now, to pass by other subjects I do not see why Darwinism need change our ultimate moral ideas. It will not modify our conception of the end, either for the community or the individual, unless we have been holding views which long before Darwin were out of date. As to the principles of ethics I perceive, in short, no sign of revolution. Darwinism has indeed helped many to truer conception of the end, but I cannot admit that it has either originated or modified that conception.

And yet in ethics Darwinism after all many perhaps be revolutionary. It may lead not to another view about the end, but to a different way of regarding the relative importance of the means. For in the ordinary moral creed those means seem estimated on no rational principle. Our creed appears rather to be an irrational mixture of jarring elements. We have the moral code of Christianity, accepted in part; rejected practically by all save a few fanatics. But we do not realise who in its very principle the Christian ideals is false. And when we reject this code for another and in part a sounder morality, we are in the same condition of blindness and of practical confusion. It is here that Darwinism, with all the tendencies we may group under that name, seems destined to intervene, It will make itself felt, I believe, more and more effectual. It may force on us in some points a correction of our moral views, and a return to a non-Christian and perhaps a Hellenic ideal. I propose to illustrate here these general statements by some remarks on Punishment.

Darwinism, I have said, has not even modified our ideas of the Chief Good. We may take that as the welfare of the community realised in its members. There is, of course, a question as to the meaning to be given to welfare. We may identify that with mere pleasure, or may rather view both as inseparable aspects of perfection and individuality. And the extent and nature of the community would once more be a subject for some discussion. But we are forced to enter on these controversies here. We may leave welfare undefined, and for present purpose need not distinguish the community from the state. The welfare of this whole exists, of course, nowhere outside the individuals, and the individuals again have rights and duties only as members in the whole. This is the revived Hellenism — or we may call it the organic view of thing — urged by German idealism early in the present century.

According to the author, the doctrines of Darwin:

A. have changed our physical and moral principles.
B. have to be re-evaluated to correct the faults endemic in them
C. do not change our moral ideas
D. are actually new versions of old moral rules

## 5.2.31 English Language: CAT 1996 | Question: 71 top

That the doctrines connected with the name of Darwin are altering our principles has become a sort of commonplace thing to say. And moral principles are said to share in this general transformation. Now, to pass by other subjects I do not see why Darwinism need change our ultimate moral ideas. It will not modify our conception of the end, either for the community or the individual, unless we have been holding views which long before Darwin were out of date. As to the principles of ethics I perceive, in short, no sign of revolution. Darwinism has indeed helped many to truer conception of the end, but I cannot admit that it has either originated or modified that conception.

And yet in ethics Darwinism after all many perhaps be revolutionary. It may lead not to another view about the end, but to a different way of regarding the relative importance of the means. For in the ordinary moral creed those means seem estimated on no rational principle. Our creed appears rather to be an irrational mixture of jarring elements. We have the moral code of Christianity, accepted in part; rejected practically by all save a few fanatics. But we do not realise who in its very principle the Christian ideals is false. And when we reject this code for another and in part a sounder morality, we are in the same condition of blindness and of practical confusion. It is here that Darwinism, with all the tendencies we may group under that name, seems destined to intervene, It will make itself felt, I believe, more and more effectual. It may force on us in some points a correction of our moral views, and a return to a non-Christian and perhaps a Hellenic ideal. I propose to illustrate here these general statements by some remarks on Punishment.

Darwinism, I have said, has not even modified our ideas of the Chief Good. We may take that as the welfare of the community realised in its members. There is, of course, a question as to the meaning to be given to welfare. We may identify that with mere pleasure, or may rather view both as inseparable aspects of perfection and individuality. And the extent and nature of the community would once more be a subject for some discussion. But we are forced to enter on these controversies here. We may leave welfare undefined, and for present purpose need not distinguish the community from the state. The welfare of this whole exists, of course, nowhere outside the individuals, and the individuals again have rights and duties only as members in the whole. This is the revived Hellenism — or we may call it the organic view of thing — urged by German idealism early in the present century.

What, according to the passage, is the Chief Good?

A. Being good and kind to all fellow human beings.
B. The greatest good of the greatest number.
C. The welfare of the community realised in its members.
D. Cannot be determined from the passage.

cat1996 english-language passage-reading

## 5.2.32 English Language: CAT 1996 | Question: 72 top

Management education gained new academic stature within US Universities and greater respect from outside during the 1960's and 1970's. Some observers attributed the competitive superiority of US corporations to the quality of business education. In 1978, a management professor, Herbert A. Simon of Carnegie Mellon University, won the Nobel Prize in economics for his work in decision theory. And the popularity of business education continued to grow; since 1960, the number of master's degrees awarded annually has grown from under 5000 to over 50, 000 in the mid 1980's and the MBA has become known as 'the passport to the good life'.

By the 1980s, however, US business schools faced critics who charged that learning had little relevance to real business problems. Some went so far as to blame business schools for the decline in US competitiveness. Amidst the criticism, for distinct arguments may be discerned. The first is that business schools must be either unnecessary or deleterious because Japan does so well without them. Underlying this argument is the idea that management ability cannot be taught; one is either born with it or much acquire it over years of practical experience. A second argument is that business schools are overly academic and theoretical. They teach quantitative models that have little application to real world problems. Third, they give inadequate attention to shop-floor issues, to production processes and to management resources. Finally, it is argued that they encourage undesirable attitudes in students, such as placing value on the short term and bottom line' targets, while neglecting longer term developmental criteria. In summary, some business executives complain that MBAs are incapable of handling day to day

operational decisions, unable to communicate and to motivate people, and unwilling to accept responsibility for following through on implementation plans. We shall analyse these criticisms after having reviewed experiences in other countries.

In contrast to the expansion and development of business education in the United States and more recently in Europe, Japanese business schools graduate no more than two hundred MBAs each year. The Keio Business School (KBS) was the only two year masters programme. The absence of business school in Japan would appear in contradiction with the high priority placed upon learning by its Confucian culture. Confucian colleges taught administrative skills as early as 1630 and Japan wholeheartedly accepted Western learning following the Meiji restoration of 1868 when hundreds of students were despatched to universities in US, Germany, England and France to learn the secrets of western technology and modernisation. Moreover, the Japanese educational system is highly developed and intensely competitive and can be credited for raising the literary and mathematical abilities of the Japanese to the highest level in the world.

Until recently, Japanese corporations have not been interested in using either local or foreign business schools for the development of their future executives. Their in-company, training programme have sought the socialisation of newcomers, the younger the better. The training is highly specific and those who receive it have neither the capacity nor the incentive to quit. The provailing belief, says Imai, management should be born out of experience and many years of effort and not learnt from educational institutions'. A 1960 survey of Japanese senior executives confirmed that a majority (54%) believed that managerial capabilities can be attained only on the job and not in universities.

However, this view seems to be changing: the same survey revealed that even as early as 1960, 37% of senior executives felt that the universities should teach integrated professional management. In the 1980s, a combination of increased competitive pressures and greater multi-nationalisation of Japanese business are making it difficult for many companies to rely solely upon internally trained managers. This has led to a rapid growth of local business programmes and a greater use of American MBA programmes. In $1982-83$, the Japanese comprised the largest single group of foreign students at Wharton. where they not only learnt the latest techniques of financial analysis, but also developed world-wide contracts through their classmates and became Americanised, something highly useful in future negotiations. The Japanese, then do not, do without business school as is sometimes contended. But the process of selecting and orienting new graduates even MBAs into corporations is radically different than in the US. Rather than being placed in highly paying staff positions, new Japanese recruits are assigned responsibility for operational and even menial tasks. Success is based upon Japan's system of highly competitive recruitment and intensive in-company management development, which in turn are grounded in its tradition of universal and rigorous academic education, lifelong employment and strong group identification.

The harmony among these traditional elements has made Japanese industry highly productive and the given corporate leadership a long term view. It is true that this has been achieved without much attention to university business education, but extraordinary attention has been devoted to the development of managerial skills both within the company and through participation in programmes sponsored by the Productivity Centre and other similar organisations.

The 1960's and 1970's can best be described as a period,

A. When quality business education contributed to the superiority of US corporations.
B. When the number of MBAs rose from under 5,000 to over 50,000.
C. When management education gained new academic stature and greater respect.
D. When the MBA became more disreputable.

This has led to a rapid growth of local business programmes and a greater use of American MBA programmes. In 1982 − 83, the Japanese comprised the largest single group of foreign students at Wharton. where they not only learnt the latest techniques of financial analysis, but also developed world-wide contracts through their classmates and became Americanised, something highly useful in future negotiations. The Japanese, then do not, do without business school as is sometimes contended. But the process of selecting and orienting new graduates even MBAs into corporations is radically different than in the US. Rather than being placed in highly paying staff positions, new Japanese recruits are assigned responsibility for operational and even menial tasks. Success is based upon Japan's system of highly competitive recruitment and intensive in-company management development, which in turn are grounded in its tradition of universal and rigorous academic education, lifelong employment and strong group identification.

The harmony among these traditional elements has made Japanese industry highly productive and the given corporate leadership a long term view. It is true that this has been achieved without much attention to university business education, but extraordinary attention has been devoted to the development of managerial skills both within the company and through participation in programmes sponsored by the Productivity Centre and other similar organisations.

A criticism that management education did not face was that

A. it imparted poor quantitative skills to MBAs.
B. it was unnecessary and deleterious.
C. it was irrevocably irrelevant.
D. it inculcated undesirable attitudes in students.

### 5.2.36 English Language: CAT 1996 | Question: 76 top

Management education gained new academic stature within US Universities and greater respect from outside during the 1960's and 1970's. Some observers attributed the competitive superiority of US corporations to the quality of business education. In 1978, a management professor, Herbert A. Simon of Carnegie Mellon University, won the Nobel Prize in economics for his work in decision theory. And the popularity of business education continued to grow; since 1960, the number of master's degrees awarded annually has grown from under 5000 to over 50, 000 in the mid 1980's and the MBA has become known as 'the passport to the good life'.

By the 1980s, however, US business schools faced critics who charged that learning had little relevance to real business problems. Some went so far as to blame business schools for the decline in US competitiveness. Amidst the criticism, for distinct arguments may be discerned. The first is that business schools must be either unnecessary or deleterious because Japan does so well without them. Underlying this argument is the idea that management ability cannot be taught; one is either born with it or much acquire it over years of practical experience. A second argument is that business schools are overly academic and theoretical. They teach quantitative models that have little application to real world problems. Third, they give inadequate attention to shop-floor issues, to production processes and to management resources. Finally, it is argued that they encourage undesirable attitudes in students, such as placing value on the short term and bottom line' targets, while neglecting longer term developmental criteria. In summary, some business executives complain that MBAs are incapable of handling day to day operational decisions, unable to communicate and to motivate people, and unwilling to accept responsibility for following through on implementation plans. We shall analyse these criticisms after having reviewed experiences in other countries.

In contrast to the expansion and development of business education in the United States and more recently in Europe, Japanese business schools graduate no more than two hundred MBAs each year. The Keio Business School (KBS) was the only two year masters programme. The absence of business school in Japan would appear in contradiction with the high priority placed upon learning by its Confucian culture. Confucian colleges taught administrative skills as early as 1630 and Japan wholeheartedly accepted Western learning following the Meiji restoration of 1868 when hundreds of students were despatched to universities in US, Germany, England and France to learn the secrets of western technology and modernisation. Moreover, the Japanese educational system is highly developed and intensely competitive and can be credited for raising the literary and mathematical abilities of the Japanese to the highest level in the world.

Until recently, Japanese corporations have not been interested in using either local or foreign business schools for the development of their future executives. Their in-company, training programme have sought the socialisation of newcomers, the

younger the better. The training is highly specific and those who receive it have neither the capacity nor the incentive to quit. The provailing belief, says Imai, management should be born out of experience and many years of effort and not learnt from educational institutions'. A 1960 survey of Japanese senior executives confirmed that a majority (54%) believed that managerial capabilities can be attained only on the job and not in universities.

However, this view seems to be changing: the same survey revealed that even as early as 1960, 37% of senior executives felt that the universities should teach integrated professional management. In the 1980s, a combination of increased competitive pressures and greater multi-nationalisation of Japanese business are making it difficult for many companies to rely solely upon internally trained managers. This has led to a rapid growth of local business programmes and a greater use of American MBA programmes. In 1982 − 83, the Japanese comprised the largest single group of foreign students at Wharton. where they not only learnt the latest techniques of financial analysis, but also developed world-wide contracts through their classmates and became Americanised, something highly useful in future negotiations. The Japanese, then do not, do without business school as is sometimes contended. ## 5.2.40 English Language: CAT 1996 | Question: 80 top

For researchers interested in the working of the subatomic and astrophysical realms, soup is on the menu. This is no ordinary soup, however, but a seething mass of elementary particles called quarks and gluons. The whole universe is thought to have consisted of just such a soup of few millionths of second after the Big Bang that began everything. And today the soup is being sought by two groups of physicists, one of lot of which is attempting to recreate it on earth using particle colliders, while the other lot searches for it In the sky, buried in the cores of dead stars.

Both groups have reported progress, though neither has yet produced conclusive results. But definite identification of "quark matter" would have profound implications. For particle physicists, the search for such a soup provides a way of testing one of their most fundamental theories: that of quantum chromodnamics (QCD). Among astrophysicists, meanwhile, some theorists have suggested that in certain circumstances quark matter could form a stable sort of super-dense material which if its existence could be proven would literally be the strangest stuff in the universe.

The recipe for making your own quark soup from scratch goes something like this. First, take some atoms of lead. Unreel them and discard the electrons, leaving just the nuclei. Put the nuclei into a particle accelerator, spin up to almost the speed of light and heat by slamming into a target made of more lead atoms, so that they reach a temperature 100, 000 times hotter than the centre of the sun. At this temperature, something rather unusual is thought to happen

Atom nuclei are bundles of protons and neutrons which, along with electrons, are the basis of normal, modern matter. But protons and neutrons are themselves made up of more fundamental particles called quarks, bound together by 'glue" particles called (for obvious reasons) gluons. Quarks come in several varieties: a proton, for instance, consists of two "up" quarks and a "down" quark, while a neutron consists of two downs and an up. The theory of QCD makes predictions about the way quarks and gluons should behave.

Normally, the laws of subatomic physics dictate that individual quarks are never seen in the wild; they always travel around in twos or threes. At sufficiently high temperatures, however — such as those reached in a high-energy particle collider protons and neutrons are thought to disintegrate into a soup, or plasma, of individual quarks and gluons, before cooling and recombining into ordinary matter.

That is what QCD predicts. So, since 1994, an international team of researchers at CERN, the European laboratory for particle physics in Geneva, has been smashing lead nuclei together and then combing through the hail of subatomic particles that results from these collisions to look for evidence of quark-gluon plasma.

This is hard, because physicists can directly detect only particles that escape from the fireball and reach their instruments — and these particles are likely to have undergone several transmutations in their short lives. But by working backwards it is possible to discern the processes that led to the formation of the observed particles. For example, interactions between free quarks and gluons, as opposed to ordinary matter, should cause more of some types of exotic particle to be produced, and fewer of other kinds. Careful analysis of the rations of particles churned out in thousands of collisions should thus determine whether a quarkgluon plasma was made or not.

CERN researchers have announced that analysis of the results of seven separate types of collision collectively provided evidence of the creation, for the first time, of just such a soup. For a fraction of a second they had, in other words, recreated the conditions that prevailed just after the Big Bang. Admittedly, this declaration of victory came with several provisos. Ulrich Heinz, a theoretical physicist at CERN, says that more experiments at higher energies will be needed to verify the result. But, having cranked up their accelerators to achieve the most energetic collisions possible the CERN team can go no further. So the announcement also signalled a passing of the torch to the new Relativistic Heavy Ion Collider at the Brookhaven National

Laboratory on Long Island, New York, which will start an experimental programme at higher energies later.

According to the passage, what is said to have began the universe?

A. Quarks and gluons
B. the theory of QCD
C. The Big Bang
D. None of these

### 5.2.43 English Language: CAT 1996 | Question: 83 top

For researchers interested in the working of the subatomic and astrophysical realms, soup is on the menu. This is no ordinary soup, however, but a seething mass of elementary particles called quarks and gluons. The whole universe is thought to have consisted of just such a soup of few millionths of second after the Big Bang that began everything. And today the soup is being sought by two groups of physicists, one of lot of which is attempting to recreate it on earth using particle colliders, while the other lot searches for it In the sky, buried in the cores of dead stars.

Both groups have reported progress, though neither has yet produced conclusive results. But definite identification of "quark matter" would have profound implications. For particle physicists, the search for such a soup provides a way of testing one of their most fundamental theories: that of quantum chromodnamics (QCD). Among astrophysicists, meanwhile, some theorists have suggested that in certain circumstances quark matter could form a stable sort of super-dense material which if its existence could be proven would literally be the strangest stuff in the universe.

The recipe for making your own quark soup from scratch goes something like this. First, take some atoms of lead. Unreel them and discard the electrons, leaving just the nuclei. Put the nuclei into a particle accelerator, spin up to almost the speed of light and heat by slamming into a target made of more lead atoms, so that they reach a temperature 100, 000 times hotter than the centre of the sun. At this temperature, something rather unusual is thought to happen

Atom nuclei are bundles of protons and neutrons which, along with electrons, are the basis of normal, modern matter. But protons and neutrons are themselves made up of more fundamental particles called quarks, bound together by 'glue" particles

called (for obvious reasons) gluons. Quarks come in several varieties: a proton, for instance, consists of two “up” quarks and a “down” quark, while a neutron consists of two downs and an up. The theory of QCD makes predictions about the way quarks and gluons should behave.

Normally, the laws of subatomic physics dictate that individual quarks are never seen in the wild; they always travel around in twos or threes. At sufficiently high temperatures, however — such as those reached in a high-energy particle collider protons and neutrons are thought to disintegrate into a soup, or plasma, of individual quarks and gluons, before cooling and recombining into ordinary matter.

That is what QCD predicts. So, since 1994, an international team of researchers at CERN, the European laboratory for particle physics in Geneva, has been smashing lead nuclei together and then combing through the hail of subatomic particles that results from these collisions to look for evidence of quark-gluon plasma.

This is hard, because physicists can directly detect only particles that escape from the fireball and reach their instruments — and these particles are likely to have undergone several transmutations in their short lives. But by working backwards it is possible to discern the processes that led to the formation of the observed particles. For example, interactions between free quarks and gluons, as opposed to ordinary matter, should cause more of some types of exotic particle to be produced, and fewer of other kinds. Careful analysis of the rations of particles churned out in thousands of collisions should thus determine whether a quarkgluon plasma was made or not.

CERN researchers have announced that analysis of the results of seven separate types of collision collectively provided evidence of the creation, for the first time, of just such a soup. For a fraction of a second they had, in other words, recreated the conditions that prevailed just after the Big Bang. Admittedly, this declaration of victory came with several provisos. Ulrich Heinz, a theoretical physicist at CERN, says that more experiments at higher energies will be needed to verify the result. But, having cranked up their accelerators to achieve the most energetic collisions possible the CERN team can go no further. So the announcement also signalled a passing of the torch to the new Relativistic Heavy Ion Collider at the Brookhaven National Laboratory on Long Island, New York, which will start an experimental programme at higher energies later.

What is the ideal method to determine whether quarkgluon plasma was made or not?

A. careful analyse is of the ratios of particles churned out
B. smashing load nuclei together and then combing through the hail of subatomic particles.
C. working backwards
D. none of the above
